

Potential Aggregate Resources Linn County, Iowa

LEGEND

Potential Surficial Aggregate Sources

- Sand and gravel >4 meters (13') thick
- Sand and gravel >4 meters (13') thick with 2 - 4 meters (7 - 13') of overburden
- Sand and gravel <4 meters (13') thick
- Fine to medium sand >4 meters (13') thick

Potential Bedrock Aggregate Sources

- Limestones and dolostones within 8 meters (25 ft.) of land surface; Silurian and Devonian age; may include thin, interbedded shales. Crushed stone aggregate quality varies with specific rock units, depth and location.

Permitted Mineral Production Sites
