

## News & Updates

### Cyber-Attacks By the Numbers

Cybersecurity statistics give readers a better idea of the current state of overall security. We want to share a few findings from *60 Must-Know Cybersecurity Statistics for 2019*, published by Varonis.

- In 2016, 3 billion Yahoo accounts were hacked in one of the biggest breaches of all time.
- According to 2017 statistics, there are over 130 large-scale, targeted breaches in the U.S. per year, and that number is growing by 27 percent per year.
- The average cost per lost or stolen records per individual is \$141 — but that cost varies per country. Breaches are most expensive in the United States (\$225) and Canada (\$190).
- Malware and web-based attacks are the two most costly attack types — companies spent an average of US \$2.4 million in defense.

### FCC Seeks Comments for E-rate Modifications

The Federal Communications Commission (FCC) released a Notice of Proposed Rulemaking that proposes to make the Category Two budget approach permanent, and also seeks comment on potential modifications that could simplify the budgets, decrease the administrative burden of applying for Category Two services, and thereby speed the deployment of Wi-Fi in schools and libraries across the country.

Questions about commenting should be referred to [Pam Jacobs](#), Iowa Department of Education.

### A New Broadband Law

On July 1, 2019, a new broadband law went into effect. The "Empower Rural Iowa Act" is aimed at growing opportunities in rural parts of the state by expanding grants to boost broadband. The following article from *We Are Iowa*, explains the importance of broadband in rural Iowa.
