## To the Citizens of Iowa

We are pleased to present our 15th Annual Condition of Education Report to the citizens of Iowa as a comprehensive resource to help guide understanding and planning for the state's system of prekindergarten, elementary, and secondary education. This report includes all the information from our "State Report Card for No Child Left Behind," as well as a wide range of supplemental data such as demographics, various achievement indicators, teacher qualifications, and financial details so that readers have a more complete context in which to evaluate how well Iowa schools are meeting the needs of our children.

You will note that our students, schools and educators rate above national averages according to many of the indicators - including student test scores, college preparedness, graduation rates, health and safety, and teacher quality. At the same time, we recognize that we must maintain our commitment to continuous improvement for all students at all stages within the educational system, with particular focus on reducing the achievement and skills gaps among our students who may be struggling to learn, and supporting teachers with better salaries and professional growth opportunities.

These improvements will require considerable investment from state funding, as well as ongoing collaboration and cooperation among community leaders, educators, and parents. Our obligation is to assure we are providing the educational services necessary for every student to reach their highest potential.

I hope you find this report a rich resource, an accountability tool, and a source of benchmarks and indicators to help you be a part of the improvement process.

Judy Jeffrey
Interim Director, Department of Education

## Dedication

This $15^{\text {th }}$ edition of the Annual Condition of Education Report is dedicated to Ted Stilwill, who served as Director of the Iowa Department of Education for eight years until his recent retirement in August 2004.

As Director, Stilwill helped guide the expansion of the contents of this report over the years to ensure that it served as a timely and factual resource for policymakers, community leaders, parents and educators alike. Of special interest to him was reporting student achievement information and reporting achievement results by subpopulations. Also of importance was presenting background information, which provided a social, demographic, and economic context in which education was being provided in Iowa.

Director Stilwill used information in the Condition of Education Report to help keep the public informed, a key factor to maintaining the quality of education for which Iowa is known. He championed quality student assessments and school accountability, while focusing on investments in teacher quality as the most influential way to improve student achievement. Throughout the year, he used the document as a resource and ready reference.

With this dedication, we would like to acknowledge his leadership and support for each Condition of Education Report and for demonstrating how information can be used to improve education in Iowa.

## Acknowledgments

## Background Demographics

## Introduction to Background Demographics

The background demographic information reported in the Annual Condition of Education Report reviews changes and trends that have occurred over time. This information has been included in the Report for eight years and provides comparisons between Iowa, the nation, and other states. This section provides data on social, economic, population and demographics statistics that help analyze the condition of education in Iowa.

The background demographics section presents data in the following three categories:

- Population and Demographics-includes information pertaining to total population, birth rates, migration, and age for the state, individual counties, surrounding states, and the nation.
- Economic-includes data pertaining to income by individual county and gross state product.
- Social-includes characteristics and information on poverty levels, educational attainment and earning levels, and out-of-wedlock births.

The information presented in the background demographics section is obtained from a variety of sources and each source is displayed. Information in this section is the most recent available at the time of publication.

## Population andDemographics

## Population Change

## Figure 1B - Population Change for Midwest States

 1990 то 2000
U.S. $13.2 \%$

Source: U.S. Census Bureau, Census 1990 and Census 2000, Population and Housing Unit Counts, United States (2000 CPH-2-1).

- The U.S. population increased by 13.2 percent over the last ten years, significantly higher than the 9.8 percent growth rate reported for the period from 1980 to 1990.
- Iowa experienced a 5.4 percent population growth rate in the past decade, outpacing the estimated rate of 3.3 percent from 1990-1999 and recovering from the loss of 4.7 percent of the population between 1980 and 1990.
- The largest increases in population were in the south and west, with Nevada and Arizona growing at three times the national rate.
- The midwest population grew more slowly than the nation as a whole, with North Dakota and Iowa trailing neighboring states.

## Population andDemographics

## Population Change

Figure 2B - Population Change for Midwest States April 1, 2000 to July 1, 2003

Source: U.S. Census Bureau, Population Estimates Branch, 7/1/2003 National and State Population Estimates.

- North Dakota was the only state in the nation to show a decline in population from April 2000 to July 2003.
- Iowa showed little growth, 0.6 percent, during the same period and tied for $4^{\text {th }}$ lowest in the nation.
- Nevada showed the largest increase at 12.2 percent.
- The nation grew at 3.3 percent from April 2000 to July 2003.

## Population and Demographics

## Iowa Population Change

Figure 3B - Iowa Population Change by County 1990-2000

Source: U.S. Census Bureau, Census 1990 and Census 2000.

- Iowa's 5.4 percent growth in population from 1990 to 2000 was concentrated in and around metropolitan areas. Almost 25 percent of the state's population resides in just four counties: Dallas, Johnson, Linn, and Polk.
- Dallas County posted the greatest gains in population, increasing by 37 percent over the last ten years. Pocahontas County experienced the largest decline, a loss of 9.1 percent of its citizens during the same period.
- The most populous county in the state is Polk County, which reported a growth rate of 14.5 percent in the decade of the nineties.
- Twenty-two of Iowa's 99 counties grew at or above the state rate of 5.4 percent, with nearly half of those posting double-digit increases. Forty-five counties reported declines in population since 1990.

## Population and Demographics

## Iowa Population Change

Figure 4B - Iowa Population Change by County April 2000 - July 2003

Source: U.S. Census Bureau, Population Estimates Branch, 7/1/2003 National and State Population and Estimates.

- Thirty counties showed increases in population from April 2000 to July 2003, two counties remained unchanged and 67 counties declined in population.
- Dallas County increased in population for the $13^{\text {th }}$ year in a row and showed the largest increase from April 2000 to July 2003 at 13.2 percent.
- Sac County showed the largest decrease in population during the same period at (-5.7) percent.

## Population and Demographics

## Aging

Figure 5B - Percent of Population Age 65 and Older by Midwest States, 2003

Source: U.S. Census Bureau, Population Division, 7/1/2003 State Population Estimates File.

- The percent of population 65 and older in the midwest was relatively unchanged from 2002 to 2003 with only two states showing a change, Kansas and South Dakota.
- Iowa's population 65 and older remained unchanged at 14.7 percent.
- Nationally 12.4 percent of the population was 65 and older in 2003.
- Florida showed the highest percentage 65 and older at 17.0 percent and Alaska the lowest at 6.3 percent.

## Population and Demographics

Birth Rates

Figure 6B - Births Per Thousand Population for Midwest States, 2000 and 2002

Source: Centers for Disease Control and Prevention, National Center for Health Statistics, "National Vital Statistics Reports", Vol. 52, Number 10, 12-17-2003 and Vol. 51, No. 12, 8-4-2003.
Note: The 2000 birth rates were revised based on population estimates using 2000 Census population.

- Birth rates increased for three states, Nebraska, South and North Dakota, from 2000 to 2002 with South Dakota showing the biggest increase.
- Nationally the birth rate decreased from 14.4 in 2000 to 13.9 in 2002.
- Iowa followed the national trend with a declining birth rate from 2000 to 2002.
- Utah showed the highest birth rate in 2002 at 21.2 and Vermont the lowest at 10.4.

## Population and Demographics

## Iowa Births

Figure 7B - Births Per Thousand Population Iowa by County 2002

Source: Iowa Department of Public Health, Center for Health Statistics, "Vital Statistics of lowa 2002", Table 45 A Birth Rate (Per 1,000 Population) 1990-2002.

- Louisa County experienced the highest birth rate for the state in 2002 at 16.3.
- $\quad$ Sac (8.1), Audubon (7.2) and Worth (8.6) Counties showed the lowest birth rates for the state in 2002.
- Shelby County experienced the largest growth from 2001 to 2002. In 2001, Shelby County experienced a rate of 8.7 and in 2002 a rate of 12.1.

## Population and Demographics

Households with Individuals Under Age 18

Figure 8B - Households with Individuals Under 18 Years of Age 2000

Source: U.S. Census Bureau, Census 2000.

- Warren County had the highest percentage of households with persons under 18 (39.9 percent).
- Dickinson County had the lowest percentage of households with persons under 18 (27.3 percent).
- Statewide 33.3 percent of Iowa's households had persons under 18.
- Nationally 36.0 percent of households had persons under 18.

## Population and Demographics

## Iowa Immigrants

Figure 9B - Proportion of International Immigration to lowa by Country of Origin ( 50 or More Immigrants)

1996 AND 2000 то 2002

Source: U.S. Department of Homeland Security, Bureau of Citizenship and Immigration Services, "2002 Yearbook of Immigration Statistics", "2001 Statistical Yearbook of the Immigration and Naturalization Service," "2000 Statistical Yearbook of the Immigration and Naturalization Service," "1996 Statistical Yearbook of the Immigration and Naturalization Service."

- Immigrants to Iowa continued to grow in 2002 reaching a 15 year high of 5,591.
- Immigrants from Bosnia made up the largest group coming to Iowa in 2002 followed by immigrants from Mexico.
- Immigrants from Croatia and Sudan were two new groups reported for Iowa in 2002.

## Population and Demographics

Migration

Source: U.S. Census Bureau, Population Division, State Population Estimates and Estimated Components of Change, July 1, 2003.

- Net international migration is the difference between immigration to an area and emigration from the same area during a time period. Immigration and emigration consist of moves where either the origin or the destination is outside of the United States (not including Puerto Rico). Net international migration includes: (1) net foreign-born international migration, (2) net movement to/ fromPuerto Rico, (3) net movement of federal and civilian citizens, and (4) native-born emigration.
- All states showed positive net international migration for 2003 but the level declined for all states from the 2002 level.
- Iowa continued to rank $30^{\text {th }}$ in the nation in net international migration. California ranked $1^{\text {st }}$ and Montana ranked $50^{\text {th }}$.

## Economics

## Iowa Gross State Product

Figure 11B - Iowa Gross State Product by Industry 2000 and 2001

Source: U.S. Department of Commerce, Bureau of Economic Analysis, Gross State Product 2000 \& 2001. Note: F.I.R.E. - Finance, Insurance and Real Estate.

- Iowa's gross state product increased 1.4 percent from 2000 to 2001.
- Manufacturing continued to make up the largest share of the gross state product in 2001 but was down 4.1 percent from 2000.
- Agriculture, F.I.R.E. and wholesale trade also declined from 2000 in total dollars.
- Data for Iowa Gross State Product by Industry for 2002 will not be available until December 2004.

## Economics

## Per Capita Income

## Figure 12B - Per Capita Personal Income by County 2002

Source: U.S. Department of Commerce, Bureau of Economic Analysis, Regional Economic Accounts, Local Area Personal Income.
Note: Per capita personal income incorporates the results of the comprehensive revision to the national income and products accounts released December 10, 2003.

- Per capita personal income increased for all but six Iowa counties (Benton, Delaware, Franklin, Lyon, Osceola, and Palo Alto) in 2002.
- The number of counties with per capita personal income of $\$ 30,000$ or higher increased in 2002 to eight (Dallas, Dickinson, Iowa, Johnson, Linn, Mills, Polk, and Scott).
- Only one county, Decatur, showed per capita pesonal income below \$20,000 for 2002.

## Social

## Children Poverty - States

Figure 13B - Chldren Under 18 at or Below 200 Percent of Poverty Threshold Midwest States 2002

U.S. 38.3

Source: U.S. Census Bureau, Current Populations Survey, Annual Demographics Survey, March Supplement 2003.

Notes: 200 percent of poverty level is double the income for a poverty threshold. The poverty threshold varies by family size. In 2001, a family of four (parents plus two children) with an income of $\$ 18,859$ or lower would be in poverty.

- Of the midwest states, Minnesota showed the lowest percentage ( 24.5 percent) of children at or below 200 percent of poverty and Iowa tied for $4^{\text {th }}$ lowest at 33.1 percent.
- Nationally 38.3 percent of children were at or below 200 percent of poverty.
- New Hampshire experienced the lowest percentage ( 20.0 percent) in the nation and Arkansas the highest percentage ( 51.8 percent).

Education and Earnings

Figure 14B - United States Average Annual Earnings of Full-time Workers 25 to 64 Years Old and by Educational Attainment 2002

[^0]- Workers without a high school diploma continued to report the lowest average annual earnings in 2002 and lost ground compared to 2001.
- Workers with a professional degree continued to report the highest annual earnings for 2002 and showed the largest increase from 2001 to 2002.
- Workers with a master's degree declined slightly in 2002 compared to 2001.

## Social

## Educational Attainment

## Table 1B - Educational Attainment <br> Population 25 Years and Older Midewest States 2003

|  | Completed <br> High School <br> or Higher | Bachelor's <br> Degree <br> or Higher | High School <br> Midwest Rank | High School <br> National Rank |
| :--- | :---: | :---: | :---: | :---: |

| United States | 91.6 | 32.7 | 1 | 2 |
| Minnesota | 90.8 | 26.8 | 2 | 4 |
| Nebraska | $\mathbf{8 9 . 7}$ | $\mathbf{2 4 . 6}$ | $\mathbf{3}$ | $\mathbf{7}$ |
| Iowa | 89.7 | 25.2 | 3 | 7 |
| North Dakota | 88.7 | 23.9 | 5 | 12 |
| South Dakota | 88.6 | 31.0 | 6 | 15 |
| Kansas | 88.6 | 24.1 | 6 | 15 |
| Wisconsin | 88.3 | 26.6 | 8 | 18 |
| Missouri | 85.9 | 28.1 | 9 | 31 |
| Illinois |  |  |  |  |

Source: U.S. Census Bureau, Current Population Report, P20-550.

- Minnesota ranked $2^{\text {nd }}$ in the nation in the percentage of population 25 and older completing high school. New Hampshire was $1^{\text {st }}$ in the nation at 92.1 percent.
- As in 2002, Texas showed the lowest percentage in the nation for 2003 at 77.2.
- Iowa's percentage of population 25 years and older completing high school increased slighly in 2003 to 89.7 percent.

## Social

## Eligible for Free or Reduced Price Meals

Figure 15B - Percent of lowa Public School PK-12 Students
Eligible for Free or Reduced Price Meals
1993-1994 то 2003-2004

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Free and Reduced Price Meal Eligibility Files.

- The percentage of students eligible for free or reduced price meals grew for the second year in a row in 2003-2004 reaching a 14 year high of 30.0 percent.
- Over 150 districts reported more than 30.0 percent of their students eligible for free or reduced price meals.
- District percentages ranged from 5.5 percent to 64.2 percent of students eligible for free or reduced price meals in Iowa.

## Eligible for Free or Reduced Price Meals

Table 2B - Percent of lowa Public School PK-12 Students<br>Eligible for Free or Reduced Price Meals<br>by Enrollment Category<br>2002-2003 то 2003-2004

| Enrollment <br> Category | $2002-2003$ <br> Number | $2002-2003$ <br> Percent | $2003-2004$ <br> Number | $2003-2004$ <br> Percent |
| :--- | :---: | :---: | :---: | :---: |
| $<250$ | 1,819 | $37.4 \%$ | 1,610 | $38.0 \%$ |

| $7,500+$ | 48,474 | 37.7 | 51,589 | 40.0 |
| State | 137,414 | 28.5 | 144,231 | 30.0 |

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Free and Reduced Price Meal Eligibility Files.
Notes: Enrollment categories are based on certified enrollments. Percentages are based on dividing the number of PK-12 students eligible for free or reduced price meals by the PK-12 Basic Educational Data Survey enrollment.

- The number of students eligible for free or reduced price meals increased for all enrollment categories in 2003-2004 with the exception of the <250 category. However, all enrollment categories had an increase in the percentage eligible for free or reduced price meals.
- The 1,000-2,499 enrollment category experienced the biggest percentage increase in the number of students eligible for 2003-2004.

## Social

## Eligible for Free or Reduced Price Meals

Figure 16B - Percent of lowa Public School PK-12 Students Eligible for Free or Reduced Price Meals by County 2003-2004

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Free and Reduced Price Meal Eligibility File 2004.

- Twelve counties (Taylor, Ringgold, Decatur, Wayne, Appanoose, Clarke, Lee, Louisa, Crawford, Buena Vista, Black Hawk, and Marshall) reported 40.0 percent or more of their students eligible for free or reduced price meals.
- Decatur County reported the highest percentage ( 46.9 percent) of students eligible in 2003-2004 and Warren County the lowest (15.8).

## Working Parents

Table 3B - Children 6-17 in Families with Working Parents 2002

| State/Nation | Percent of Children | Midwest Rank |
| :--- | :---: | :---: |
| United States | $\mathbf{6 9 . 4 \%}$ | - |
| South Dakota | 79.9 | 1 |
| Minnesota | 77.8 | 2 |
| Kansas | 77.1 | 3 |
| Iowa | $\mathbf{7 7 . 0}$ | $\mathbf{4}$ |
| North Dakota | 76.7 | 5 |
| Wisconsin | 76.2 | 6 |
| Nebraska | 75.3 | 7 |
| Missouri | 73.2 | 8 |
| Illinois | 71.1 | 9 |

Source: U.S. Census Bureau, 2002 American Community Survey, Summary Table P063.
Note: Children with working parents include children in two parent families where both parents are in the labor force plus children in one parent families where the parent is in the labor force.

- Iowa ranked $4^{\text {th }}$ in the midwest in the percentage of children in families with working parents.
- South Dakota reported the highest percentage, 79.9 percent of working parents for the midwest and the nation in 2002 and West Virginia reported the lowest, 62.9 percent.

## Social

## Out-of-Wedlock Births

Figure 17B - Iowa, Out-of-Wedlock Births for 15-19 Year Olds as a Percentage of Total Out-of-Wedlock Births 1980 то 2002

Source: Iowa Department of Public Health, Center for Health Statistics, Vital Statistics of Iowa 2002.

- Iowa total number of out-of-wedlock births increased from 4,895 in 1980 to 11,020 in 2002.
- The number of out-of-wedlock births to mothers ages 15-19 increased from 2,227 to 2,904 during the same period.
- Out-of-wedlock births to mothers ages $15-19$, as a percentage of total out-ofwedlock births, decreased from 1980 to 2002 going from 45.5 percent to 26.4 percent.

## Introduction to Grades PK-12

The Annual Condition of Education Report provides detailed information on a variety of aspects of Prekindergarten (PK) through $12^{\text {th }}$ grade for Iowa public and nonpublic schools. Data presented in each section reflects the most current information at the time of publication. In most cases, data is displayed for the 2003-2004 school year when available.

Iowa schools served 522,254 students in 1,491 public and 200 accredited nonpublic schools. Other highlights of the Enrollment Chapter include:

- Iowa's 370 public school districts operated 364 high schools, 801 elementary schools, 230 middle schools, and 41 junior high schools.
- Of the 370 school districts, 24 sent their high school students to another district in 2003-2004.
- Of the 364 high schools, 141 had less than 200 students in 2003-2004.
- The total number of PK-12 public and nonpublic English language learner students increased for the $16^{\text {th }}$ consecutive year.
- The trend of the number of open enrolled students continued to increase, moving to 4.5 percent of the total certified enrollment in 2003-2004.
- Special education enrollment as a percentage of certified enrollment continued to increase in 2003-2004.

In 2003-2004, schools reported there were 33,688 full-time teachers serving public school districts and area education agencies (AEAs) and 2,401 full-time teachers serving nonpublic schools. Other information in the Staff Chapter includes:

- The average salary for public full-time teachers was $\$ 39,432$ while the national average for public school teachers was estimated at $\$ 46,826$ in 2003-2004.
- There were 1,256 beginning full-time public school teachers with an average salary of \$27,692.
- There were 1,069 public school full-time principals with an average salary of \$70,097.
- There were 332 full-time superintendents with an average salary of \$90,613.
- There were 12 AEAs that had 2,300 full-time staff that provided support in emerging education practices, planning, professional development, media and technology services.
- Iowa's pupil-teacher ratio was 15.2 to 1 .

In 2003-2004, almost 40 percent of the districts reported either an organizational structure of K-5, 68, and 9-12 or PK-5, 6-8, 9-12. Other data in the Program Chapter includes:

- Average class size increased for all grades K-3 between 2002-2003 and 2003-2004.
- In 2002-2003, hardware and software per pupil expenditures continued to decrease and were $\$ 56.59$, the lowest per pupil amount since 1994-1995.
- There were 3.7 pupils per computer in 2003-2004, the same amount as the previous year and the lowest amount since this data was collected.
- All 370 school districts will participate in Project EASIER and submit data electronically for the BEDS data collection by the fall of 2004.
- Over 95 percent of the school districts (351 districts) offered all-day, everyday, two semester kindergarten programs in 2003-2004.

State indicators of student success are provided in the Student Performance Chapter. Indicators include:

- For the 2002-2004 biennium, 76.7 percent of $4^{\text {th }}$ graders performed at or above proficiency on ITBS reading comprehension and 76.8 percent performed at or above proficiency on ITBS mathematics.
- For the 2002-2004 biennium, 69.4 percent of $8^{\text {th }}$ graders performed at or above proficiency on ITBS reading comprehension, 72.2 percent performed at or above proficiency on ITBS mathematics, and 78.0 percent performed at or above proficiency in ITBS science.
- For the 2002-2004 biennium, 76.8 percent of $11^{\text {th }}$ graders performed at or above proficiency on ITED reading comprehension, 78.6 percent performed at or above proficiency on ITED mathematics, and 79.0 percent performed at or above proficiency on ITED science.
- In 2002-2003, the grade 7-12 dropout rate was at 1.34, the lowest rate since the data has been reported.
- Both female (1.13) and male (1.53) dropout rates were at an all time low in 2002-2003.
- Dropout rates for the race/ethnicity categories all decreased from 2001-2002.
- The 2002-2003 Iowa public school graduation rate was 90.4 percent, the highest for all years this data has been collected.
- The percent of Iowa public school graduating seniors that are pursuing or intending to pursue postsecondary education or training increased to 83.5 percent in 2003-2004.
- The percent of Iowa ACT participants that achieved an average composite ACT score of 20 or above was 69.5 percent.
- The percentage of Iowa ACT participants that completed a core high school program remained at 66.0 percent for the $6^{\text {th }}$ straight year in 2003-2004.
- In 2003-2004, 66 of the 1,491 public schools ( 4.4 percent) and 9 of 370 school districts were determined to be in need of assistance under the No Child Left Behind guidelines for Iowa.

Data on public school district expenditures and revenues is provided in the Finance Chapter. The total Iowa elementary and secondary school district budget was estimated at $\$ 3.639$ billion in 2004-2005. Other information found in the Finance Chapter includes:

- Salaries and benefits were approximately 82 percent of the total object category expenditures in 2002-2003.
- Local taxes accounted for nearly 34 percent of total general fund revenues in 2002-2003.
- Iowa average taxable valuation per pupil decreased 2.5 percent in 2004-2005 to $\$ 203,438$.
- In 2002-2003, Iowa ranked $36^{\text {th }}$ in average general fund expenditure per pupil at $\$ 6,974$.
- The average school district general fund levy was approximately $\$ 12.19$ per $\$ 1,000$ of taxable valuation in 2004-2005.
- Of the 99 counties in Iowa, 90 ( 90.9 percent) had enacted a local option sales and services tax for school infrastructure as of June 30, 2004.

Educational data by district, including enrollment, free and reduced price lunch, dropouts, and graduates, are available at the Iowa Department of Education web site at:
http://www.state.ia.us/educate/fis/pre/eddata/index.html

## Enrollment

Information pertaining to state enrollment totals as well as by district enrollment categories are summarized in the Enrollment section. Data presented in this section are collected from the Basic Educational Data Survey (BEDS), certified enrollment, the National Center for Education Statistics (NCES), and Special Education counts. Analysis in this section includes enrollment trends, enrollment changes for the nation, distribution of public school students and districts, enrollment distribution by area education agencies and counties, racial/ethnic distribution of students, information pertaining to English Language Learners (ELL), open enrollment, and special education enrollment.

## Enrollment Trends

The downtrend in K-12 enrollments continued for both public and nonpublic schools in 2003-2004. Table 1and Figure 1 show that public K-12 enrollment decreased 2,010 (-0.4 percent) between 20022003 and 2003-2004, and that was the seventh consecutive year of a declining enrollment. The 19721973 school year had the historical high in public school K-12 enrollment of 645,000.

Table 1
Iowa Public and Nonpublic School K-12 Enrollments 1972-1973 and 1985-1986 то 2003-2004

| Year | Public | Nonpublic | Combined <br> Total | Combined Total <br> Change From <br> Previous Year |
| :---: | :---: | :---: | :---: | :---: |
| $1972-1973$ | 645,000 | 66,000 | 711,000 |  |

## Iowa Public School K-12 Enrollments 1985-1986 то 2003-2004

Source: Iowa Department of Education, Division of Financial and Information Services, Certified Enrollment Files.

Nonpublic K-12 enrollments also continued to decline. In the 2003-2004 school year, nonpublic enrollment K-12 decreased by 1,755 students ( -4.5 percent), continuing the downward trend shown in Table 1 and Figure 2. The last increase in nonpublic enrollment occurred during 1993-1994.

Figure 2
Iowa Nonpublic School K-12 Enrollments 1985-1986 то 2003-2004

[^2]Table 2 displays information on public school enrollments by grade level for 1985-1986, 2002-2003 and 2003-2004. Kindergarten enrollments had the largest increase of all grades between 2003-2004 and 20022003. Nine of the 13 grade levels increased between 2002-2003 and 2003-2004. Kindergarten enrollments decreased 13.8 percent between 1985-1986 and 2003-2004.

Note: $\quad$ *Other refers primarily to special education students not associated with a given grade level. This is not a count of the number of special education students in the state.

The number of outgoing $12^{\text {th }}$ graders has exceeded the number of incoming kindergartners for seven consecutive years, although the gap decreased in 2003-2004. Figure 3 shows the number of $12^{\text {th }}$ graders compared to the number of kindergartners in public schools for the years 1993 to 2004. This information can provide an indication of the enrollment trends.

Figure 3

Among states in the region, Illinois had the largest public K-12 enrollment and the largest percentage increase in enrollment between 1991 and 2001 at 11.9 percent (see Table 3 and Figure 4 ). All states listed had enrollment increases between 1991 and 2001 below the national average ( 13.1 percent). Of the states listed, three states, including Iowa, had enrollment decreases between the years shown.

Table 4 presents public school enrollment projections by grade level. Projections through the 20082009 school year show a continuation of a downward trend that started in the 1996-1997 school year (see Table 1). Projections indicate that grade 12 enrollments will continue to be larger than kindergarten enrollments, continuing the trend displayed in Figure 3.

Table 4

## Iowa Public School Enrounient Projections by Grade Level 2004-2005 то 2008-2009

| Grade |  |  |  |  |  |

Source: lowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Enrollment Files, and Public School Enrollment Projections.
Notes: All enrollments are as of the third Friday in September. The public school enrollment projections are based upon trends observed in the number of students moving from grade to grade. The trend, calculated as an average cohort survival ratio, was used to estimate enrollments for first through twelfth grade. Kindergarten enrollments were estimated from an average ratio of kindergarten enrollments to cohorts born five years prior.
*Other refers primarily to special education students not associated with a given grade level.
This is not a count of the number of special education students in the state.

Table 6 provides information on Iowa nonpublic school K-12 historical and projected enrollments. Total enrollments have decreased for each year shown and projections estimate that the trend will continue. The nonpublic enrollment decreased 16.8 percent between 1994-1995 and 2003-2004. The projections estimate that between 2003-2004 and 2008-2009, nonpublic enrollment will decrease another 10.0 percent.

Table 6

## Iowa Nonpublic School K-12 Enrollments for 1994-1995 through 2003-2004 and Projected Enrollments For 2004-2005 through 2008-2009

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Enrollment Files and Nonpublic School Enrollment Projections.
Notes: All enrollments are as of the third Friday in September. The nonpublic school enrollment projections are based upon trends observed in the number of students moving from grade to grade. The trend, calculated as an average cohort survival ratio, was used to estimate enrollments for first through twelfth grade. Kindergarten enrollments were estimated from an average ratio of kindergarten enrollments to cohorts born five years prior.

## Enrollment Changes for the Nation

Iowa, along with most of the midwest states, experienced a decrease in public enrollments between 1996 and 2001 (Figure 5). Of the midwest states, only Illinois and Kansas had an increase in public enrollments in the years shown. Nationally, five states had an increase in public enrollments greater than 10.0 percent (Nevada, Arizona, Colorado, New Jersey, and Florida).

## Distribution of Public School Students and Districts

Table 7 and Figures 6 and 7 detail the change in the number of school districts since 1950. Between 1950 and 1970, the number of school districts decreased from 4,652 to 453 a 90.3 percent decrease. The decrease between 1965 and 1970 was due to an Iowa law change, which required all operating districts to provide K-12 programs.

The number of public school districts decreased by one to 370 in the school year ending in 2004. This was the first decrease since the 2000-2001 school year.

Table 7

[^3]Figure 6

Figure 7

## Number of Iowa Public School Districts 1986 то 2004

[^4]The distribution of Iowa public school districts and students by enrollment category is presented in Table 8 for the 1985-1986, 2002-2003 and 2003-2004 school years. In 2003-2004 just under 70 percent of the school districts have less than 1,000 students and accounted for 27.8 percent of the total students. The nine school districts that fell in the largest enrollment category account for 27.2 percent of the total public K-12 enrollment. The 30 school districts in the smallest enrollment category accounted for 8.1 percent of the total number of districts and 1.2 percent of the total enrollment. Overall the percentage of districts in each enrollment category and the percentage of total enrollment by enrollment category did not change significantly between 2002-2003 and 2003-2004.

Table 8

Tables 9 and 10 show Iowa public and nonpublic school distribution by type for 2000-2001 through 20032004. There are 364 public high schools in 346 districts in 2003-2004. The remaining 24 districts send their high school students to other districts. Elementary schools represent the largest type for both public ( 53.7 percent) and nonpublic ( 86.0 percent).

Although the number of school districts decreased to 370 in 2003-2004, the number of public school districts sending high school students to another district remained unchanged at 24 . These districts no longer offer a high school program for their students. During the 2003-2004 school year, 57 school districts participated in some form of whole grade sharing. Table 11 provides information on the number of districts that sent their high school students out of the district.

[^6]Public high school enrollment distributions from 1999-2000 through 2003-2004 are shown in Table 12. The 100-199 high school enrollment category had the largest number and percent of schools for all years shown. High schools with enrollments between 100 and 299 accounted for approximately 55 percent of the total public high schools in Iowa in 2003-2004. The number of high schools with enrollments 1,700 or more remained at 6 in 2003-2004.

Table 12

## Enrollment Distribution by Area Education Agency (AEA)

Prior to the 2003-2004 school year, Area Education Agencies (AEA) 2, 6, and 7 merged to form AEA 267 and AEAs 3 and 5 merged to form AEA 8. Comparisons made to previous years include total enrollments from the merged AEAs. Area Education Agencies provide instruction and support for local school districts.

Public and nonpublic enrollments by AEA did not change significantly between 2002-2003 and 20032004. AEA 11 accounted for the largest portion of public ( 24.2 percent in 2003-2004) and nonpublic enrollment ( 21.0 percent in 2003-2004) for both years displayed. AEA 4 and AEA 14 each accounted for slightly more than 2 percent of the total public enrollment in 2003-2004. AEA 14 had the lowest nonpublic enrollment as well ( 0.3 percent in both 2002-2003 and 2003-2004). Table 13 and Figure 8 provide detailed enrollment information by AEA.

## County Level Enrollments

Table 14 provides public school county level certified enrollments for 2002-2003 and 2003-2004. Tama and Dallas counties had the largest percentage increase ( 15.4 and 8.1 percent respectively) while Ringgold, Van Buren and Grundy counties had the largest percentage decrease (14.0, 8.7 and 8.1 respectively) between 2002-2003 and 2003-2004. Polk county accounted for the largest percentage of statewide enrollments at 13.3 percent. Overall public enrollment decreased 0.4 percent between the two school years shown.

[^7]Figure 9 shows the nonpublic enrollment comparison to total enrollment by county. Thirty-four counties had no nonpublic enrollments during the 2003-2004 school year. As in previous years, Sioux (36.7 percent), Carroll (27.7 percent), Dubuque ( 26.6 percent), and Kossuth (23.1 percent) counties each had over 20.0 percent of total nonpublic enrollment.

## Racial/Ethnic Distribution of Students

Table 15 provides the public school enrollments by racial/ethnic groups for 1985-1986, 2002-2003 and 2003-2004. The number of Hispanic students increased 10.7 percent between 2002-2003 and 2003-2004, the largest increase of all the racial/ethnic groups. The non-white racial/ethnic groups accounted for 11.8 percent of the total enrollment, up from 11.0 percent in 2002-2003. Since 1985-1986, the percentage of white students has decreased from 95.3 percent to 88.2 percent, a change of -8.3 percent. The change in the racial/ethnic makeup of the student population reflects the change in Iowa's population racial/ ethnic makeup (see Figure 9B in the Background Demographics Section).

Enrollments for nonpublic racial/ethnic groups decreased in 2003-2004. White students accounted for 94.3 percent of the nonpublic PK-12 total enrollment in 2003-2004. Hispanic at 2.4 percent, remained the largest non-white racial/ethnic group while Asian remained the second largest with 1.6 percent of the total enrollment in 2003-2004. Table 16 displays the nonpublic school prekindergarten through grade 12 enrollments by race/ethnicity.

Nationally the percentage of minority enrollments was 38.8 percent in 2000, up from 29.6 percent in 1986 (Table 17). The largest increase in the minority enrollments occurred in the Hispanic race/ethnicity group, which increased 6.4 percentage points between 1986 and 2000. In 2000, Hispanics accounted for over 40.0 percent of the student population in California, New Mexico, and Texas. The African American race/ethnicity group remains the largest minority group at 17.2 percent of total enrollment in 2000, up from 16.1 percent in 1986. Five states including Iowa had over 90.0 percent of the total enrollment in the White race/ethnicity group.

## Weighted English Language Learners and Total English Language Learners

Limited English Proficient (LEP) students are defined by the Code of Iowa as follows: "a student's language background is in a language other than English, and the student's proficiency in English is such that the probability of the student's academic success in an English-only classroom is below that of an academically successful peer with an English language background".

The increase in immigrants in Iowa has lead to an increase in languages spoken in the state. This is reflected in school districts as well. English Language Learners (ELL), also referred to as LimitedEnglish Proficient (LEP), have increased substantially in the last ten years.

Two types of ELL students are reported. Eligible ELL students receive a weighting of 0.22 for purposes of school foundation funding. School districts may receive additional funding for these weighted ELL students for three years. The other type of ELL students includes any public or nonpublic PK-12 ELL students who no longer qualify for additional funding for their school district because they have exceeded the three-year limit.

## Weighted English Language Learners

Table 18 provides data on the distribution of weighted English language learners by enrollment category. Weighted ELL enrollment increased 4.5 percent in 2003-2004. All enrollment categories had increases in ELL weighted enrollments with the smallest enrollment category almost doubling between 2002-2003 and 2003-2004. Between 1993-1994 and 2003-2004, the total ELL weighted enrollment increased 150.3 percent. Only the smallest enrollment category ( $<250$ ) had an increase below 100 percent between those years.

## Total English Language Learners

Figure 10 provides yearly summaries for the Iowa public and nonpublic total English language learners from 1986 to 2004. The 2003-2004 increase of 1,282 was the third largest increase of all the years shown behind the increase that occurred in 2001-2002 (an increase of 2,110). The total ELL counts increased 9.0 percent between 2002-2003 and 2003-2004 and 390.5 percent since 1986.

The number of ELL students whose primary language was Spanish continued to increase in Iowa school districts. In 2003-2004, Spanish accounted for 72.9 percent of primary languages for ELL students. Bosnian remained second, however the number of Bosnian ELL students decreased by 354 in 20032004. Table 19 details all the ELL primary languages for PK-12 public and nonpublic students.

## Open Enrollment

Under the Open Enrollment law, parents may enroll their children in a district outside of the district in which they reside. Open enrollment for public students is provided under Iowa Code 282.18. The Open Enrollment Act was implemented during the 1989-1990 school year and states: "It is the goal of the general assembly to permit a wide range of educational choices for children enrolled in schools in this state and to maximize ability to use those choices. It is therefore the intent that this section be construed broadly to maximize parental choice and access to educational opportunities that are not available to children because of where they live.

For the school year commencing July 1, 1989, and each succeeding school year, a parent or guardian residing in a school district may enroll the parent's or guardian's child in a public school in another school district in the manner provided in this section".

The upward trend in the number of open enrolled students continued in 2003-2004. The percentage of open enrolled students to total enrollment was 4.5 percent in 2003-2004, up from 4.2 percent the previous school year. Table 20 provides the historical data on the number of open enrolled students and Figure 11 shows the continued upward trend.

Table 20

## Number of Open Enrolled Iowa <br> K-12 Public Students 1990-1991 through 2003-2004

|  | Number of <br> Students <br> Open Enrolled | Total Certified <br> Enrollment | Open Enrolled <br> Students as a <br> Percent of Total <br> Enrollment |
| :---: | :---: | :---: | :---: |
| $1990-1991$ | 2,757 | 483,399 | $0.6 \%$ |
| $1991-1992$ | 5,227 | 491,451 | 1.1 |
| $1992-1993$ | 7,427 | 495,342 | 1.5 |
| $1993-1994$ | 9,330 | 497,009 | 1.9 |
| $1994-1995$ | 10,860 | 500,592 | 2.2 |
| $1995-1996$ | 12,502 | 504,505 | 2.5 |

| $2000-2001$ | 18,554 | 494,291 | 3.8 |
| $2001-2002$ | 19,436 | 489,523 | 4.0 |
| $2002-2003$ | 20,471 | 487,021 | 4.2 |
| $2003-2004$ | 21,605 | 485,011 | 4.5 |

[^9]Figure 11

Table 21 provides data on the net enrollment change by enrollment category. As in previous years, the 1,000-2,499 enrollment category continued to have the largest net enrollment change among all the enrollment categories. Open enrollment results in a net loss in the two smallest enrollment categories (<250 and 250-399) and the largest enrollment category (7,500+), continuing the trend from previous years.

Table 21

[^10]
## Special Education Enrollment

Children requiring special education and special education are defined in Iowa Code 256B.2. The Code definition of children requiring special education states: "persons under twenty-one years of age, including children under five years of age, who have a disability in obtaining an education because of a head injury, autism, behavioral disorder, or physical, mental, communication, or learning disability, as defined by the rules of the department of education." Special education is defined as: "classroom, home, hospital, institutional, or other instruction designed to meet the needs of children requiring special education..."

Although the annual percentage change in special education enrollment increased in 2003-2004, the increase of 0.5 percent was the lowest percentage increase for all the years shown. The ratio of special education enrollment to certified enrollment increased for the $18^{\text {th }}$ straight year, moving to 13.4 percent in 2003-2004. Table 22 provides detailed information on special education enrollment and Figure 12 shows the annual upward trend of special education enrollment as a percent of total enrollment.

## Staff

Data on licensed staff and some non-licensed staff for Iowa's schools and area education agencies for the 2003-2004 school year and the 1985-1986 base year are presented in this chapter. The data presented are summarized on the state level as well as by enrollment categories and area education agencies. National and regional state comparative data are also presented where available. Characteristics of staff such as age, race/ethnicity, gender, experience, and salary are listed. The information in this section displays data on teachers, principals, superintendents, other licensed positions and some non-licensed staff. Pupil-teacher ratios and the number of instructional aides for public schools are also included.

## Teacher Characteristics

Information on licensed staff is collected from schools through the Licensed Staff Detail report on the Basic Educational Data Survey (BEDS) at the beginning of each school year. A maximum of ten positions and ten assignments can be reported to accurately reflect the duties of the staff. In this section, data on full-time teachers are presented. Full-time teachers are staff that reported having at least one position code of teacher, full-time contract, a regular salary of at least $\$ 24,500$, and at least 180 contract days. There were 5,573 teachers that reported serving in other positions, such as administrative and student support services in 2003-2004. The reported salary for these teachers may be impacted by these additional duties since salary is not reported separately for each position.

Characteristics of full-time teachers in Iowa public and nonpublic schools are presented in Table 23. There was not much of a significant change in characteristics between 2002-2003 and 2003-2004. The average age and experience of full-time teachers in 2003-2004 has increased since 1985-1986. The average age of full-time public school teachers has increased from 39.9 in 1985-1986 to 42.4 in 2003-2004 and the average total experience has increased from 13.9 in 1985-1986 to 15.1 in 2003-2004. The percent of females increased from 63.5 to 72.0 percent from 1985-1986 to 2003-2004. The percent of full-time teachers with advanced degrees decreased from 29.0 percent in 1985-1986 to 26.9 percent in 2003-2004.

The characteristics of nonpublic school teachers also changed little from 2002-2003 to 2003-2004. The average age increased from 36.6 to 41.4 between 1985-1986 and 2003-2004. The average years of total experience also increased from 1985-1986 to 2003-2004, 11.5 versus 13.7. The percent of female teachers increased from 77.5 percent in 1985-1986 to 80.8 percent in 2003-2004. The percent of teachers with advanced degrees decreased from 16.0 percent in 1985-1986 to 14.7 percent in 2003-2004.

The number, percent with advanced degrees, percent female, percent minority, average years of total experience, average years of district experience, and average age of full-time public school teachers are listed by enrollment category in Table 24. The smallest enrollment category, less than 250 students, had the smallest percent of teachers with advanced degrees, 7.7 percent. The largest enrollment category, 7,500 or more students, had the largest percent of teachers with advanced degrees, 37.5 percent. The largest enrollment category had the largest percent of minority teachers with 4.3 percent and the 250399 and 600-999 enrollment categories had the smallest percent of minority teachers with 0.7 percent.

## Teacher Age and Experience

Table 25 and Figure 13 present the number of full-time public school teachers by age category for 19931994 and 2003-2004. The percentage of teachers age 35 and younger increased from 26.5 percent in 19931994 to 31.2 percent in 2003-2004. There was approximately a 13 percentage point decrease in the percent of teachers ages 36-45. The percentage of teachers age 45 and younger has decreased from 62.8 percent to 54.5 percent from 1993-1994 to 2003-2004. The percentage of teachers age 56 and older increased from 9.7 in 1993-1994 to 10.6 in 2003-2004. The percentage of teachers age $46-55$ increased from 27.5 percent in 1993-1994 to 34.9 percent in 2003-2004. Overall the total number of full-time teachers has increased by 3,161 (10.4 percent) from 1993-1994 to 2003-2004.

[^14]Figure 13

Table 26 and Figure 14 report the combined age and experience distribution of Iowa full-time teachers in 1993-1994 and 2003-2004. Full-time public school teachers in Iowa that are covered by the Iowa Public Retirement System (IPERS) are eligible to receive full retirement benefits if they are at least 55 years old and the sum of their age and total IPERS covered employment is equal to or greater than 88 . The percent of teachers with combined age and experience of 88 or higher decreased from 6.4 in 1993-1994 to 5.7 in 2003-2004. The percent of teachers with combined age and experience between 81 and 87 was higher in 2003-2004 than in 1993-1994, 10.3 percent versus 6.5 percent.

## Teacher Contract Days

The number of contract days served by teachers in public school districts is part of the information collected on the Licensed Staff Detail report of the fall Basic Educational Data Survey (BEDS). Table 27 lists the distribution of full-time public school teachers by contract days for 2001-2002, 2002-2003, and 2003-2004. The distribution is about the same for all three years. Following the trend of previous years, the highest percentage of teachers had a contract length of 190 days in 2003-2004, 29.2 percent.

[^16]
## Teacher Assignments

Tables 28 and 29 list the average number of different teaching assignments for Iowa full-time public school teachers in grades 9-12 by enrollment category for 1985-1986, 2002-2003 and 2003-2004 and the distribution of assignments for 2003-2004. Teaching assignments for public school teachers are collected on the Licensed Staff Detail form from the fall BEDS. Up to ten assignments can be reported for each teacher. As in previous years, the number of teaching assignments was higher for teachers in the smaller enrollment categories than for those in the larger enrollment categories in 2003-2004. The average number of teaching assignments for teachers in the districts with less than 250 students was 4.7 while the average number of assignments for teachers in the districts with 7,500 or more students was 2.1 in 2003-2004. In 2003-2004, about 80 percent of the public school teachers in grades $9-12$ had 4 or less teaching assignments (Table 29).

Table 28

Note: State total does not include AEA teachers.

Table 29

## Minority Teacher Characteristics

Table 30 lists the characteristics of minority and non-minority full-time public school teachers in Iowa in 2003-2004. Minority teachers accounted for 1.8 percent of all full-time public school teachers in 20032004. The percent of females was lower for minorities than non-minorities, 68.6 percent versus 72.0 percent. The percent of teachers with advanced degrees was higher for minority teachers ( 30.0 percent) than non-minority teachers ( 26.8 percent). The average salary of minority teachers was slightly higher than non-minority teachers, $\$ 39,522$ compared to $\$ 39,430$. Average total experience for minority teachers was less than non-minority teachers, 12.0 years versus 15.2 years.

Table 30

## Characteristics of Iowa Full-Time Public School Teachers by Minority and Non-minority Groups 2003-2004

|  | Characteristics | Non-Minority | Minority |

|  | Average Total Experience | 15.2 | 12.0 |
|  | Average District Experience | 11.8 | 9.3 |
|  | Average Salary | \$39,430 | \$39,522 |
| Source: <br> Notes: | Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Staff File. <br> Includes AEA teachers. <br> Figures for 2003-2004 represent average salaries for full-time public school staff with at least one teaching position code. 5,573 full-time public school staff in 2003-2004 with teaching position codes also reported that they served in the capacity of administrator and/or student support services personnel. Average salaries for those staff include salaries for these additional responsibilities as well. |  |  |

## Teacher Salaries

Licensed staff salaries are reported through the fall BEDS. Benefits are not included in the reported salary, but salary for extra duties such as yearbook sponsorship and coaching are included. Regular salary is the portion of the contract salary paid for regular responsibilities directly associated with the reported position(s). The total salary reported includes the regular salary and the salary reported for extra duties. In 2003-2004 there were 5,573 licensed staff with teaching positions that also reported having administrative and supportive assignments and/or positions, which could inflate the average teacher salary figures for 2003-2004.

In 2002-2003 and 2003-2004, full-time teachers were required to have a minimum regular salary of \$24,500. For calculation purposes, full-time teachers are defined as having a minimum contract length of 180 days. The average salary of full-time public school teachers was \$39,432 in 2003-2004, which was an increase of 81.8 percent from 1985-1986, and an increase of 0.9 percent from 2002-2003.

The average salaries of full-time public school teachers by enrollment category for 1985-1986, 2002-2003 and 2003-2004 are presented in Table 31. The average salary was higher for the larger enrollment categories. The lowest average salary $(\$ 31,292)$ was in the smallest enrollment category, less than 250 students, while the highest average salary $(\$ 42,894)$ was in the largest enrollment category, 7,500 students or more.

Table 31

[^17]
## Average Regular Salary Versus Average Total Salary

The portion of a contract salary that is paid for direct position responsibilities is referred to as regular salary. The total salary of teachers includes regular salary and extra salary paid for extra curricular and extra duties that go beyond the direct position responsibilities, such as, coaching, yearbook sponsorship, and supervision of school organizations (e.g. student council). Table 32 contains the average regular salary and the average total salary for full-time teachers from 2000-2001 through 2003-2004. Regular salary data was not collected prior to the 2000-2001 school year. As in 2001-2002 and 20022003, the average total salary was about 3 percent higher than the average regular salary in 2003-2004.

Table 32

# Average Full-Tine Teacher Regular Salary vs. <br> Average Full-Tine Teacher Total Salary 2000-2001 through 2003-2004

| Average Total Salary | $\$ 36,480$ | $\$ 38,230$ | $\$ 39,059$ | $\$ 39,432$ |
| Difference | NA | $\$ 987$ | $\$ 1,059$ | $\$ 1,051$ |
| Percent Total Salary Greater <br> Than Regular Salary | NA | $2.7 \%$ | $2.8 \%$ | $2.7 \%$ |

[^18]Tables 33 through 35 contain salary information for Iowa public school full-time teachers by years total experience and degree status. In most cases, the average salary increased with the size of the enrollment category in 2003-2004. The average salary of teachers at the baccalaureate degree level with ten or more years of experience was about $\$ 11,000$ higher than those at the same degree level with five or less years of experience, $\$ 41,498$ compared with $\$ 29,971$. The average salary of teachers at the advanced degree level and five or less years of experience was over $\$ 14,000$ lower than the average salary of teachers at the same degree level and ten or more years of experience, $\$ 34,797$ versus $\$ 48,869$. The difference in average salaries between teachers at the advanced degree level and the baccalaureate degree level was $\$ 4,826$ for teachers with five or less years of experience, $\$ 4,670$ for teachers with six to ten years of experience, and \$7,371 for teachers with more than ten years of experience in 2003-2004.

Notes: State total does not include AEA teachers.
Figures in 2003-2004 represent average salaries for full-time public school staff in this group with teaching position codes. 1,433 full-time public school staff with teaching position codes also reported that they served in the capacity of administrator and/or student support services personnel. Average salaries for these individuals would include salaries for these additional responsibilities as well.

Notes: State total does not include AEA teachers.
Figures in 2003-2004 represent average salaries for full-time public school staff in this group with teaching position codes. 3,064 full-time public school staff with teaching position codes also reported that they served in the capacity of administrator and/or student support services personnel. Average salaries for these individuals would include salaries for these additional responsibilities as well.

## Teacher Salary Comparisons - Nation and Midwest States

Average salaries of public school teachers for Iowa, the Midwest states and the nation, based on the National Education Association's Rankings of the States and Estimates of School Statistics, are presented in Table 36 and Figure 15. Iowa ranked 37th in the nation in 2003-2004, a drop of three ranks from 2002-2003. Iowa was ranked fifth among the nine Midwest states in 2003-2004.

Notes: *Salary does not include Phase Ill funds.
Figures for lowa represent average salaries for full-time public school staff with teaching position codes. Approximately 5,000 full-time public school staff in 2002-2003 and 2003-2004 with teaching position codes also reported that they served in the capacity of administrator and/or student support services personnel. Average salaries for these staff include salaries for these additional responsibilities as well.

Figure 15

## Average Salaries of Full-Time Public School Teachers For Iowa and the Nation, 1985-1986 то 2003-2004

## Teacher Salaries by Area Education Agency

There were 12 Area Education Agencies (AEAs) in the state of Iowa that provided services to local school districts in 2003-2004. The average salary of full-time public school teachers by AEA is presented in Figure 16. Table 37 also lists the average salary of full-time public school teachers by AEA along with other characteristics. Approximately 46 percent of full-time public school teachers in Iowa taught in AEAs 9, 10, and 11 in 2003-2004. AEA 9 had the highest average salary, $\$ 40,942$. AEAs $1,8,267,13$, 14 , and 15 had average salaries that were less than the state average salary of $\$ 39,432$. AEA 12 had the highest percent of teachers with advanced degrees, 31.9 percent, AEA 4 and AEA 8 had less than 20 percent of teachers with advanced degrees.

Notes: Includes AEA teachers.
Figures for lowa 2003-2004 represent average salaries for full-time public school staff with teaching position codes. 5,573 full-time public school staff in 2003-2004 with teaching position codes also reported that they served in the capacity of administrator and/or student support services personnel. Average salaries for these staff include salaries for these additional responsibilities as well. AEA 267 was formed from AEAs 2,6 and 7 and AEA 8 was formed from AEAs 3 and 5 .

## Teacher Salary Comparisons with Other Occupational Groups

State occupational wage estimates for a variety of occupational groups are calculated by the U.S. Bureau of Labor Statistics. Table 38 lists the wage estimates for a selection of occupational groups requiring baccalaureate degrees in the state of Iowa for 2001 and 2002. Average teacher salary increased by 4.8 percent between 2001 and 2002. Air Traffic Controllers had the largest percent increase in average salary between 2001 and 2002, 8.9 percent. Child, family and school social workers and interior designers had a lower average salary than teachers in 2002.

Table 38

## Iowa Salary Comparisons by Occupation 2001 and 2002

| Occupation | Average Salary |  | Percent Change 2001 to 2002 |
| :---: | :---: | :---: | :---: |
|  | 2001 | 2002 |  |
| Electrical Engineer | \$62,120 | \$62,490 | 0.6\% |
| Computer Software Engineer, Applications | 65,710 | 64,260 | -2.2 |

[^20]
## Teacher Salaries and the Consumer Price Index (CPI)

The consumer price index (CPI) compares the cost for a collection of goods in one year to the cost of the same goods the following year in order to measure the change in prices over time. Table 39 compares the changes in the average salary of full-time teachers in Iowa and the nation to the change in the CPI. The percent change in average full-time teacher salary in Iowa was 0.9 percent and the percent change in average full-time teacher salary in the nation was 2.0 percent between 2002-2003 and 2003-2004.

Table 39

## Change in Full-Time Public School Teachers Compared to Changes n the Consumer Price Index <br> 1990-1991 through 2003-2004

Note: Figures for lowa 1999-2000 to 2003-2004 represent average salaries for full-time public school staff with teaching position codes. Approximately 5,000 full-time public school staff in 1999-2000 to 20032004 with teaching position codes also reported that they served in the capacity of administrator and/ or student support services personnel. Average salaries for these staff include salaries for these additional responsibilities as well.

## Beginning Full-time Public School Teachers

Information on beginning teachers is collected on the fall BEDS. Beginning teachers are those teachers who are in their first year of teaching. Characteristics of beginning full-time teachers are listed in Table 40 for 1997-1998 through 2003-2004. The number of beginning full-time teachers increased between 19971998 and 2000-2001, but began to decrease in 2001-2002. However, the number of beginning full-time teachers increased from 1,104 to 1,256 between 2002-2003 and 2003-2004. For 2002-2003 and 2003-2004, the minimum salary for full-time public school teachers was $\$ 24,500$. The average salary of beginning full-time teachers increased by only $\$ 20$ between 2002-2003 and 2003-2004. The percent of minority beginning full-time teachers decreased by 0.3 percentage points in 2003-2004. The percent of beginning full-time teachers with advanced degrees increased from 4.9 percent in 2002-2003 to 5.1 percent in 20032004.

Table 40

## Characteristics of Beginning Full-Time Teachers in Iowa Public Schools 1997-1998 through 2003-2004

The number of beginning full-time teachers and percentage of total full-time teachers that were beginning full-time teachers by enrollment category is shown in Table 41 for 1997-1998 to 2003-2004. The enrollment category of 250-399 students had the largest percentage of beginning full-time teachers in 2003-2004, 6.2 percent. The smallest percentage of beginning full-time teachers was 3.2 percent in the 400-599 enrollment category. The percentage of beginning full-time teachers increased for all enrollment categories except the 400-599 and 2,500-7,499 enrollment categories in 2003-2004. The percent of beginning full-time teachers decreased at the AEAs between 2002-2003 and 2003-2004, 4.7 vs. 3.8.

## Beginning Teacher Salary Comparisons with Midwest States

Average salaries for beginning teachers in Iowa and the other midwest states as reported by the American Federation of Teachers (AFT) for the 2001-2002 school year are listed in Table 42. Illinois had the highest average beginning teacher salary $(\$ 31,761)$ and average teacher salary $(\$ 49,679)$ out of all Midwest states and was the only midwest state to have a higher average than the national average in both categories. North Dakota had the lowest average beginning teacher salary, $\$ 20,988$, and South Dakota had the lowest average teacher salary, $\$ 31,383$, out of all midwest states. Iowa's average beginning teacher salary was 10.3 percent lower than the national average beginning teacher salary and Iowa's average teacher salary was 13.8 percent below the national average teacher salary.

## Beginning Teacher Salaries Compared to Expected Beginning Salaries in Other Occupations

The expected salaries of college graduates hired in the spring in the United States in 1990, 1992, 1994, 1996, 1998, 2000 and 2002 for various occupations are listed in Table 43. Of the occupations listed, teachers had the lowest expected salary in 2002, \$30,719. Engineering graduates had the highest expected salary in 2002 at $\$ 49,702$. Engineering, math/statistics, and computer science graduates had expected salaries over $\$ 45,000$.

Table 43

| Beginning Teacher Salaries and Expected Salaries of College Graduates to be Hired in the Spring in the United States 1990, 1992, 1994, 1996, 1998, 2000 and 2002 |  |  |  |  |  |  |  |

## Characteristics of Principals

Table 44 lists the characteristics of principals in public and nonpublic schools in Iowa. The percent of female principals in public schools increased from 8.7 percent in 1985-1986 to 34.1 percent in 2003-2004. The total number of principals in public and nonpublic schools decreased between 1985-1986 and 20032004. There were 1,223 public school principals in 1985-1986 and 1,069 in 2003-2004. There were 177 nonpublic school principals in 1985-1986 and 97 in 2003-2004. The percent of minority principals in public schools increased from 1.6 percent in 1985-1986 to 3.5 percent in 2003-2004 while the number of minority principals in nonpublic schools remained at 0 .

[^22]
## Principal Age and Experience

Table 45 and Figure 17 show the age distribution of full-time public school principals in 1993-1994 and 2003-2004. In 1993-1994 about 35 percent of full-time public school principals were age 51 years or older and in 2003-2004 about 45 percent of full-time public school principals were 51 years or older. Table 46 and Figure 18 show the combined age and experience distribution of full-time public school principals. Principals are eligible for the same retirement benefits as teachers. They are able to retire under IPERS with full benefits when their combined age and experience is at least 88 years and their age is at least 55. About 17 percent of full-time public school principals had combined age and experience of 88 or more in 1993-1994 and about 11 percent had combined age and experience of 88 or more in 2003-2004. The percent of principals with combined age and experience between 81 and 87 was two times higher in 2003-2004 than in 1993-1994, 20 percent vs. 10.1 percent.

## Principal Salaries

As seen in Table 47, the average salary of full-time public school principals in Iowa increased by 98.5 percent between 1985-1986 and 2003-2004. The average salary increased by 2.9 percent between 20022003 and 2003-2004. The greatest increase in salary from 2002-2003 to 2003-2004 was for principals in the enrollment category with 250-399 students, 4.6 percent. The highest average salary was in the 7,500 or more enrollment category, $\$ 77,798$, and the lowest average salary was in the enrollment category of less than 250 students, $\$ 60,205$.

## Characteristics of Superintendents

The characteristics of full-time public school superintendents in 1985-1986, 2002-2003 and 2003-2004 are listed in Table 48. There were a number of district reorganizations between 1985-1986 and 2003-2004 that accounts for the decrease in number of superintendents from 425 in 1985-1986 to 332 in 2003-2004. Although there were 370 school districts in 2003-2004, 19 districts shared superintendents and 19 districts reported a part-time superintendent. Between 1985-1986 and 2003-2004 the average age of fulltime superintendents increased from 48.7 to 51.7. The percent of female superintendents increased from 1.6 percent in 1985-1986 to 10.5 percent in 2003-2004. The percent of full-time superintendents with specialist/doctorate degrees increased from 46.9 percent to 63.5 percent between 1985-1986 and 20032004.

[^27]
## Superintendent Age and Experience

Table 49 and Figure 19 show that the average age of full-time public school superintendents has increased between 1993-1994 and 2003-2004. In 1993-1994, 45.6 percent of full-time public school superintendents were over 50 years old, while in 2003-2004 60.8 percent were over 50 years old.

Superintendents are able to retire under IPERS with full benefits when their combined age and experience is at least 88 years. Table 50 and Figure 20 show the combined age and experience distribution of full-time public school superintendents. The percent of full-time superintendents eligible for IPERS retirement benefits was lower in 2003-2004 than in 1993-1994, 23.8 percent compared to 26.5 percent. As with teachers and principals, the percent of superintendnets in the age plus experience between 81 and 87 group was much higher in 2003-2004 than in 1993-1994, 23.5 percent vs. 8.7 percent.

## Superintendent Salaries

The average salaries of full-time public school superintendents by enrollment category are listed in Table 51. The average salary of full-time public school superintendents in 2003-2004 was \$90,613, an increase of 122.6 percent from 1985-1986 and a 4.0 percent increase from 2002-2003. The largest increase in average salary between 2002-2003 and 2003-2004 was 7.8 percent in the smallest enrollment category, less than 250 students. Although the average salary decreased by 2.7 percent in the largest enrollment category, 7,500 students or more, that enrollment category had the highest average salary $(\$ 128,028)$.

## Teacher, Principal, and Superintendent Salary Comparisons

Figure 21 presents the annual percentage increases in average salaries for full-time public school teachers, principals, and superintendents from 1993-1994 to 2003-2004. For all years except 1999-2000 superintendents' average salary had the greatest percentage increase. Teacher average salary had the smallest percentage increase for all years except 2001-2002.

Figure 21

## Annual Percentage Increases n Average Salaries for Iowa Ful-Time Public School Teachers, Principals, and Superiniendenis 1993-1994 то 2003-2004

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Staff Files.
Notes: Teacher figures for 2002-2003 and 2003-2004 represent average salaries for full-time public school staff with teaching position codes. Approximately 5,000 full-time public school staff in 2002-2003 and 2003-2004 with teaching position codes also reported that they served in the capacity of administrator and/or student support services personnel. Average salaries for these staff include salaries for these additional responsibilities as well.
Salary does not include Phase III funds from 1994-1995 to 2002-2003. Phase III funds did not exist in 2003-2004.

The average salaries of full-time public school teachers, principals, and superintendents by enrollment category are listed in Table 52. The average salaries increased as enrollment category size increased for teachers, principals, and superintendents.

Table 52

[^28]
## Gender Comparison

Tables 53 and 54 compare characteristics of full-time teachers and principals by gender. There were a greater number of female teachers than male teachers in 2003-2004: 24,254 females and 9,434 males. The average salary for male teachers was higher than the average salary for female teachers, $\$ 41,308$ versus $\$ 38,702$. There was a higher percent of male minority teachers (2.0 percent) than female minority teachers (1.7 percent). The average years of total experience and average years of district experience was higher for males than females. There were 28.7 percent of male teachers with advanced degrees and 26.1 percent of female teachers with advanced degrees.

## Table 53

## Gender Comparison of Iowa Full-Tine Public School Teachers - 2003-2004

| Characteristics | Female | Male |
| :--- | :---: | :---: |
| Average Age | 42.5 | 42.2 |

Notes: Includes AEA teachers.
Figures for 2003-2004 represent average salaries for full-time public school staff with teaching position codes. Approximately 5,000 full-time public school staff in 2003-2004 with teaching position codes also reported that they served in the capacity of administrator and/or student support services personnel. Average salaries for these staff include salaries for these additional responsibilities as well.

There were more male full-time public school principals than female full-time public school principals in 2003-2004, 704 compared to 365 (Table 54). The percent of minority principals was higher for males ( 4.0 percent) than females ( 2.5 percent). A higher percentage of female principals had advanced degrees than male principals, 95.9 percent versus 90.8 percent. The average experience of full-time principals was higher for males than females. The average salary of males was $\$ 70,509$, which was higher than the female average salary of $\$ 69,303$.

## Area Education Agency Licensed Staff

There were 12 area education agencies (AEAs) in Iowa in 2003-2004 with personnel who develop and provide programs, services, leadership in school improvement, professional development, emerging educational practices, school-community planning, curriculum, special education, school technology, and media services. The characteristics of full-time licensed staff in the AEAs are presented in Table 55. Approximately 81 percent of these staff members were female. Staff with advanced degrees made up 81.1 percent of the licensed AEA staff. The average age was 45.9 years and the average years of total experience was 18.3 . The average contract length was 198.6 days. The average salary of full-time licensed AEA staff was $\$ 47,460$. Table 56 lists the breakdown of the 2,300 full-time AEA licensed staff by position. The highest percent of the staff members were consultants ( 21.6 percent).

The number of public school full-time licensed staff by AEA is presented in Figure 22. Table 57 shows the distribution of public and nonpublic full-time licensed staff by AEA. AEA 11 had the highest percent of public school licensed staff ( 23.7 percent) and nonpublic school licensed staff ( 19.0 percent).

Note: *AEA full-time licensed staff are included. Figures may not total 100 percent due to rounding. No staff reported for East Monona CSD due to whole grade sharing all grades.

## Instructional Aides

Non-licensed staff members who assist teachers in the classroom are referred to as instructional aides. The number of full-time equivalent instructional aides by enrollment category for 1985-1986, 2002-2003, and 2003-2004 are listed in Table 58. The total number of instructional aides in the state increased by 222.5 percent between 1985-1986 and 2003-2004 and by 7.6 percent between 2002-2003 and 2003-2004. The enrollment category of less than 250 students had the only negative change in the number and percentage change of instructional aides between 2002-2003 and 2003-2004, -6.6 percent.

Table 58

## Instructional Aides in Iowa Public Schools 1985-1986, 2002-2003 and 2003-2004

[^30]
## Pupil-Teacher Ratios

Pupil-teacher ratios for Iowa public schools are presented in Figures 23 and 24 and Table 59. The pupilteacher ratio decreased slightly, from 15.3 to 15.2, between 2002-2003 and 2003-2004. The smallest enrollment category, less than 250 students, had the smallest pupil-teacher ratio in 2003-2004, 9.9. The enrollment category of 2,500-7,499 students had the largest pupil-teacher ratio, 16.8.

Note: Pupil-teacher ratios do not include special education teachers or ungraded special education students.

## Program

This chapter includes information regarding school district organizational structure, curriculum unit offerings, enrollments for foreign language, higher level mathematics, higher level science, and computer-related courses, graduation requirements for mathematics and science, class size statistics in grades kindergarten through three, and early childhood education information on preschool enrollments and kindergarten type. The Program chapter also includes a technology section with information regarding expenditures for computer hardware and software, availability of computers for school districts, and school district participation in Project EASIER (Electronic Access System for Iowa Education Records).

## School District Organizational Structure

The organizational structure of Iowa public school districts in 1985-1986 and 2003-2004 are displayed in Tables 60 and 61. In 1985-1986 the largest percent of districts had a K-6, 7-12 organizational structure ( 38.9 percent). In 2003-2004, 1.9 percent of the districts used a K-6, 7-12 organizational structure. The largest percent of districts had an organizational structure of K-5, 6-8, 9-12 in 2003-2004 (29.5 percent). Preschool was included in only one organizational structure in 1985-1986, but was included in 9 of the 19 organizational structures in 2003-2004.

## Curriculum and Course Enrollments

Table 62 presents data on the course offerings within Iowa public school districts for grades 9-12. In 2002-2003 there was a slight change in the methodology used to generate the data. Table 62 lists the data that was calculated using the methodology used before 2002-2003. Courses with the same title with different levels are calculated as separate Carnegie units. A course that is offered and taught daily for an entire year is counted as one Carnegie unit. The Iowa Department of Education used local school district course codes prior to 1997-1998. In 1997-1998 the Department began to collect curriculum data using National Center for Education Statistics (NCES) course codes including a course level assignment. Between 1997-1998 and 2001-2002 course level was not a determining factor in the calculation of average curriculum units offered and taught. Table 63 lists the second set of data that was calculated using the changed methodology. Courses with the same title with different levels are counted as the same course. Table 64 lists information on courses that have been designated as honors level courses.

Methodology changes were made in 2002-2003 to present a more accurate picture of the course enrollments for foreign language (Tables 65 and 66), higher level mathematics (Table 67), higher level science (Tables 68 and 69) and computer-related courses (Table 70). Students in all course levels of the courses are counted in the enrollment figures. The enrollment data for these courses are listed for 1985-1986 and for 2000-2001 to 2003-2004.

## Curriculum Unit Offerings

The average curriculum units offered and taught by district enrollment category where courses with the same title and different levels are counted as separate courses are listed in Table 62 for 1985-1986 and 2000-2001 to 2003-2004. In most cases, the number of units shown by enrollment category increase by the size of the enrollment category for all courses. The number of units for all courses shown statewide increased for almost every year shown. The exceptions were that the number of curriculum units for mathematics decreased from 9.5 to 9.4 , the number of science units stayed the same, and the number of foreign language decreased from 5.9 to 5.6 between 2002-2003 and 2003-2004.

[^37]The numbers of units of honors level courses offered and taught by enrollment category are reported in Table 64 for 2000-2001 to 2003-2004. Foreign language courses had the highest state average number of units in 2003-2004. For every year listed, districts with enrollment over 2,500 students offered a greater number of honors level units than the state average for all courses.

## Foreign Language Enrollments

Table 65 lists the number of Iowa public school 9-12 grade students who were enrolled in foreign language courses by enrollment category for 1985-1986 and 2000-2001 to 2003-2004. The estimated percentage of students enrolled in foreign language courses is calculated by dividing the total enrollment in foreign language courses by the enrollment for grades 9-12. Between 2002-2003 and 20032004 the percent of students enrolled in foreign language courses increased from 51.8 percent to 53.0 percent. Every enrollment category except 250-399 had at least 50 percent of the students enrolled in foreign language courses in 2003-2004.

Table 65

Source: lowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Curriculum and Enrollment Files.
Note: Estimated percents are based on the assumption that foreign language courses are normally taken in grades 9-12.

The foreign language enrollment by language for 1985-1986 and 2000-2001 to 2003-2004 is shown in Table 66. Approximately 98 percent of the students enrolled in foreign language courses in 2003-2004 were enrolled in Spanish, French, or German. Spanish had the highest enrollment of the foreign languages listed for each year shown. The percent of students taking Spanish courses decreased slightly between 2002-2003 and 2003-2004, 79.5 percent versus 79.4 percent.

## Higher Level Mathematics Enrollments

Information regarding enrollment in higher level mathematics courses by enrollment category is listed in Table 67 for 1985-1986 and 2000-2001 to 2003-2004. Higher level mathematics courses include trigonometry and calculus. The estimated percentage of pupils enrolled was found by dividing the number of students enrolled in higher level mathematics courses by the number of students in grades 11 and 12. The statewide percent of students enrolled in higher level mathematics courses increased from 19.4 percent to 19.8 percent between 2002-2003 and 2003-2004. The percent of females enrolled in higher-level mathematics decreased slightly from 48.9 percent in 2002-2003 to 48.8 percent in 20032004.

## Higher Level Science Enrollments

Tables 68 and 69 list the higher level science enrollments and estimated percent of public high school students enrolled in higher level science courses (chemistry and physics) in 1985-1986 and 2000-2001 through 2003-2004. The estimated percentage of students enrolled in chemistry is found by dividing the number of students enrolled in chemistry by the number of students in grade 11. The estimated percentage of students enrolled in physics is found by dividing the number of students enrolled in physics by the number of students in grade 12 .

## Chemistry

The statewide percentage of $11^{\text {th }}$ grade students enrolled in chemistry courses increased from 64.2 percent to 67.1 percent between 2002-2003 and 2003-2004. In 2003-2004, all enrollment categories had over 60 percent of the students enrolled in chemistry except for the enrollment category of < 250 students ( 53.7 percent). Following the trend of the previous three years, over 50 percent of the students were female in 2003-2004 (54.0 percent). Statewide, the percent of students enrolled in chemistry courses increased by 18.9 percentage points between 1985-1986 and 2003-2004. Every enrollment category except the smallest category ( $<250$ students) increased in the percent of students enrolled in chemistry courses during that same time frame (Table 68).

## Physics

Public school physics enrollments by enrollment category for 1985-1986 and 2000-2001 to 2003-2004 are shown in Table 69. The statewide percentage of students enrolled in physics decreased from 27.5 percent in 2002-2003 to 26.8 percent in 2003-2004. Also, the statewide percentage of females enrolled in physics decreased from 43.8 percent to 42.5 percent between 2002-2003 and 2003-2004.

## Computer-Related Course Enrollments

Table 70 contains information on Iowa public school enrollment in computer-related courses by enrollment category for 1985-1986 and 2000-2001 to 2003-2004. The percentage of students enrolled in computer-related courses is estimated by dividing the number of students enrolled in computer-related courses by the total number of students enrolled in grades 9 through 12. The statewide percentage of students enrolled in computer-related courses increased from 12.1 percent to 22.5 percent between 19851986 and 2003-2004. However, the statewide percentage of students enrolled in computer-related courses decreased from 23.3 percent in 2002-2003 to 22.5 percent in 2003-2004. The percent of females enrolled in computer-related courses increased by 1.3 percentage points between 2002-2003 and 20032004. The smallest enrollment category ( $<250$ students) had the largest percentage of students enrolled in computer-related courses in 2003-2004, 29.5 percent. The 2,500-7,499 enrollment category had the smallest percentage of students enrolled in computer-related courses in 2003-2004, 18.0 percent.

## Graduation Requirements for Mathematics and Science

The graduation requirements for Iowa public high schools are collected by the Department of Education through the spring Basic Educational Data Survey (BEDS). Iowa Administrative Code $12.5(14)$ states that one course unit is assigned to a course that meets at least 200 minutes per week for 36 weeks or is taught for the equivalent of 120 hours of instruction. For example, a course that meets one 50-minute period each day for both semesters is normally given two local credits, but would count as one course unit.

Tables 71 and 72 show the average number of mathematics and science units required for graduation in Iowa public schools by enrollment category for 1985-1986 and 1999-2000 to 2003-2004. The statewide average mathematics units required for graduation increased from 2.28 in 2002-2003 to 2.29 in 2003-2004 (Table 71). The 250-399 enrollment category had the largest average mathematics units required for graduation in 2003-2004, 2.53 units. The statewide average science units required for graduation remained the same ( 2.17 units) in 2003-2004 from 2002-2003.

The average science units and the average mathematics units required for graduation was at least 2.00 units for each enrollment category in 2003-2004 (Table 71 and 72).

Table 71

Tables 73 and 74 displays the frequency distributions of mathematics and science units required for graduation by Iowa public school districts in 2003-2004. The largest percentage of districts required 2.0 units of both mathematics and science in 2003-2004. Ninety-five school districts ( 27.5 percent) required 3.0 units or more of mathematics for graduation and 59 districts ( 17.1 percent) required 3.0 units or more of science for graduation in 2003-2004.

## Class Size

Class size reduction for the early elementary grades has been an important goal nationally and for Iowa during the past five years. Nationally the goal is the reduction of early elementary grades to no more than 18 students per teacher. Iowa's goal is an average class size of 17 students for kindergarten through third grade. Funding for class size reduction is available at the federal level through the U.S. Department of Education's Class Size Reduction Program and at the state level through the Iowa Early Intervention Block Grant Program. Class size reduction funding increased over the past 5 years.

Iowa Early Intervention Block Grant Program funding included:

- \$10 million in FY 2000
- \$20 million in FY 2001
- \$30 million in FY 2002
- $\$ 30$ million in FY 2003
- $\$ 29.3$ million in FY 2004

Through the U.S. Department of Education's Class Size Reduction Program, Iowa districts received the following amounts for Iowa class size reduction efforts:

- \$ 9.4 million in FY 2000
- $\$ 10.2$ million in FY 2001
- $\$ 12.8$ million in FY 2002
- $\$ 20.7$ million in FY 2003
- $\$ 20.7$ million in FY 2004

While funding for class size reduction has increased over time, other district resources have declined. Federal and state class size reduction funds may be allocated for activities other than hiring additional teachers. For example, funds may be used for activities such as teacher training.

Average class size is calculated by taking the number of students for a grade level divided by the number of classroom sections for that grade level.

$$
\text { Average Class Size }=\text { Number of Students/Number of Classrooms }
$$

Regular education classrooms are included while special education, art, music, physical education and other pullout classrooms are excluded from the average.

## Class Size Trend

Average class size declined in the early years of the program compared to the 1998-1999 base year, when funds were initially introduced and awareness raised for class size reduction, although the state goal of 17 students per classroom was not met. Beginning with the 2002-2003 school year, average class size began to increase slightly as school districts faced tightened budgets. The increase in average class size continued for the 2003-2004 school year with average class size increasing for all grade levels. The largest increase occurred for first grade where the average class size increased from 18.8 students to 19.1 students per classroom. Despite the increase, the 2003-2004 figures remain below the 1998-1999 averages in all four grades shown (see Table 75 and Figure 25). Kindergarten reported the lowest average class size for 2003-2004 and third grade the largest, reflecting district efforts to focus class size reduction resources towards reducing class size for the early grades.

Figure 25

The trend from 1998-1999 to 2003-2004 was more uniform with average class size declining as enrollment declined for all grade levels. The decrease in average class size for kindergarten outpaced the decline in kindergarten enrollment during that period, with a 3.6 percent decline in average class size and a 1.3 percent decline in enrollment. For first through third grade, the decreases in enrollment were greater than the decreases in average class size (see Tables 76 and 77).

## Class Size by Enrollment Category

Average class size continued to vary by the size of the district in 2003-2004 with the smallest districts experiencing the lowest average class size (see Tables 78-82). The $<250$ category showed the lowest average class size for all grades and was well below the state goal of 17 students per class in each grade level. The averages for the <250 category were substantially lower than the next largest enrollment category. The number of districts and students in the <250 enrollment category has increased since 1998-1999. The number of districts increased from 22 districts to 30 districts and enrollment increased from 4,154 to 5,624 . The largest average class sizes by grade level were reported by the largest and second largest enrollment categories. The 7,500+ enrollment category showed the highest average class size for first and third grade while the 2,500-7,499 was largest for kindergarten and second grade.

## Class Size Distribution

The percentage of very large classrooms declined slightly in 2003-2004. There were no districts with an average class size above 30 students for first and second grades. The percentage of kindergarten classrooms greater than 30 remained the same at 0.1 percent and the third grade declined from 0.3 to 0.1 percent (Table 83).

The percentage of classrooms above the state goal of 17 students per classroom increased in 2003-2004, however, the increase for most grade levels was small at 1 percentage point or less. The exception was first grade which showed the largest increase with the percentage of classrooms above 17 students going from 65.9 percent to 69.4 percent from 2002-2003 to 2003-2004 (see Table 83).

Tables 84-87 and Figures 26-29 provide an overview of the number of classrooms by class size. The number of very large classrooms declined since 1998-1999. For example in 1998-1999 there was one kindergarten classroom with 35+ students. In 2003-2004 the largest kindergarten classroom was 31 students with 1.5 teachers and .5 aides for that classroom. First and second grade showed similar declines with the largest first grade classroom dropping from 35 to 30 students and second grade going from 35 students to 29 students from 1998-1999 to 2003-2004. Third grade also showed a decline although the decrease was not as large. In 1998-1999 the largest third grade classroom was 32 students and in 2003-2004 the largest third grade classroom had 31 students.

## Class Size Summary Statistics

Districts made efforts to increase the number of teachers available for the early elementary grades. The number of teachers increased for all grades levels except third grade since 1998-1999. The number of students declined for each grade level except kindergarten during the same time period. Table 88 provides an overview of the number of students, classrooms, teachers and aides for each grade level from 1998-1999 to 2003-2004. Although third grade continues to show the largest average class size of the early elementary grades, effort has been made to increase the number of teachers for that grade level. From 1998-1999 the number of third graders declined by 2,139 while the number of teachers declined by only 3.9.

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Class Size Survey Files.
Note: The number of students for each grade does not match Basic Educational Data Survey enrollment figures due to the exclusion of multi-age and/or multi-level classrooms from the class size data. *This classroom has one aide in addition to the teacher.

## Class Size Expenditures

The Iowa Early Intervention Block Grant Program allows funds to be used to:

- provide additional support for students, including before and after school programs, tutoring, and intensive summer programs;
- acquire and administer diagnostic reading assessments;
- implement research-based instructional intervention programs for students needing additional support;
- implement all-day, everyday kindergarten programs; and
- provide classroom teachers with intensive training programs to improve reading instruction and professional development in best practices, including, but not limited to, training programs related to instruction to increase students' phonemic awareness, reading abilities and comprehension skills.

Although class size reduction funds may be used for efforts other than hiring additional staff the majority of the funds are used for staff salaries and benefits (see Table 89 and Figure 30). In 2002-2003 (FY 03), 96.8 percent of Iowa Early Intervention Block Grant funds were used for staff salaries and benefits down from 97.2 percent in 2001-2002.

## Technology

## Expenditures for Computer Hardware and Software

Information on total expenditures and average per pupil expenditures for computer software and hardware in Iowa public schools for 1992-1993 to 2002-2003 is shown in Table 90 and Figure 31. Expenditure data is collected through the Certified Annual Financial Report from local districts and area education agencies. The total expenditure on software increased from over $\$ 6.4$ million in 2001-2002 to over $\$ 7.2$ million in 2002-2003. The total expenditure on hardware decreased by about $\$ 2.0$ million between 2001-2002 and 2002-2003. Software per pupil expenditures increased from $\$ 13.19$ in 2001-2002 to $\$ 14.88$ in 2002-2003 ( 12.8 percent). Per pupil expenditures on hardware decreased from $\$ 45.53$ in 20012002 to $\$ 41.71$ in 2002-2003 ( 8.4 percent). The combined software and hardware per pupil expenditures decreased from $\$ 58.72$ in 2001-2002 to $\$ 56.59$ in 2002-2003, a decrease of 3.6 percent.

[^48]Figure 31

## Computer Software and Hardware Per Pupll Expenditures in Iowa Public Schools

 1992-1993 то 2002-2003

[^49]Table 91 lists the total and per pupil expenditures for computer software and hardware by enrollment category for 1994-1995, 1995-1996, and 2000-2001 through 2002-2003. Total software and hardware expenditures increased for the <250, 400-599, and 600-999 enrollment categories between 2001-2002 and 2002-2003. The total software and hardware expenditures decreased between 2001-2002 and 20022003 for the other enrollment categories. Districts within the enrollment category of 400-599 students had the largest increase in average per pupil software and hardware expenditures between 2001-2002 and 2002-2003, $\$ 50.67$ in 2001-2002 versus $\$ 57.88$ in 2002-2003.

[^50]Note: Per pupil expenditures based on Certified Enrollment. Expenditure includes Administrative, Instructional, and all Other Software and Hardware Purchased.

## Availability of Computers

The Department of Education collects technology data from public schools through the Basic Educational Data Survey (BEDS). This information has been collected and used to summarize the availability of computers in public school districts and in the state since 1995-1996.

The statewide ratio of pupils to computers is shown in Figure 32 for 1995-1996 to 2003-2004. This ratio is calculated by dividing the sum of enrollment by the sum of computers. The ratio remained at 3.7 pupils per computer between 2002-2003 and 2003-2004. In 2002-2003 and 2003-2004 students had almost twice as much access to computers at school as they did in 1995-1996 when the ratio was 7.2 pupils per computer.

Figure 32

## Puplls per Computer in Iowa Public Schools 1995-1996 то 2003-2004

Table 92 lists data on the number of districts, number of computers, certified enrollment and pupils per computer by enrollment category between 1995-1996 and 2003-2004. For the majority of the enrollment categories the number of computers continued to increase even though the enrollment decreased.

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Technology Files, and Division of Financial and Information Services, Certified Enrollment Files.
Notes: In 1995-1996, only 86.2 percent of the total 384 school districts reported. The number of computers in 1997-1998 was estimated based on the previous year for one school district. In 1998-1999, all but two school districts reported. For these districts, 1997-1998 figures were used as a best estimate.

Figure 33 presents the pupils per computer in Iowa public schools by enrollment category for the 19951996, 2002-2003 and 2003-2004 school years. The ratio of pupils-to-computers decreased for most enrollment categories between 2002-2003 and 2003-2004. The ratio of pupils-to-computers increased from 4.5 to 4.9 between 2002-2003 and 2003-2004 in the largest enrollment category ( $7,500+$ ). The ratio remained the same between 2002-2003 and 2003-2004 for two enrollment categories, 400-599 students and 2,500-7,499 students.

Figure 33

## Puplls per Computer in Iowa Public Schools <br> by Enrollment Category 1995-1996, 2002-2003 AND 2003-2004

[^51]The difference in the number of computers and pupil-to-computer ratios between elementary and secondary schools in Iowa public districts by enrollment categories in 2000-2001 to 2002-2003 can be reviewed in Table 93.

Table 93

# Number of Computers and Pupll-to-Computer Ratios in Iowa Public School Districts by <br> Grade Level within Enrollment Category 2000-2001 то 2002-2003 

[^52]The collection of this information changed between 2002-2003 and 2003-2004. In 2002-2003 the data was collected at the district level and in 2003-2004 the data was collected at the individual school level. Table 94 lists the number of computers and pupils per computer by enrollment category for each building level (high school, junior high school, etc.) in 2003-2004. For every enrollment category the ratio of pupils-to-computers was higher at the elementary school level than the ratio at the high school, junior high school, and middle school levels.

## Project EASIER

## (Electronic Access System for Iowa Education Records)

State and local data collection requirements have increased due to reporting requirements for No Child Left Behind (NCLB) and other federal initiatives, such as the Performance Based Data Management Initiative (PBDMI), etc.

Project EASIER (Electronic Access System for Iowa Education Records) is the Iowa Department of Education's initiative involving the transfer of individual student records. The major components of Project EASIER are: 1) sending individual student data electronically from Iowa school districts to the Department of Education to develop state and federal reports, 2) electronically sending high school transcripts to colleges and universities, and 3) enabling school districts to electronically exchange student records when students transfer to other school districts within the state of Iowa.

The mission of the Project is to reduce data burden, encourage better decision-making by establishing and maintaining a cost-effective method of accessing and transferring accurate and timely education information among school districts, postsecondary institutions and the Iowa Department of Education.

The majority of Iowa's public school districts maintain their student data in electronic student information systems. In 2003-2004 and in previous years the data elements in a local district's student information system were mapped to a set of standard codes. The standard set of codes allows for the transmission of data from one file format to a totally different file format with neither the sender nor receiver having to make any changes to their files. This is important for Project EASIER participants because regardless of the student information system software in place at a local school district, the system can be used without modifying existing local codes.

The major focus of the Project in 2003-2004 was to obtain statewide participation of all school districts, expand the amount of information collected, and the creation of a uniform statewide student identification system.

In the past five years, participation in Project EASIER has increased from 40 percent of public school districts ( 150 districts) in 1998-1999 to 100 percent ( 370 districts) participation in 2003-2004 (Table 95 and Figure 34).

[^54]Table 97 shows the number of public school districts that submitted part of their data for the annual Basic Educational Data Survey (BEDS) reporting requirements through Project EASIER. The number of districts that transmitted data through Project EASIER increased by approximately 11 percent between 2002-2003 and 2003-2004. In 2003-2004, 89.7 percent of public school districts transmitted data electronically via Project EASIER for the Spring BEDS data collectionn.

Table 97

## Districts Transmitting Basic Educational Data Survey via Project EASIER, 1995-1996 то 2003-2004

| Note: | Transmission Log. <br> There are currently seven student-based annual BEDS reports transmitted electronically by <br> participating Project EASIER sites. |

Note: There are currently seven student-based annual BEDS reports transmitted electronically by participating Project EASIER sites.

Project EASIER was expanded to enable some high schools to send transcripts electronically to Iowa State University and the University of Northern Iowa in 2001-2002. In 2002-2003 a new interactive webbased system was implemented to increase the efficiency of BEDS transmissions. By the end of the 2003-2004 school year, all public school districts were participating in Project EASIER. In the summer of 2004, an expanded list of data elements to be collected beginning in the fall of 2004 was released and uniform statewide student identifiers were assigned to students in Iowa public schools. The next phases of Project EASIER include the sending of electronic transcripts from all Iowa schools to postsecondary institutions and the electronic transmission of data from district-to-districts as students transfer schools within the state of Iowa.

For additional information on Project EASIER, visit the Project EASIER web site at: http://www.state.ia.us/educate/fis/pre/pe/index.html

## Early Childhood Education

The Iowa Department of Education collects data on early childhood programs through the Basic Educational Data Survey (BEDS) each spring from public school districts in Iowa. Data is collected at the district level on preschool programs, school age child care programs and kindergarten programs.

## Kindergarten Programs

Data collected the through the spring BEDS indicate that all day, every day, 2 semester kindergarten was the predominant kindergarten type in Iowa public schools for the 2003-2004 school year. During the 2003-2004 school year, 351 public districts ( 95.1 percent) offered all day kindergarten as their predominant kindergarten program. In addition, two districts offered an all day, every day, 3 trimester kindergarten as their predominant type. Since the 2000-2001 school year, 90.0 percent or more of Iowa districts have chosen all day, everyday kindergarten as the predominant kindergarten program.

The second most popular kindergarten program offered by Iowa public school districts in 2003-2004 was half day, every day, 2 semester kindergarten. A number of districts indicated that they use this program for students not ready for the regular all day, every day, 2 semester kindergarten offered by the district (see Table 98).

Table 98

| Number and Percent of Iowa Public School Districts Offering |
| :---: |
| All-Day, Everyday, Two-Semester |
| Kindergarten Programs - 1985-1986 to 2003-2004 |

[^55]In 2003-2004, larger districts were less likely to report all day, every day, 2 semester kindergarten as their predominant kindergarten type than smaller districts. For example, in the 2,500-7,499 enrollment category 82.6 percent of districts reported all day, every day, 2 semester kindergarten as the predominant kindergarten type versus 98.7 percent of districts in the 400-599 enrollment category. Over 93.1 percent of districts in the five smallest enrollment categories reported all day, every day, 2 semester kindergarten as their predominant kindergarten type in 2003-2004. Less than 90.0 percent of districts in the two largest enrollment categories reported all day, every day, 2 semester kindergarten as their predominant kindergarten type (see Table 99 and Figure 35).

Note: Prior to 2002-2003 districts reported one program type as their predominant kindertargen program. Starting in 2002-2003 the predominant program was selected based on the program offered by largest number of buildings in the district.
*In 2003-2004, East Monona District sent all their K-12 students to another district.

Figure 35

## Percent of Iowa Public School Districts with All-Day, Everyday, Two-Semester Kindergarten Program by Enrollment Category, 2003-2004

[^56]
## Child Development/Preschool Programs

The number of students reported as attending child development/preschool programs increased in 2003-2004 for the third year in a row (see Tables 100 and 101). In 2003-2004, districts reported 9,778 students attending a child development/preschool program, up 42.5 percent from the 1997-1998 school year. Districts reported data on Head Start, Child Development Coordinating Council, Empowerment, Tuition and Other Child Development/Preschool programs in 2003-2004. In 2003-2004 the Tuition Child Development/Preschool program reported the largest number of children with 4,454 in attendance.

## Student Performance

The student performance chapter contains grades 4,8 , and 11 student achievement on the Iowa Tests of Basic Skills (ITBS) and the Iowa Tests of Educational Development (ITED) in reading comprehension and mathematics, grade 4 and 8 student performance on the NAEP reading and mathematics, and the average scores for high school senior test takers on the American College Testing Assessment (ACT), the Scholastic Assessment Test (SAT), and the Advanced Placement (AP) tests from various external sources. The most used internal data source, the Basic Educational Data Survey (BEDS), is collected annually in the spring and fall by the Iowa Department of Education. The BEDS data used in the student performance chapter provide information pertaining to Iowa dropouts for grades 7-12, high school graduation rates, high school graduate intentions, and Iowa postsecondary enrollment options for high school students. The National Center for Educational Statistics (NCES) is another external source for grades 9-12 dropout and high school graduation cross-state comparisons.

There are two sections in the student performance chapter. The first section reports the State Indicators of Student Success data required by Iowa Administrative Code. The second section provides trend data on student achievement and performance comparisons between Iowa, other states, and the nation. Comparisons are also made across enrollment categories, gender, race/ethnicity, and other subgroups when data is available.

## State Indicators of Student Success

State indicators are required to be collected and reported by schools or school districts pursuant to Iowa Administrative Code - 12.8(3). The requirements for the state indicators are: 1) The percentage of all fourth, eighth, and eleventh grade students achieving a proficient or higher reading status on the ITBS and ITED; 2) The percentage of all fourth, eighth, and eleventh grade students achieving a proficient or higher mathematics status on the ITBS and ITED; 3) The percentage of all eighth and eleventh grade students achieving a proficient of higher science status on the ITBS and ITED; 4) The percentage of students considered as dropouts for grades 7 to 12 and the percentage of the high school students who graduate; 5) The percentage of high school seniors who intend to pursue postsecondary education/ training; 6) The percentage of high school students achieving an ACT national average score or above and the percentage of students achieving an ACT score of 20 or above; and 7) The percentage of high school graduates who complete a "core" high school program of four years of English-language arts and three or more years each of mathematics, science, and social studies.

Subgroup data are shown for gender, race/ethnicity, socioeconomic status (determined by eligibility for free or reduced price lunch), disability status (determined by the presence of an individualized education plan - IEP), primary language status (determined by English and English Language Learner), and migrant/non-migrant status (defined by Title I requirements) where available.

The following statements, prepared by the staff at Iowa Testing Programs have been included to provide guidance in interpreting biennium period, national norm effect, and achievement level definitions.

The biennium summaries of Iowa statewide achievement data describe student performance in reading and mathematics on the Iowa Tests of Basic Skills (ITBS) and the Iowa Tests of Educational Development (ITED). The purpose of the summaries is to use scores from two consecutive school years to describe annual achievement changes.

For many years, statewide achievement data from the ITBS and ITED were shown as average scores for each of grades 3-12 inThe Annual Condition of Education Report. Beginning in the 1996-1997 school year, achievement levels were used to report system and building results to each school district in Iowa. These achievement levels also have been made available to describe Iowa statewide achievement trends in the Report. One advantage of using achievement levels instead of only average scores is that achievement levels permit the user to view a broad range of student performance rather than simply seeing how the average student in each grade scored. That is, with achievement levels, the performance of high achieving and low achieving groups of students can be tracked over time; the use of average scores alone only permits the tracking of the average student.

Scores are combined for pairs of consecutive years for the biennium reporting for several reasons. The merging of test results from two years provides greater stability in the information than would be apparent if results from each single year were used. Because all Iowa schools have not always tested every year in each of the three grades used for reporting ( 4,8 , and 11 ), annual data are subject to fluctuations due to these inconsistent annual testing patterns. Two-year averages help overcome this problem.

Several additional pieces of information about the achievement level summaries are needed for interpretive purposes. These are outlined below:

1. The approximate number of students per grade per year upon which the percentages for 2003-2004 are based are: grade $4,37,900$; grade $8,41,600$; and grade $11,36,400$.
2. Forms K and L of both test batteries were first used in Iowa in the 1993-1994 school year. Therefore, that year was chosen to develop baseline data that schools might use for beginning to establish goals and for describing local achievement trends. The baseline biennium is 1993-1995. Beginning in 2001-2002, Forms A and B with 2000 national norms were used in Iowa instead of Forms K and L , and the data for that year were adjusted to 1992 norms to compute the 2000-2002 biennium values reported here. For the 2001-2003 and 2002-2004 bienniums, however, only the 2000 norms were used.
3. The Achievement Levels Report for the ITBS and ITED is provided to Iowa schools to help describe the level of performance of student groups and monitor the progress of groups over time. For each of the three main achievement levels-Low, Intermediate, and High-descriptors are included on the report to identify what the typical student in each level is able to do. The Iowa Department of Education has combined the Intermediate and High performance levels to define a single achievement level called "Proficient" as a student performance indicator. Proficient and Less-thanProficient are labels being used to describe the performance of groups that are at or above an acceptable standard or below that standard, respectively. For accountability purposes, the Iowa Department of Education uses the national percentile rank scale from the ITBS and ITED Tests. Low performance is the range 1-40, Intermediate is 41-89, and High is 90-99. Consequently, the Proficient range are percentile ranks 41-99 and the percentile ranks 1-40 are regarded as Less-thanProficient.
4. Comparisons of results from one grade to another are not appropriate because the corresponding descriptions of performance are not exactly the same from grade to grade. For example, "Low" in reading comprehension does not mean exactly the same thing at grade 4 and grade 11.
5. Comparisons from one subject area to another are not appropriate because the corresponding descriptions of performance are much different from subject to subject. For example, "Low"in grade 4 reading comprehension does not mean the same thing as "Low" in grade 4 mathematics.
6. Separate tables show achievement level performance for students by gender, racial/ethnic, disability, socioeconomic, and primary language and migrant subgroups. These subgroups vary in size in a given biennium, and each varies in size from year to year. The subgroup data should not be averaged to obtain an overall value that matches the data for the total grade group.

## Subgroup IowaStudent Counts for ITBS and ITED Reading, Mathematics, and Science Test-Takers

The first three state indicators are Iowa student performances on ITBS and ITED reading, mathematics and science. They are defined as the percentages of all fourth, eighth, and eleventh grade students achieving a proficient or higher level on reading comprehension and mathematics and the percentages of all eighth and eleventh grade students achieving a proficient or higher level on science. Table 102 shows the approximate average number of students tested by grade and by subgroup for ITBS and ITED Reading Comprehension for the biennium periods 2001-2003 and 2002-2004 while Table 103 shows the approximate average number of students tested by grade and by subgroup for ITBS and ITED mathematics for the same biennium periods. Table 104 shows the approximate average number of grade 8 and 11 students tested by subgroup for ITBS and ITED science for the biennium periods 2001-2003 and 2002-2004. The numbers of students tested in Tables 102 to 104 include both public and nonpublic school participants.

Source: Iowa Testing Programs, University of Iowa.
Notes: Percentages for each biennium period represent average percentages of proficient students for the two school years represented, e.g. 2001-2003 represents the average for the 2001-2002 and the 2002-2003 school years. A student designated as proficient can, at a minimum, do the following: Usually understands factual information and new words in context.
Usually is able to make inferences and interpret either nonliteral language or information in new contexts.
Often can determine a selection's main idea and analyze its style and structure.
*Primary Language Status is classified by English and English Language Learner and determined according to the following definition: English Language Learner refers to a student who has a language other than English and the proficiency in English is such that the probability of the student's academic success in an English-only classroom is below that of an academically successful peer with an English language background.

Notes: Percentages for each biennium period represent average percentages of proficient students for the two school years represented, e.g. 2001-2003 represents the average for the 2001-2002 and the 2002-2003 school years. A student designated as proficient can, at a minimum, do the following:

Is developing an understanding of many math concepts; usually is able to solve simple and complex word problems and use estimation methods; and can interpret data from graphs and tables.
*Migrant status is defined as migrant or non-migrant as follows: Migrant - a student is considered as migrant if he or she has moved in the past 36 months from one district to another so that the parents could obtain temporary or seasonal employment in agriculture as their principal means of livelihood.

[^88]
## High School Graduation Rates

Indicator: Percentofhighschoolstudentswhograduate, reportedforallstudents, bygender,andbyrace/ ethnicity.

Figure 93
Iowa Public School Graduation Rates
Graduating Classes of 1996 through 2003

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, High School Completers and Dropout Files.
Note: A high school graduate includes regular diploma, and other diploma recipients. Graduation rates were calculated dividing the number of high school graduates in a given year by the sum of the number of high school graduates in that year and dropouts over a four year period. More specifically, the total dropouts include the number of dropouts in grade 9 in year 1, the number of dropouts in grade 10 in year 2, the number of dropouts in grade 11 in year 3, and the number of dropouts in grade 12 in year 4 . The high school graduation rate in year 4 equals the number of high school graduates in year 4 divided by the number of high school graduates in year 4 plus the sum of dropouts in grades 9 through 12 from years 1 through 4 respectively.

Figure 94

[^90]
## Probable Postsecondary Success

Indicator: Percentage of students achieving an ACT score above the national average and the percentage of students achieving an ACT score of 20 or above.

Figure 98

## Percent of Iowa ACT Participants Achieving An ACT Score Above the National Average and an ACT Score of 20 or Above 1991-2004

Source: American College Testing Program, The High School Profile Report for Iowa.
Note: $\quad$ The actual percentage of lowa students with ACT scores above the national average are shown where the national average score is a whole number. Years shown as estimates are marked with an asterisk(*) where the national average score is not a whole number.

Figure 99
Percent of Iowa ACT Participants Completing
Core High School Program - 1991-2004

## Iowa Testing Programs

Iowa Testing Programs (ITP) at the University of Iowa develop standardized achievement tests for use nationally in grades K-12 and administer statewide achievement testing programs for the schools of Iowa. Iowa Testing Programs offer two achievement test batteries, the Iowa Tests of Basic Skills (ITBS), for students in grades kindergarten through 8; and the Iowa Tests of Educational Development (ITED), for students in grades 9-12. ITBS and ITED are the primary academic assessments for Iowa students in grades 3 through 12. The State Board of Education request student performance on ITBS and ITED reading comprehension and mathematics for all grades 4,8 , and 11 and student performance on ITBS and ITED science for grades 8 and 11 as state indicators. All Iowa public schools have been evaluated by student performance and improvement on the ITBS and ITED for purposes of the No ChildLeft Behind (NCLB) accountability. During the 2003-2004 school year, 370 Iowa public school districts and approximately 200 nonpublic schools participated in the ITP achievement assessments.

## Iowa Tests of Basic Skills (ITBS)

The ITBS program offers levels 5-8 tests for students in kindergarten through grade 2 and levels 9-14 tests for students in grades 3 through 8 .

The ITBS levels 9-14 battery includes 13 tests plus two additional tests for Level 9 only. The tests are listed below: 1) Vocabulary, 2) Reading Comprehension, 3) Spelling, 4) Capitalization, 5) Punctuation, 6) Usage and Expression, 7) Math Concepts and Estimation, 8) Math Problem Solving and Data Interpretation, 9) Math Computation, 10) Social Studies, 11) Science, 12) Maps and Diagrams, and 13) Reference Materials. The two additional tests are Word Analysis and Listening.

## Iowa Tests of Educational Development (ITED)

The ITED program offers levels 15-17/18 tests for students in grades 9-12. The battery includes: 1) Vocabulary, 2) Reading Comprehension, 3) Language: Revising Written Materials, 4) Spelling, 5) Mathematics: Concepts and Problem Solving, 6) Computation, 7) Analysis of Social Studies Materials, 8) Analysis of Science Materials, and 9) Sources of Information.

## ITBS and ITED Student Norms

Since 2001-2002, there has been a transition of Forms A and B of the ITBS and ITED with 2000 national norms for Iowa students to replace Forms K and L with 1992 national norms. According to the Iowa Testing Programs, scores on Forms A and B of the ITBS and ITED have been equated so that the same norms can be used with both.

Table 105 shows how 2001-2002 Iowa students ranked in terms of 2000 national norms for grades 4, 8 , and 11. Table 106 reflects how Iowa and national students performed in grades 3-8 ITBS average and grades 9-11 ITED average in terms of their Core Total scores. The Core Total is the average of the standard scores for Reading Total, Language Total, and Math Total. The Core Total excludes social studies, science, and other subject areas. Selected national percentile rank ranges are listed in the left column. Overall, 2001-2002 Iowa students performed better than the nation. There were 68, 62 and 70 percent Iowa students above the national median in grade 4,8 , and 11 respectively (Table 105). The grades 9-11 average was comparable to the grades 3-8 average. Approximately two-thirds of Iowa students scored in the top half of students nationally and about one-third of the Iowa students scored in the lower half nationally in 2001-2002 (Table 106).

Table 105

Source: Iowa Testing Programs, University of lowa.

Figure 100 compares ITBS Core Total score distributions for Iowa students in grade 4 in 1993-1994 and 2001-2002 in terms of the percent of students performing within selected national student percentile rank ranges. Similar comparisons are presented in Figures 101 and 102 for Iowa students in grades 8 and 11 between 1993-1994 and 2001-2002. The 1993-1994 Iowa data were obtained one year after the 1992 national standardization, while the 2001-2002 Iowa data were available one year after the 2000 national standardization.

The purpose of the comparison is to show how Iowa students performed compared to their national peers in the two different school years. Since Iowa had a higher percent of students' scores at the higher percentile rank ranges (50-75, 75-90, and 90-99) and a lower percent of student scores at the lower percentile rank ranges ( $1-10,10-25$, and 25-50) than the nation, Iowa students performed better than the nation in all grades shown and in both years shown. More specifically, a significant high percent of Iowa students scored above the $90^{\text {th }}$ percentile for the nation ( 19 percent, 16 percent, and 21 percent for Iowa grades 4, 8 and 11 respectively) while a significant low percent of Iowa students scored below the $10^{\text {th }}$ percentile for the nation ( 3 percent for Iowa grades 4 and 11 and 5 percent for Iowa grade 8) in 2001-2002. A similar picture can be seen for 1993-1994 data (Figures 100 to 102).

In 2001-2002, there was a bigger gap between the Iowa percent and the national percent in each percentile rank range for students in grade 4 than in 1993-1994, Iowa $4^{\text {th }}$ grade students have improved more compared to the nation (Figure 100). Iowa students in grades 8 and 11 improved less relative to their national peers in 2001-2002 compared to 1993-1994 (Figures 101 and 102).

Figure 100

# Comparison of the Percent of Iowa Fourth Grade Students Performing within Selected National Student Percentile Rank Ranges: Core Total Scores 1993-1994 vs. 2001-2002

Figure 102

## Comparison of the Percent of Iowa Eleventh Grade

 Students Performing within Selected National Student Percentile Rank Ranges: Core Total Scores 1993-1994 vs. 2001-2002

## ITBS and ITED Achievement Level Distributions

Student achievement level distributions are reported as merged percentage points for pairs of consecutive year in biennium periods. The achievement level distributions are shown in the biennium periods 1993-1995 through 2002-2004 for all students in grades 4, 8, and 11 in ITBS/ITED Reading Comprehension and Mathematics. Forms K and L of both ITBS and ITED with 1992 national norms were first used in Iowa in the 1993-1994 school year and Forms A and B of both ITBS and ITED with 2000 national norms have been used since 2001-2002. There were only two biennium periods, 2001-2003 and 2002-2004, where achievement level distribution data was available for all students in grades 8 and 11 in ITBS/ITED Science with the 2000 national norms.

The terms "Low", "Intermediate", and "High" are used to designate student achievement levels. Descriptions for achievement levels, Low, Intermediate, and High, are shown in each figure to identify the student performance characteristics for a given grade and subject area.

## Achievement Levels for Reading Comprehension

Figures 103 through 105 show the reading comprehension achievement level distribution trends for all students in grades 4, 8, and 11 based on 1992 national norms for the 1993-1995 through 2001-2003 biennium periods. There is an additional point in the 2001-2003 biennium period to start a new trend for the last two biennia based on the 2000 national norms in Figure 103 due to the difference between the 1992 norms and 2000 norms. There were no new starting points for 2001-2003 biennium with 2000 norms in Figures 104 and 105 because there was no norm difference for grades 8 and 11 in reading comprehension.

Figure 103

## ITBS Reading Comprehension - Grade 4 Percentages for Iowa Achevement Levels Biennium Periods 1993-1995 to 2002-2004

Biennium Period

[^92]There was approximately a 4 percentage point increase at the High achievement level and a 1.3 percentage point decrease at the Low achievement level in 2001-2003 biennium over the 2000-2002 biennium for grade 4 reading. In 2002-2004, there was a slight increase at the High achievement level and a slight decrease at the Low achievement level from the prior biennium (Figure 103).

The grade 8 students performing at the Low achievement level remained unchanged and the students performing at the High achievement level increased 0.9 percentage points in the 2001-2003 biennium over the 2000-2002 biennium. The students performing at the High achievement level remained nearly the same in the 2002-2004 biennium from the 2001-2003 biennium (Figure104).

Figure 104

## ITBS Reading Comprehension - Grade 8 Percentages for Iowa Achievement Levels Biennium Periods 1993-1995 to 2002-2004

Source: Iowa Testing Programs, University of lowa.
Notes: The descriptions below indicate how the typical grade 8 student at each achievement level performs with respect to the ITBS Reading Comprehension test:

HIGHPERFORMANCE LEVEL
Understands factual information; draws conclusions and makes inferences about the motives and feelings of characters; makes applications to new situations, identifies the main idea; evaluates the style and structure of the text; and interprets nonliteral language.
INTERMEDIATE PERFORMANCE LEVEL
Understands some factual information; sometimes can draw conclusions and make inferences about the motives and feelings of characters; and apply what has been read to new situations, and sometimes can identify the main idea, evaluate the style and structure of the text, and interpret nonliteral language.
LOW PERFORMANCE LEVEL
Understands little factual information; can seldom draw conclusions or make simple inferences about characters; usually cannot apply what has been read to new situations; can rarely grasp the main idea, evaluate the style and structure of the text, and interpret nonliteral language.

Percentages for each biennium period represent average percentages for the two school years represented, e.g., 1997-1999 represents the average percent of students at each achievement level for the 1997-1998 and 1998-1999 school year.

Figures may not total 100 percent due to rounding.

The grade 11 students performing at the Low achievement level increased .10 percentage points while the students performing at the High achievement level increased 0.6 percentage points in the 2001-2003 biennium over the 2000-2002 biennium. There was a slight decrease at the High achievement level and a slight increase at the Low achievement level in the 2002-2004 biennium (Figure 105).

In general, a higher percentage of students have performed at the High achievement level for grade 4 since the 2000-2002 biennium. However, the percentage slightly increased for grade 11 students performing at the Low achievement level in the 2001-2003 and 2002-2004 biennia.

Figure 105

## ITED Reading Comprehension - Grade 11

Percentages for Iowa Achievement Levels Biennium Periods 1993-1995 to 2002-2004

Source: Iowa Testing Programs, University of Iowa.
Notes: The descriptions below indicate how the typical grade 11 student at each achievement level performs with respect to the ITED test tasks that determine the Reading Comprehension score:

HIGHPERFORMANCELEVEL
Understands factual information; infers the traits and feelings of characters: identifies the main idea; identifies author viewpoint and style, interprets nonliteral language; and judges the validity of conclusions.
INTERMEDIATE PERFORMANCE LEVEL
Understands some factual information; sometimes can make inferences about characters, identify the main idea, and identify author viewpoint and style; occasionally can interpret nonliteral language and judge the validity of conclusions.
LOW PERFORMANCE LEVEL
Understands little factual information; seldom makes simple inferences; rarely grasps the main idea; and usually cannot identify author viewpoint and style, interpret nonliteral language, or judge the validity of conclusions.

Percentages for each biennium period represent average percentages for the two school years represented, e.g., 1997-1999 represents the average percent of students at each achievement level for the 1997-1998 and 1998-1999 school year.

Figures may not total 100 percent due to rounding.

## Achievement Levels for Mathematics

The mathematics achievement level distributions for students in grades 4,8 , and 11 for biennium periods 1993-1995 through 2001-2003 with 1992 national norms are shown in Figures 106 through 108. An additional point starts a new trend in grades 8 and 11 for each achievement level in the 20012003 biennium period based on the 2000 national norms (Figures 107 and 108). There was no extra start point in Figure 106 due to no norm difference in mathematics for grade 4.

In grade 4 , a total of 2.7 percent more students were classified at the High achievement level while 2.7 percent fewer students were classified at the Low achievement level in 2001-2003 biennium compared to the 2000-2002 biennium. In the 2002-2004 biennium, there was a 1.6 percentage point increase at the High achievement level and a 1.8 percentage point decrease at the Low achievement level for grade 4 mathematics over the 2001-2003 biennium.

Figure 106

## ITBS Mathematics - Grade 4 <br> Percentages for Iowa Achievement Levels Biennium Periods 1993-1995 to 2002-2004

[^93]Figures may not total 100 percent due to rounding.

Figures 107 and 108 show a slight increase in grade 8 and a slight decrease in grade 11 at the High achievement level and an opposite trend at Low achievement level in mathematics during the 20022004 biennium for grades 8 and 11 .

Figure 107

## ITBS Mathematics - Grade 8 Percentages for Iowa Achevement Levels Biennium Periods 1993-1995 тo 2002-2004

Source: lowa Testing Programs, University of lowa.
Notes: The descriptions below indicate how the typical grade 8 student at each achievement level performs with respect to the ITBS test tasks that determine the Mathematics Total score.
HIGH PERFORMANCE LEVEL
Understands math concepts and is developing the ability to solve complex word problems, use a variety of estimation methods and interpret data from graphs and tables.
INTERMEDIATE PERFORMANCE LEVEL
Is beginning to develop an understanding of most math concepts and to develop the ability to solve word problems, use a variety of estimation methods, and interpret data from graphs and tables.
LOW PERFORMANCE LEVEL
Understands little about math concepts, is unable to solve most simple word problems or use estimation methods, and seldom able to interpret data from graphs and tables.

Percentages for each biennium period represent average percentages for the two school years represented, e.g., 1997-1999 represents the average percent of students at each achievement level for the 1997-1998 and 1998-1999 school year.

Figures may not total 100 percent due to rounding.

Figure 108

## ITED Mathematics - Grade 11 Percentages for Iowa Achevement Levels Biennium Periods 1993-1995 to 2002-2004

Source: Iowa Testing Programs, University of lowa.
Notes: The descriptions below indicate how the typical grade 11 student at each level performs with respect to concepts and problems in the ITED Mathematics test:
HIGH PERFORMANCE LEVEL
Understands how to apply math concepts and procedures, makes inferences with quantitative information, and solves a variety of novel quantitative reasoning problems.
INTERMEDIATE PERFORMANCE LEVEL
Is beginning to develop the ability to apply a variety of math concepts and procedures, make inferences about quantitative information, and solve a variety of novel quantitative reasoning problems.
LOW PERFORMANCE LEVEL
Demonstrates little understanding about how to apply math concepts and procedures, generally cannot make inferences with quantitative information, and cannot solve most novel quantitative reasoning problems.
Percentages for each biennium period represent average percentages for the two school years represented, e.g., 1997-1999 represents the average percent of students at each achievement level for the 1997-1998 and 1998-1999 school year.

Figures may not total 100 percent due to rounding.

## Achievement Levels for Science

Figure 109 shows ITBS science achievement level distributions for students in grade 8 and Figure 110 shows ITED science achievement level distributions for students in grade 11. The Annual Condition of Education started to report science data for the first time in 2003. Therefore, only two biennium period data for science assessment are available (2001-2003 and 2002-2004) in the current annual report.

Figure 109

## ITBS Science - Grade 8 Percentages for Iowa Achevement Levels Biennum Periods 2001-2003 and 2002-2004

Source: Iowa Testing Programs, University of lowa.
Notes: The descriptions below indicate how the typical grade 8 student at each achievement level performs with respect to the ITBS Science test:

HIGH PERFORMANCE LEVEL
Usually understands ideas related to Earth and the universe and to the life sciences. Understands ideas related to the physical sciences and is able to demonstrate the skills of scientific inquiry.
INTERMEDIATE PERFORMANCE LEVEL
Sometimes understands ideas related to Earth and the universe, the life sciences, and the physical sciences. Often can demonstrate the skills of scientific inquiry.
LOW PERFORMANCE LEVEL
Sometimes understands ideas related to Earth and the universe but seldom understands ideas about the life sciences or the physical sciences. Rarely demonstrates the skills of scientific inquiry.

Percentages for each biennium period represent average percentages for the two school years represented, e.g., 2001-2003 represents the average percent of students at each achievement level for the 2001-2002 and 2002-2003 school year.

Figure 110

ITED Science - Grade 11 Percentages for Iowa Achevement Levels Biennium Periods 2001-2003 and 2002-2004

Source: lowa Testing Programs, University of lowa.
Notes: The descriptions below indicate how the typical grade 11 student at each achievement level perform with respect to the ITED Science test:

HIGH PERFORMANCE LEVEL
Makes inferences and predictions from data, recognizes the rationale for and limitations of scientific procedures, and usually judges the relevance and adequacy of information.
INTERMEDIATE PERFORMANCE LEVEL
Sometimes makes inferences or predictions from data, judges the relevance and adequacy of information, and recognizes the rationale for and limitations of scientific procedures.
LOW PERFORMANCE LEVEL
Rarely makes inferences or predictions from data, judges the relevance and adequacy of information, or recognizes the rationale for and limitations of scientific procedures.

Percentages for each biennium period represent average percentages for the two school years represented, e.g., 2001-2003 represents the average percent of students at each achievement level for the 2001-2002 and 2002-2003 school year.

## American College Testing (ACT) Assessment

American College Testing designed the ACT Assessments to measure high school students' general educational development and ability to succeed at the college level. A composite ACT score measures overall educational development and is based on assessments for English, mathematics, reading, and science reasoning. The ACT scores range from a low of 1 to a high of 36 and data is reported for various subgroups of students. Subgroups reported in this report include high school program type and gender. High school program types are classified as "core" and "less than core". ACT defines "core" as high school programs consisting of four years of English, and three or more years each of mathematics, natural science, and social studies. Students not meeting the "core" program standard are considered "less than core" completers.

Figure 111 provide the percentage of Iowa graduates that took the ACT Assessment for years 1985 through 2004 (also see Table 109). The percentage increased from 66.0 percent in 2003 to 67.0 percent in 2004.

Figure 111

## Percent of Iowa Graduates Taking the ACT Assessuent 1985-2004

Source: American College Testing Program, The High School Profile Report for lowa.

## ACT Composite Score Comparisons of Iowa, the Nation, and the Midwest States

Table 107 details Iowa's rank in the nation of average composite ACT scores. Iowa's ACT average composite score remained at 22.0 for the sixth consecutive year. Wisconsin and Minnesota lead the nation (22.2) and Iowa ranked third among the states where the ACT Assessment test has been taken by more than 50 percent of high school graduates in 2004. Iowa has ranked third or above in the nation for all years shown (1989-2004).

Table 107

## Iowa's Rank n the Nation on Average Composite ACT Scores Among States where ACT is the Primary College Entrance Examination, 1989-2004

| Graduating Class | ACT Average Composite Score | National Rank |
| :---: | :---: | :---: |
| 1989 | 21.8 | 2 |
| 1990 | 21.8 | 1 tied with WI |
| 1991 | 21.7 | 1 tied with WI |
| 1992 | 21.6 | 1 tied with WI |
| 1993 | 21.8 | 1 tied with WI |
| 1994 | 21.9 | 1 |
| 1995 | 21.8 | 3 |
| 1996 | 21.9 | 3 |
| 1997 | 22.1 | 2 tied with MN |
| 1998 | 22.1 | 3 |
| 1999 | 22.0 | 3 |
| 2000 | 22.0 | 2 tied with MN |
| 2001 | 22.0 | 3 |
| 2002 | 22.0 | 3 |
| 2003 | 22.0 | 2 tied with MN |
| 2004 | 22.0 | 3 |

Source: American College Testing Program, ACT assessment results, Summary Report for lowa.

Average ACT composite scores for Iowa, midwest states, and the nation for graduating classes 2002 through 2004 are displayed in Table 108. Comparisons of ACT composite scores between states are valid only for the 25 states where the ACT is the predominant test, defined as those states where at least 50 percent of graduates take the ACT exam. States with fewer than 50 percent taking the ACT exam may have a sample of students not representative of that state's overall student population. All midwest states except Illinois had average composite scores higher than the national average in 2004.

Table 108

| ACT Average Composite Scores for Iowa, the Nation and Midwest States - 2002 то 2004 |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Iowa and National ACT Average Composite Scores 1991-2004

Source: American College Testing Program, The High School Profile Report for lowa.

## ACT Score Comparisons for English, Mathematics, Reading, and Science Reasoning

Average ACT scores by skill area (English, Mathematics, Reading, and Science Reasoning) for Iowa and the Nation are displayed in Table 110 and Figures 113 through 116. In the areas of reading and science reasoning, the national average made a 0.1 point increase on Iowa's average. However, Iowa had at least a 1.0 point higher average ACT score in each of the four skill areas in 2004.

Table 110
Average ACT Scores for Iowa and the Nation
Graduating Classes 1991-2004

| Iowa |  |  |  |  |  |  |  |  |  |  |  | Nation |  |  |

## ACT Scores for Core and Less than Core Students

ACT standards for core high school programs are displayed in Table 111. ACT defines the collegepreparatory core curriculum as at least four years of English and at least three years each of mathematics, natural sciences, and social studies. Core mathematics and natural science courses are beyond the introductory level. For example, a typical minimal core mathematics course might include Algebra I, Algebra II, and Geometry one year each. A typical minimal core natural science course might include one year each of General Science, Biology, and Chemistry or Physics.

Table 111

## ACT Standards for Core High School Programs

| Core Area | Years | Course | Credit |
| :--- | :--- | :--- | :--- |
| English | 4 or more | English 9, 10, 11, 12 | 1 year each |
| Mathematics | 3 or more | Algebra I \& II, Geometry <br> Trigonometry \& calculus (not precalculus), | $1 / 2$ year each |
| Social Studies | 3 or more | Other math courses beyond Algebra II, <br> Computer math/computer science | American history, world history, <br> American government |
| Natural Science | 3 or more | Economics, geography, <br> psychology, other history <br> General/physical/earth science, biology, <br> chemistry, physics | 1 year each each |

Source: American College Testing Program, ACT Assessment 2004 Results.

The percent of Iowa ACT participants taking a core high school program has remained steady at 66.0 percent since 1999. Nationally, that percentage has decreased from 61.0 percent in 2000 to 56.5 in 2004. Table 112 and Figure 117 provide the trend of the percent of ACT participants in a core high school program from 1991 to 2004.

Table 112

| Percent of ACT Participants Taking Core High School Program |
| :---: |
| 1991-2004 |

| Graduating Class | Iowa | Nation |
| :---: | :--- | :---: |
| 1991 | $58.0 \%$ | $48.6 \%$ |
| 1992 | 59.4 | 50.4 |
| 1993 | 61.6 | 51.7 |
| 1994 | 62.2 | 53.7 |
| 1995 | 63.1 | 56.0 |
| 1996 | 65.8 | 59.0 |
| 1997 | 66.0 | 59.0 |
| 1998 | 68.0 | 61.0 |

| 2000 | 66.0 | 61.0 |
| 2001 | 66.0 | 60.0 |
| 2002 | 66.0 | 58.0 |
| 2003 | 66.0 | 57.0 |
| 2004 | 66.0 | 56.5 |

[^95]Figure 117

Percent of ACT Participants Taking Core High School Program 1991-2004

Average ACT composite scores for core and less than core groups for Iowa and the nation is shown in Table 113 and Figure 118. Iowa composite scores for the core group were 2.7 points higher than the less than core group in 2004. This is closest the gap between core and less than core test takers has been in Iowa for all years shown. Nationally, both the core group and less than core group had an increase of 0.1 in average composite score between 2003 and 2004.

Table 113

[^96]Figure 118

Source: American College Testing Program, The High School Profile Report for lowa.
Note: ACT classifies high school programs consisting of four years of English and three or more years each of mathematics, natural science, and social studies as "core" programs.

## ACT Composite Score Distributions

Table 114 provides the Iowa ACT composite score distributions for $1991,1995,2003$, and 2004. The pattern for each year displayed is very similar. The percent that scored 20 or above has increased from 67.1 in 1991, to 69.3 in 2003, to 69.5 in 2004. The percentage scoring 22 or above dropped slightly between 2003 and 2004 ( 51.9 percent versus 51.8 percent). Figure 119 shows the 2004 ditribution of Iowa ACT composite scores.

Table 114

## Iowa ACT Composite Score Distributions

 1991, 1995, 2003 AND 2004| Score | Year |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1991 |  | 1995 |  | 2003 |  | 2004 |  |
|  | Percent At | Percent at and Above | Percent At | Percent at and Above | Percent At | Percentat and Above | Percent At | Percent at and Above |

## ACT Scores by Enrollment Category

Table 115 provides Iowa public school average ACT scores by enrollment category for graduating classes of 2002 and 2003. Average ACT scores for the 2,500-7,499 category were the highest of all the enrollment categories for each area tested in both 2002 and 2003. The 250-399 enrollment category had the highest estimated percentage of graduates that took the ACT in both 2002 and 2003. On average, students in the enrollment categories of less than 2,500 students were at or below the state average in all ACT test areas for both 2002 and 2003. Average ACT scores for the less than 250 enrollment category were the lowest of all the enrollment categories for both years shown. However, the average scores increased in all subject areas for the <250 group in 2003.

Average ACT composite scores for Iowa core and less than core groups by enrollment category are provided in Table 116 and Figure 120. In general, both the core and less than core group in each enrollment category had no change from the previous year. However, the less than 250 enrollment category had a slight increase in the core group ( 20.9 in 2002 versus 21.0 in 2003) and substantial increase in the less than core group (19.0 in 2002 versus 19.4 in 2003).

Note: ACT classifies high school programs consisting of four years of English and three or more years each of mathematics, natural science, and social studies as "core" programs. State figures include all students tested, public as well as nonpublic.

Figure 120
Graduating Class of 2003 Average ACT Composite Scores for Iowa Public High School Students by Enrollment Category and Course of Study

[^98]
## ACT Scores by Gender

Males had higher average composite scores than females in Iowa and the nation for all years shown. Iowa females decreased the gap in 2004 by scoring 0.3 points below their male counterparts, down from 0.4 points in 2003. Nationally, the gap narrowed to 0.1 points between male and female average composite score. Both nationally and in Iowa, the trend in the gap hasn't significantly changed since 1999. Figure 121 compares average ACT composite scores by gender for Iowa and the nation.

Figure 121

## ACT Average Compostte Scores by Gender 1991-2004

Source: American College Testing Program, The High School Profile Report for lowa.

On average, females scored higher in English and reading and males scored higher in mathematics, science reasoning, and composite for both years shown. Females continued to outnumber males in the number of students that took the ACT in 2004. Table 117 provides Iowa average ACT scores by gender for English, mathematics, reading, science reasoning, and composite for 2003 and 2004.

Table 117

## ACT Composite Scores by Student Planned Educational Majors

The ACT average composite scores by planned educational majors and the number of students that plan on entering that educational major are shown in Table 118. ACT tested graduates self-report their planned college majors when they register to take the ACT Assessment. Both nationally and in Iowa, the health science and allied health fields major was selected most by the ACT test takers and business and management was selected second most.

Table 118

## Iowa Student ACT Scores Compared to Self-Reported High School Performance

Students self report their high school grade point average (GPA) and high school rank before they take the ACT tests. Iowa average composite ACT scores by the student's self reported GPA for 2004 is provided in Table 120. Just over 65 percent of the Iowa ACT test takers reported a GPA of 3.0 or above. The average composite score for students that indicated a GPA of 3.5 or better was 24.6, 2.6 points above the state average of 22.0 (see Table 107).

Table 120

## Iowa Average ACT Scores by Student’s Self-Reported High School Grade Point Average, 2004

Note: $\quad$ *2,560 students were not included since they did not report GPA.

Figure 122 provides student's self-reported class rank and resulting average ACT composite score from 1991 to 2004. The top, second, and third quartile trend lines are relatively stable for all years shown. The fourth quartile has increased from 17.1 in 2002 to 17.8 in 2004.

Figure 122

## Iowa ACT Average Composite Scores by Student's Self-Reported High School Rank, 1991-2004

[^102]
## Iowa Student Satisfaction with Selected Aspects of the Local High School

The 2004 Iowa ACT tested graduates' satisfaction with selected aspects of their high school program is shown in Table 121. The 2004 Iowa graduates rate their high schools on a scale of 1 to 4 (1satisfied, 2 - neutral, 3 - dissatisfied, 4 - no experience). Forty-eight percent of the students that took the ACT in 2004 reported that they were satisfied with classroom instruction and 46 percent were satisfied with the number of variety of course offerings.

Table 121

## Iowa ACT Test Takers' Degree of Satiseaction with Selected Aspects of High School Program, 2004

Note: The total number of lowa students tested in 2004 was 23,551.

## Scholastic Assessment Test (SAT)

The two primary components of the Scholastic Assessment Test (SAT) are the SAT I: Reasoning Test and the SAT II: Subject Tests. The SAT I: Reasoning Test includes SAT Verbal and SAT Mathematics and the SAT II: Subject Tests have over 20 tests in five general subject areas. The SAT is one of the national college entrance examinations developed by the College Board. Scores for the mathematics and verbal tests of SAT I range from a low of 200 to a high of 800 . The College Board reports national and state average scores for SAT I Verbal and Mathematics.

The first SAT was administered in June 1926 to 8,040 candidates. The number of candidates that took the SAT I: Reasoning Test in 2004 totaled over 1.4 million which was approximately 48 percent of the 2004 high school graduates. Nationwide, approximately 37 percent of the SAT tested graduates were minority, up 1 percentage point from 2003.

The number of Iowa high school graduates that took the SAT I in 2004 totaled 1,832 which accounted for approximately 5 percent of the 2004 Iowa graduates. In 2004, 49.7 percent of the Iowa SAT I test takers were female and 13.7 percent self reported that they were minority students.

Information displaying average SAT Verbal and Mathematics scores for test takers in Iowa and the nation is provided in Table 122 and Figure 123. Iowa improved in both the SAT Verbal and the SAT Math between 2003 and 2004. SAT Verbal increased from 586 in 2003 to 593 in 2004 while SAT Math increased from 597 in 2003 to 602 in 2004. Nationally, the average SAT Verbal score increased from 507 in 2003 to 508 in 2004 while the average SAT Math score decreased from 519 in 2003 to 518 in 2004. Iowa's average scores remain above the national average scores and the differential increased in 2004 for both tests.

Table 122

## Trends of Average SAT Scores for Iowa and the Nation, 1991-2004

|  | SAT Verbal |  | SAT Math |  |
| :--- | :---: | :---: | :---: | :---: |
| Graduating Class | Iowa | Nation | Iowa | Nation |
| 1991 | 588 | 499 | 591 | 500 |
| 1992 | 585 | 500 | 596 | 501 |
| 1993 | 593 | 500 | 595 | 503 |
| 1994 | 580 | 499 | 586 | 504 |
| 1995 | 589 | 504 | 595 | 506 |
| 1996 | 590 | 505 | 600 | 508 |
| 1997 | 589 | 505 | 601 | 511 |
| 1998 | 593 | 505 | 601 | 512 |
| 1999 | 594 | 505 | 598 | 511 |
| 2000 | 589 | 505 | 600 | 514 |
| 2001 | 593 | 506 | 603 | 514 |
| 2002 | 591 | 504 | 602 | 516 |
| 2003 | 586 | 508 | 597 | 519 |
| 2004 | 593 |  |  | 518 |

## Trends of Average SAT Scores for Iowa and the Nation, 1991-2004

Source: The College Board, 2004 Profile of SAT Program Test Takers.
Note: The lowa participation rate in SAT for the class of 2004 was 5 percent. Historically, lowa scores are based on 3 to 5 percent of the graduating class.

Iowa ranked $1^{\text {st }}$ in average SAT Math score and $2^{\text {nd }}$ in average SAT Verbal score nationally. However, it should be noted that comparisons made between Iowa and other states with a high percentage of SAT tested graduates is not recommended. Among the midwest states, Illinois and Minnesota had the highest percentage of graduates that took the SAT in 2004 at 10 percent while Iowa, North Dakota, and South Dakota had the lowest percentage at 5 percent. Table 123 provides average SAT scores for Iowa, the nation, and the midwest states.

Table 123

Iowa male average SAT Math and Verbal scores remained above the average female scores, continuing the overall trend for all years shown. The gap increased slightly in both areas in 2004. Data detailing the trends are presented in Figures 124 and 125.

## Advanced Placement (AP)

The Advanced Placement (AP) Program, sponsored by the College Board, provides secondary school students the opportunity to take college-level courses in a high school setting. The AP program currently offers more than 30 courses in 19 subject areas. AP courses are taught by highly qualified high school teachers who use the AP Course Descriptions to guide them and AP examinations are offered once a year in May by the College Board.

Advanced Placement examination grades are reported on a five-point scale: 1-No recommendation for college credit; 2-Possibly qualified; 3-Qualified; 4-Well qualified; and 5-Extremely well qualified.

More than 1.85 million AP examinations were taken in the United States in 2004, while 8,192 AP exams were taken by Iowa high school students. The number of Iowa AP candidates has increased 268 percent from 1,475 students in 1991 to 5,425 students in 2004, while the number of Iowa examinations has increased nearly 305 percent from 2,023 exams to 8,192 exams over the same period. Although both the percentage of the number of candidates and the percentage of the number of exams increased in 2004, the increase was less than previous years. Table 124 provides information on the number of AP candidates and the number of AP exams.

Figure 126
Advanced Placement Exam Score Distributions for Iowa and the Nation - 2004

[^107]Table 130 provides the AP school participation rates by state from 1992 to 2003. Nearly 60 percent of U.S. high schools participated in the AP program in 2003, a 30 percent increase from the 1992 figure. There are slightly more than 45 percent of Iowa high schools in AP programs in 2003, a 106 percent increase from the 1992 figure. Iowa's AP school participation rate ranked $38^{\text {th }}$ among the 50 states and the District of Columbia in 2003.

The number of AP examinations taken per thousand of $11^{\text {th }}$ and $12^{\text {th }}$ graders is provided in Table 131. Iowa ranked $46^{\text {th }}$ in the nation in 2003 with 85 AP examinations taken per thousand of $11^{\text {th }}$ and $12^{\text {th }}$ graders, up from the 72 per thousand and a national ranking of $47^{\text {th }}$ in 2002. Nationally, 225 AP exams per thousand of $11^{\text {th }}$ and $12^{\text {th }}$ graders were taken in 2003.

## National Assessment of Educational Progress (NAEP)

The National Assessment of Educational Progress (NAEP), conducted by the U.S. Department of Education, has been the only nationwide assessment of student achievement in various subject areas since 1969.

The NAEP tests assessed three contexts for reading: literary experience, reading for information, and reading to perform a task. Students were assessed on four different aspects of reading: forming a general understanding, developing interpretation, making reader and text connections, and examining content and structure. In 2003, the NAEP Reading assessed approximately 342,000 students in grades 4 and 8 , the largest group ever tested in NAEP Reading, throughout the nation. The national data and state-by-state results for the NEAP Reading are available for both grades. All 50 states and three jurisdictions participated in the 2003 reading assessment at grades 4 and 8 and met student and school participation criteria for reporting results.

The NAEP Mathematics tests reflected the three types of mathematical abilities as follows: conceptual understanding, procedural knowledge, and problem solving in five content areas: number sense, properties, and operations; measurement; geometry and spatial sense; data analysis, statistics, and probability; and algebra and functions. In 2003, the NAEP Mathematics assessed approximately 343,000 students in grades 4 and 8 nationwide. This is the largest group tested in NAEP Mathematics. The national data and state-by-state results for the NEAP Mathematics are available for both grades. Iowa along with 49 other states and 3 jurisdictions at grade 4 and grade 8 participated in the 2003 mathematics assessment and met student and school participation criteria for reporting results.

## Average Scale Scores

The NAEP Assessment scores are reported in a scale range of 0 to 500 . Table 132 presents the mathematics and reading results for the public school students in grades 4 and 8 in Iowa and the nation. In all years shown, the average scale scores for Iowa students were higher than the national averages in both mathematics and reading at grades 4 and 8 . NAEP began testing the use of accommodations in reading in 1998 and in mathematics in 2000. The use of accommodations allows for the assessment of special needs students (such as students with disabilities or English language learners) in a small group setting or allowing them extra time and more breaks, to result in higher levels of inclusion. In the last few years, a range of 15 to 20 percent of $4^{\text {th }}$ grade and $8^{\text {th }}$ grade students nationwide selected for NAEP were identified as special needs students. This is about double the size of the special needs population in 1992. Therefore, comparisons between the accommodations not permitted and accommodations permitted, results should be interpreted with caution. Table 132 shows the results for the accommodations not permitted in the earlier years and the accommodations permitted in the most recent years. The average scores for both the accommodations not permitted and accommodations permitted are reported for reading in 1998 and for mathematics in 2000.

Table 132

| Average NAEP Reading and Mathematics Scale Scores |  |  |  |  |  |  |  |  |  |

Source:U.S. Department of Education, National Center for Education Statistics, The Nation's Report Cards: Reading 2003 and Mathematics 2003.
Note: NAEP began to provide accommodations to special needs students in reading in 1998 and in mathematics in 2000.

## NAEP Achievement Level

Student performance results are reported according to three achievement levels (Basic, Proficient, and Advanced - as well as the Below Basic Category) established by the National Assessment Governing Board (NAGB). These levels are intended to describe what students should know and be able to do at each achievement level. Basic represents partial mastery of prerequisite knowledge and skills that are fundamental for proficient work at each grade. Proficient represents solid academic performance, and Advanced represents superior performance.

The distributions of student performance in four categories by achievement levels, Below Basic, Basic, Proficient, and Advanced, are shown in Figures 127-130. The data shows Iowa fourth and eighth graders at or above Proficient level were higher than national averages (Figures 127 to 130) in reading and mathematics in 2003. The grades 4 and 8 students from other two midwest states, Minnesota and Wisconsin, also performed above the nation in reading and mathematics in 2003. Kansas, South Dakota, and North Dakota had three of the four groups of students tested above the nation. Illinois had only one of four groups tested above the nation and the rest of three groups were not significantly different from the nation. All midwest states were either at or above the national average for the percentage of students at or above the proficient level in mathematics and reading for all grades shown.

## Pursuit of Postsecondary Education/Training

This section reports the trend of Iowa public high school graduates pursuing and intending to pursue postsecondary education or training. Before 1996, graduate follow-up data was collected through the Basic Educational Data Survey (BEDS) from all the districts that operated high schools. From 1997 to 1999 , a combination of graduate follow-up and graduate intentions was collected due to the transition of district summary data reported from the individual student record system through Project EASIER (Electronic Access System for Iowa Education Records). Since 2000, graduate intentions data has been collected from all districts with high school programs. In the transition years, as more Iowa districts join the Project EASIER, these districts collected graduate intentions from their senior class while the nonEASIER districts reported graduate follow-up data.

Figure 131 shows the percent of graduates pursuing or planning to pursue postsecondary education or training for public high school graduating classes. The 1985 figure is also shown in Figure 131 as a baseline. The percent of Iowa public high school graduates that intended to pursue postsecondary education/training was 83.5 percent in 2004, a slight increase from the 2003 figure.

Figure 131

## Percent of Iowa Public High School Graduates/Seniors Pursuing or Intending to Pursue Postsecondary Education/raining Graduating Classes of 1985 and 1992-2004

[^112]Table 133 displays a percentage matrix that shows trends for the seven enrollment categories. The two smallest enrollment categories had the highest percentage of graduates that intended to pursue postsecondary education for the third consecutive year.

Table 133

## Percent of Iowa Public High School Graduates/Seniors

 Pursuing or Intending to Pursue Postsecondary EducationTraining Graduating Classes of 1985 and 1995 through 2004|  | Enrollment Category |  |  |  |  |  |  |  |

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Graduate Follow-up/Intentions Files.
Note: Due to the transition from collecting data on a graduate follow-up basis to collecting intentions for graduates, data for the graduating classes of 1997, 1998, and 1999 represent calculated estimates.

A gender comparison is shown in Table 134 for graduating classes of 1998 to 2004. The percentage of females that intended to pursue postsecondary education or training was nearly 9 percentage points or higher than males for most of the years shown.

| Source: | Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Graduate Follow-up/Intentions Files. <br> Due to the transition from collecting data on a graduate follow-up basis to collecting intentions for graduates, data for the graduating classes of 1998 and 1999 represent calculated estimates. |  |  |  |
| Note: |  |  |  |  |

The postsecondary institutions include four- or two-year public and private colleges in or out of Iowa. Table 135 displays the trend by institution type. In 2004, the percent of Iowa graduates that planned to attend a community college has more than doubled compared to the 1985 figure while the percentage change has been relatively small for the intention to attend a four-year public college during the same period.

Table 135

Note: Due to the transition from collecting data on a graduate follow-up basis to collecting intentions for graduates, data for the graduating classes of 1997, 1998, and 1999 represent calculated estimates.

Table 136 and Figure 132 compare the trends for the four-year and two-year institutions. In 1985, the proportion of the high school graduates that went to four-year institutions was 16 percentage points higher than those who went to two-year colleges; however, the gap is closing. The proportion of the graduates that intended to attend a four-year college is only 1.1 percentage points higher than the proportion of the graduates for the two-year colleges in 2004 ( 40.1 percent versus 39.0 percent).

## Postsecondary Enrollment Options

The Postsecondary Enrollment Options Act (PSEO) became law in 1993 (See Iowa Code, Chapter 261C). The PSEO provides the opportunity for Iowa high school junior and senior students and grades 9 and 10 gifted and talented students to earn college credit in high school. According to the law, participating districts are required to pay a fee to postsecondary institutions that provide the college credit courses. The fee is the amount equal to the lesser of "actual and customary cost of tuition, textbooks, materials, and fees directly related to the course taken," or the sum of $\$ 250$.

Table 137 and Figure 133 provide the trends for Iowa PSEO enrollments and courses taken. In 20032004, the PSEO enrollments decreased for the second consecutive year. The number of courses taken increased in 2003-2004 after a decrease in the previous school year.

Figure 133

[^114]Table 138 shows the PSEO enrollments breakdown by grade and Table 139 shows the number of courses taken by course area and postsecondary institution type. The enrollments decreased for all grades listed (see Table 138) in both 2002-2003 and 2003-2004. In 2003-2004, the number of courses taken increased in vocational/technical areas for all college type listed. The only increase in academic courses taken is in community colleges. Community colleges had the highest participation in both academic and vocational/technical areas (see Table 139).

## Dropouts

Grades 7-12 dropout data are collected through the Basic Educational Data Survey (BEDS) for all public school districts. The grade level dropout information makes it possible to look at a single given grade dropout rate or calculate high school (grades 9-12) and grades 7-12 dropout rates. The numerator of the grades 7-12 dropout rate (or grades 9-12 dropout rate) is the total number of dropouts for grades 7-12 (or the total number of dropouts for grades 9-12) and the denominator is the total enrollments of grades 7-12 (or total enrollments of grades 9-12). Dropout data are also available by gender and race/ ethnicity.

The National Center for Education Statistics (NCES) definition used for dropouts is students who satisfy one or more of the following conditions:

- Was enrolled in school at some time during the previous school year and was not enrolled by October 1 of the current year or
- Was not enrolled by October 1 of the previous school year although was expected to be enrolled sometime during the previous school year and
- Has not graduated from high school or completed a state or district-approved educational program; and
- Does not meet any of the following exclusionary conditions: a) transfer to another public school district, private school, or state or district-approved educational program, b) temporary schoolrecognized absence for suspension or illness, and c) death.

A student who has left the regular program to attend an adult program designed to earn a General Educational Development (GED) or an adult high school diploma administered by a community college is considered a dropout. However, a student who enrolls in an alternative school administered by a public school district is NOT considered a dropout.

Figure 135 displays the trend of Iowa public school grades 7-12 and grades 9-12 dropout rates. In general, there was a downward trend in grades 7-12 dropout rates since 1990-1991, except the school years of 1994-1995, 1999-2000 and 2000-2001. A similar pattern can be seen for grades 9-12 dropout rates. In 2001-2002 and 2002-2003, the dropout rates decreased significantly for both grades 7-12 average and high school average. In 2002-2003, the dropout rate for grades $9-12$ was 1.98 percent and the dropout rate for grades $7-12$ was 1.34 percent.

Figure 135

> Iowa Public School Grades 7-12 and
> Grades 9-12 Dropout Rates 1985-1986 and 1990-1991 through 2002-2003

| Source: $\begin{array}{l}\text { lowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational } \\ \text { Data Survey, Dropout Files. }\end{array}$ |
| :--- | :--- |

The 2002-2003 dropout statistics by grade at the state level for Iowa public school students are shown in Table 140. In 2002-2003, a total of 3,036 students were reported as dropouts. The largest percentage of dropouts was from grade 11 with 33.3 percent, followed by grade 12 with 32.5 percent of total dropouts. Only 9 students dropped out from grade 7 and 13 students dropped out from grade 8 statewide in 2002-2003.

Table 140 also shows the grades 7-12 dropout distribution and grades 7-12 enrollment distribution by enrollment category. Districts with enrollments of 2,500 and above accounted for about 68 percent of all dropouts and 45 percent of grade 7-12 enrollments. For the districts with fewer than 2,500 students, the average grades 7-12 dropout rate was less than 1 percent. However, the average grades 7-12 dropout rate was above 2 percent for the districts with 7,500 students or more.

Table 140

## Total Iowa Public School Grade 7-12 Dropouts by Enrollment Category 2002-2003

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Dropout and Enrollment Files.

Table 141 shows gender comparisons on dropouts and enrollments for school years 1995-1996 to 2002-2003. Males had a higher dropout percent than females in all years shown. In 2002-2003, males represented nearly 59 percent of total dropouts and about 51 percent of total enrollments in grades 7-12.

Table 141

## Total Iowa Public School Grade 7-12 Dropouts by Gender 1995-1996 то 2002-2003

[^116] DataSurvey, DropoutFiles.

Table 142 shows dropout data and grade 7-12 enrollment by race/ethnicity in 2002-2003. The data reflect that dropout rates were higher for all minority groups than for the non-minority. In 2002-2003, all minorities represented less than 10 percent of grades 7-12 enrollments, while representing about 21 percent of total dropouts. The dropout rate for minorities was 3.03 percent compared to 1.17 percent for non-minority. All minority groups except Asian had grades 7-12 dropout rates above 3 percent. Asian had 1.3 percent, below the state average dropout rate.

Table 142

Source: lowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational DataSurvey, Dropout File.

Grades 7-12 dropout and enrollment distributions by race/ethnicity are shown in Table 143. In general, the grades 7-12 non-minority enrollment and non-minority dropouts have been decreasing from 19951996 to 2002-2003 (also see Figure 136) while the Hispanic dropout rates and enrollment proportions have more than doubled during the same time period (Table 143).

Figure 136

> Comparison of the Percentage of Grade 7-12 Enrollments and Grede 7-12 Dropouts Represented by Minority and Non-Minority Iowa Public School Students 1995-1996 and 2002-2003

[^117]A frequency distribution of the 2002-2003 grades 7-12 dropout rates is shown in Table 144. Almost 30 percent of the Iowa public school districts reported no dropouts, slightly over 71 percent of the districts had a dropout rate no more than 1 percent, and 90 percent of the districts had a dropout rate of 2 percent or less. A total of 9 Iowa districts ( 2.4 percent) had over a 3 percent dropout rate in 20022003.

Table 144

## Distribution of Grade 7-12 Dropout Rates for Iowa Public School Districts 2002-2003

A cross state comparison for grades 9-12 dropout rate is shown in Table 145. The public high school dropout rates by state for 1994-1995 to 2000-2001 were published by the National Center for Education Statistics (NCES) based on the Common Core of Data (CCD). In a range of 2.2 and 10.9 dropout rates, Iowa ranked third in the nation with a rate of 2.7 percent in 2000-2001.

## High School Graduation Rates

The Department of Education collects high school graduation data from all Iowa public high schools in the spring through the Basic Educational Data Survey (BEDS). Three groups of the high school completers are collected based on the National Center for Education Statistics (NCES) definitions:

- Regular diplomas are given to most students for completing all unmodified graduation requirements for the districts in the regular high school program.
- Other diplomas are given to students who have received this diploma from an alternative placement within the district, or who have had the requirements modified in accordance with a disability.
- Other Completersare the students who have finished the high school program, but did not earn a diploma. These students may earn a certificate of attendance or other credential in lieu of a diploma.

Since 2003, public high school graduation rate has been one of the indicators for the No Child Left Behind (NCLB) Accountability System. The NCLB Act defines the regular diploma recipients as high school graduates. Therefore the Iowa Accountability Plans under the Consolidated Application Process has a narrower definition for high school graduates:

- Students receiving regular diplomas. Regular diplomas are given to students for completing all unmodified district graduation requirements in the standard number of four years.
- Students receiving regular diplomas from an alternative placement within the district, or who have had the requirements modified in accordance with a disability.

The other completers are not high school graduates based on the Iowa Consolidated State Application Accountability Workbook.

The Annual Condition of Education Report (COE) has applied the NCLB definition for the data analyses and excluded other completers from the Iowa graduates since 2003. There are less than 100 other completers each year in Iowa and many of the other completers are foreign exchange students. Under the current graduation rate model other completers are neither counted as graduates nor counted as dropouts for the NCLB Act purpose.

The high school graduation rate is calculated by dividing the number of high school regular diploma recipients in a given year by the estimated number of 9 th graders four years previous. The estimated $9^{\text {th }}$ grade enrollment is the sum of the number of high school regular diploma recipients in that year and dropouts over the four series year period. More specifically, the total dropouts include the number of dropouts in grade 9 in year 1, the number of dropouts in grade 10 in year two, the number of dropouts in grade 11 in year three, and the number of dropouts in grade 12 in year four.

$$
G R_{i}=\frac{G_{i}}{G_{i}+D_{i}+D_{(i-1)}+D_{(i-2)}+D_{(i-3)}}
$$

Where: $G R_{i}$ is the graduation rate for a given year (i).
$\mathrm{G}_{i}$ is the number of students achieving a regular high school diploma for year $i$.
$D_{i}$ is the number of dropouts in grade 12 for year $i$.
$D_{(i-1)}$ is the number of dropouts in grade 11 for the first previous year (i-1).
$D_{(i-2)}^{(i-1)}$ is the number of dropouts in grade 10 for the second previous year (i-2).
$D_{(i-3)}^{(i-2)}$ is the number of dropouts in grade 9 for the third previous year (i-3).

The high school graduation data by gender and state total for graduating classes 1996 through 2003 are shown in Table 146. The graduation rates increased annually for all three groups shown. The largest annual increases were in 2002-2003 for the two gender groups, as well as for the overall class. Females had higher graduation rates than the males for all eight classes shown (also see Figure 137).

Table 146

## Iowa Public High School Four-Year Graduation Rates by Gender, Graduating Classes 1996-2003

| GraduatingClass | Number of Graduates |  |  | Graduation Rate |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Females | Males | Total | Females | Males | Total |
| 1996 | 15,874 | 15,969 | 31,843 | 88.8\% | 85.2\% | 87.0\% |

Source: lowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, High School Completers and Dropout Files.

Eight years of racial/ethnic graduation statistics are reported in Table 147. Asian and White had the highest graduation rates for all classes shown. The other three minority groups, American Indian, Hispanic, and African American had high school graduation rates below the state average. The rates for White have been increasing steadily, from 88.2 percent in 1996 to 91.3 percent in 2003. Although the minority data are less stable due to small group sizes, gradual upward trends can be seen for most of the racial/ethnic groups in general.

Table 147

## Iowa Public High School Four Year Graduation Rates by Race/Ethnicity, Graduating Classes 1996 to 2003

| Graduating Class | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 |

Table 148 displays the graduation rates by enrollment category for graduating classes 1996 to 2003. Districts with enrollments of 2,500 and above had graduation rates below the state average while the smaller districts had average graduation rates above the state average. For all seven enrollment categories shown, the 2003 graduating class had the highest average graduation rates compared to the earlier classes except the enrollment categories of 250 to 399 and 400 to 599 .

Table 149 shows the graduation rates by state based on the NCES graduation definition (high school graduates include regular and other diplomas as well as other completers). Iowa has had the $3{ }^{\text {rd }}$ highest graduation rates in the nation each year since 1996-1997. Only North Dakota and Wisconsin ranked above Iowa.

## Schools and Districts in Need of Assistance

Under the No Child Left Behind Act (NCLB), public school districts and public schools must report the academic progress of all students in grades 4,8 , and 11 and students by subgroups and their test participation rates for the same three grades in the subject areas of reading and mathematics. Public elementary and middle school average daily attendance (ADA) rates and public high school graduation rates are the additional indicators for public school districts.

If a school does not meet the annual Adequate Yearly Progress (AYP) state participation goals or state Annual Measurable Objectives (AMO) in reading or mathematics assessment in any one of the grades 4,8 , and 11 in either the "all students" group or any one of the subgroups for two consecutive years, it is designated as a school in need of assistance.

If a district does not meet the annual Adequate Yearly Progress (AYP) state participation goals or state AMO in either the "all students" group or any one of the subgroups at all the required grade levels (4, 8 , and 11) in the same subject area (either reading or mathematics) for two consecutive years, it shall be identified as a district in need of assistance. If a district does not meet the goals for district level K8 average daily attendance rate or high school graduation rate for two consecutive years, it also shall be identified as a district in need of assistance.

Sixty-six of 1,491 (4.4 percent) public schools were identified as a school in need of assistance and 9 of 370 ( 2.4 percent) public school districts were identified as a district in need of assistance following the 2003-2004 school year. Table 150 shows the list of the schools in need of assistance and Table 151 shows the list of the districts in need of assistance.

## Highly Qualified Teacher Comparison

Table 152 shows the professional qualification, in terms of the distribution of teacher education background, of all public school teachers in Iowa. In 2003-2004, about 27 percent of Iowa public school full-time teachers held an advanced degree while almost 21 percent of the part-time teachers had a degree beyond bachelors.

Table 152

# Teacher Characteristic Comparison Between Top Quartile Poverty Schools and Botiom Quartile Poverty Schools 2003-2004 

|  |  | Baccalaureate <br> Degree Level | Master's <br> Degree Level | Specialist <br> Degree Level | Doctorate <br> Degree Level | Total |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: |

Table 153 provides a comparison between full-time teachers in school buildings in the top quartile (school buildings with a high percentage of students eligible for free or reduced price lunch) and fulltime teachers in buildings in the bottom quartile (school buildings with a low percentage of students eligible for free or reduced price lunch) for the 2003-2004 school year. Iowa requires that all teachers hold a valid Iowa teaching license and are properly endorsed to teach in the areas for which they are assigned. All Iowa teachers are considered highly qualified under the requirements of the No Child Left Behind (NCLB) Act. The NCLB Act also requires that a state include in its annual state report the characteristics of teachers in high and low poverty schools. High and low poverty schools are defined in NCLB as the top and bottom quartiles of schools in poverty. Schools in the top quartile had significantly fewer students than schools in the bottom quartile. Teachers in the two quartiles did not have significant differences in the percentage with advanced degrees, average experience, average age, or average salary.

Source: Iowa Department of Education, Bureau of Planning, Research, and Evaluation, Basic Educational Data Survey, Free and Reduced Meal Eligibility and Staff Files.

The No Child Left Behind (NCLB) Act requires that the number of teachers with emergency/provisional licenses be reported by the state. Emergency/Provisional license type is granted to teachers that have not completed a teacher education program. All licensed Iowa teachers have completed a teacher education program and there are no Iowa teachers with emergency/provisional licenses.

Estimated 2003-2004 assignments by academic area for grades 7-12 are presented in Table 154. Estimates are based on the number of teachers with teaching assignments in their endorsement area compared to the number of teachers with teaching assignments outside their endorsement area. This estimate provides a snapshot of the percentage of classes in specific academic areas that are taught by a highly qualified teacher. For all areas shown, approximately 95 percent of the courses in the academic areas listed were taught by a highly qualified teacher. Of the eleven academic areas shown, seven are nearly 90 percent or greater. Economics and Geography have the lowest percentage at 66 percent and 49 percent respectively.

## Finance

The Finance chapter provides budget information pertaining to revenues, property taxes, state aid, and income surtax. The most current data available at the time of preparation of The Annual Condition of Education Report is displayed. Sources for the information include the 2002-2003 Certified Annual Financial Report, the 2004-2005 Department of Management Aid and Levy Worksheet database, and Program and Budget Summary information from the Fiscal Services, Legislative Services Agency.

Expenditure information is included and is detailed by functions and objects. Information is displayed at the state level and in some cases at the enrollment size category level. The 1985-1986 school year is used as the basis of comparison wherever possible.

## Function Category Expenditures

Function category expenditures as a percentage of total general fund expenditures are displayed in Table 155. Function categories are grouped into instruction, student support services, staff support services, administrative services, operations and maintenance, student transportation, central support services, food services subsidy, and community service and education.

The percentage of expenditures by function category has remained relatively stable the past four years. In 2002-2003, four of the nine function categories remained at the same percentage level of total general fund expenditures. Two function categories (Instruction and Operations and Maintenance) increased slightly while three (Staff Support Services, Administrative Services, and Food Services Subsidy) decreased slightly as a percentage of total general fund expenditures.

Since the 1985-1986 school year, instruction has increased from 65.3 percent to 70.1 percent of the total expenditures. Operations and maintenance and student transportation have decreased significantly since 1985-1986.

Table 155

## Function Category Expenditures as a Percent of Total General Fund Expenditures in Iowa Public Schools 1985-1986 and 1999-2000 то 2002-2003

|  | Year |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Function Category | $1985-1986$ | $1999-2000$ | $2000-2001$ | $2001-2002$ | $2002-2003$ |
| Instruction | $65.3 \%$ | $69.2 \%$ | $69.0 \%$ | $70.0 \%$ | $70.1 \%$ |
| Student Support Services | 2.9 | 3.8 | 3.8 | 3.8 | 3.8 |
| Staff Support Services | 3.2 | 3.9 | 4.0 | 3.7 | 3.4 |
| Administrative Services | 10.2 | 9.6 | 9.5 | 9.7 | 9.6 |
| Operations and Maintenance | 12.2 | 8.7 | 9.2 | 8.4 | 8.7 |
| Student Transportation | 5.2 | 3.9 | 3.8 | 3.6 | 3.6 |
| Central Support Services | 0.6 | 0.6 | 0.4 | 0.5 | 0.5 |
| Food Services Subsidy | 0.2 | 0.1 | 0.1 | 0.1 | 0.0 |
| Community Service and Education | 0.2 | 0.2 | 0.2 | 0.2 | 0.2 |
|  |  |  |  |  |  |

[^121]Function category expenditures as a percent of total general fund expenditures by enrollment category are provided in Table 156. On average, instruction as a percent of total general fund expenditures was below the state average in districts with enrollments between 250 and 999 . Enrollment categories of less than 250, 2,500-7,499 and over 7,500 were all above the state average on the percent spent on instruction. In general, for the percent of general fund expenditures spent on student support services, staff support services, and operations and maintenance, as the enrollment category went up, so did the percentage of general fund expenditures.

Table 156

## Object Category Expenditures

Table 157 details object category expenditures as a percent of total general fund expenditures for the years 1985-1986 and 1999-2000 through 2002-2003. Expenditures on salaries, benefits, purchased services, supplies, property, and other objects account for object category expenditures. The percentage spent on salaries decreased by 0.8 percentage points and the percentage spent on benefits increased 0.7 percentage points between 2001-2002 and 2002-2003. Since 1985-1986, the percentage spent on salaries has decreased from 68.1 percent to 64.2 percent, a decrease of 5.7 percent. In the same time period, the percentage spent on benefits has increased from 12.9 percent to 17.5 percent, an increase of 35.7 percent.

Table 157

# Object Category Expenditures as a Percent of Total General Fund Expenditures in Iowa Public Schools 1985-1986 and 1999-2000 то 2002-2003 

|  | Year |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $\quad$ Object Category | $1985-1986$ | $1999-2000$ | $2000-2001$ | $2001-2002$ | 2002-2003 |
| Salaries | $68.1 \%$ | $64.6 \%$ | $64.0 \%$ | $65.0 \%$ | $64.2 \%$ |
| Benefits | 12.9 | 15.8 | 16.1 | 16.8 | 1.5 |
| Purchased Services | 9.9 | 10.3 | 10.3 | 10.2 | 10.3 |
| Supplies | 5.7 | 6.3 | 6.8 | 5.8 | 6.0 |
| Property | 2.6 | 2.6 | 2.5 | 1.8 | 1.6 |
| Other Objects | 0.8 | 0.4 | 0.3 | 0.4 | 0.4 |

Source: Iowa Department of Education, Division of Financial and Information Services, Certified Annual Financial Reports.
Note: Property includes expenditures for the initial, additional, and replacement items of equipment,

Table 158 displays the percentage of object category expenditures by enrollment category. Purchased services continued to remain a substantial portion of expenditures for districts with less than 250 students. On average, the smallest districts spent 25.8 percent of the general fund expenditures on purchased services, while the other enrollment categories spent a significantly less percentage. These expenditures may result from costs of purchasing instructional and administrative services associated with whole grade sharing. The <250 enrollment category also spent significantly less on salaries as a percentage of total general fund expenditures compared to the other enrollment categories. The smallest districts average 52.4 percent while all other enrollment categories spent over 60.0 percent on salaries. Expenditure percentages on benefits increased with enrollment size, starting with 13.9 percent in the less than 250 enrollment category and moving up to 19.2 percent in the $7,500+$ enrollment category.

Table 158

## Object Category Expenditures as a Percent of Total General Fund Expenditures in Iowa Public Schools by Enrollment Category 2002-2003

|  | Enrollment Category |  |  |  |  |  |  |  |

Note: Totals may not equal 100 percent due to rounding.

## Revenues

Revenues by source as a percent of total general fund revenues are presented in Table 159. Iowa public school general fund revenue sources include local taxes (property and income surtax), interagency, other local sources, intermediate sources, state foundation aid, other state sources, federal sources and other financing sources. Other state sources for 2002-2003 include allocations for educational excellence, school improvement, class size reduction block grants, and student achievement/teacher quality program funding.

Total state revenue sources (state foundation aid and other state sources) accounted for 55.1 percent of the general fund revenue in public schools, down from last year's percentage of 56.3 percent. State foundation aid declined 0.4 percentage points while other state sources declined 0.8 percentage points from 2001-2002. Since 1999-2000, state foundation aid as a percentage of general fund revenues has decreased from 52.9 percent to 50.2 percent while the percentage of local property taxes has increased from 31.6 percent to 33.8 percent. The percentage of revenue from federal sources has also increased, from 3.3 percent in 1999-2000 to 4.4 percent in 2002-2003.

Compared to 1985-1986, local taxes have decreased substantially, moving from 47.3 percent of general fund revenues to 33.8 percent in 2002-2003. The percentage of revenue from state revenue sources has increased 8.4 percentage points since 1985-1986. Federal revenue sources as a percentage of total general fund revenues have also increased substantially since 1985-1986, increasing from 2.4 percent to 4.4 percent in 2002-2003.

Table 159

## Revenues by Source as a Percent of Total General Fund Revenues in Iowa Public Schools 1985-1986 AND 1999-2000 то 2002-2003

|  |  | Year |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Source of Revenue | $1985-1986$ | $1999-2000$ | $2000-2001$ | 2001-2002 | 2002-2003 |
| Local Taxes | $47.3 \%$ | $31.6 \%$ | $32.0 \%$ | $32.8 \%$ | $33.8 \%$ |
| Interagency | 1.4 | 3.9 | 3.9 | 4.2 | 4.3 |
| Other Local Sources | 1.8 | 2.6 | 2.6 | 2.2 | 2.0 |
| Intermediate Sources | 0.1 | 0.2 | 0.3 | 0.3 | 0.3 |
| State Foundation Aid | 46.0 | 52.9 | 52.3 | 50.6 | 50.2 |
| Other State Sources | 0.7 | 5.3 | 5.3 | 5.7 | 4.9 |
| Federal Sources | 2.4 | 3.3 | 3.4 | 3.9 | 4.4 |
| Other Financing Sources | 0.3 | 0.2 | 0.1 | 0.2 | 0.1 |

Source: Iowa Department of Education, Division of Financial and Information Services, Certified Annual Financial Reports.
Notes: Interagency includes revenues from services provided to other LEAs such as tuition, transportation services, and other purchased services. Intermediate sources include grants-in-aid revenues in lieu of taxes received from AEAs, cities and counties.
Other local sources include interest, textbook sales, rents and fines, student fees, and community service fees.
Other financing sources include the proceeds from long-term debt such as loans, capital leases and insurance settlements for loss of fixed assets.
Totals may not equal 100 percent due to rounding.

State foundation aid, other state aid, and local taxes continue to be the three largest sources of general fund revenue. In 1985-1986, local property taxes were a higher percentage of a general fund revenue source than revenue from state sources. However, total state aid has remained well above local property taxes for the rest of the years shown. From 1999-2000 to 2002-2003, that gap has narrowed from 26.6 percentage points to 21.3 percentage points. Figure 138 displays changes in these revenue sources for past years.

Figure 138

## Percent of Total General Fund Revenues from Local Taxes, State Foundation Aid, and Total State Aid in Iowa Public Schools 1985-1986 and 1994-1995 то 2002-2003

[^122]Table 160 provides information on revenues by source as a percent of total general fund revenues in Iowa public school districts by enrollment category for 2002-2003. Enrollment categories with less than 1,000 students had a higher percentage of general fund revenue from local property taxes than the enrollment categories with over 1,000 students. The inverse is true regarding state foundation aid. Enrollment categories under 1,000 were all below 50.0 percent of state aid as a revenue source while the enrollment categories of over 1,000 students were all above 51.0 percent.

Table 160

Revenues by Source as a Percent of Total General Fund Revenues in Iowa Public Schools 2002-2003

|  | Enrollment Category |  |  |  |  |  |  |  |

Notes: Interagency includes revenues from services provided to other LEAs such as tuition, transportation services, and other purchased services.
Intermediate sources include grants-in-aid revenues in lieu of taxes received from AEAs, cities and counties. Other local sources include interest, textbook sales, rents and fines, student fees, and community service fees.
Other financing sources include the proceeds from long-term debt such as loans and capital leases and insurance settlements for loss of fixed assets. Totals may not equal 100 percent due to rounding.

Figure 139 compares the percent of total general fund revenues from local property taxes and total state aid by enrollment category for 2002-2003. In general, the gap widens as the enrollment category increases. This is a similar trend that has been displayed in previous years. The less than 250 enrollment category was the only enrollment category that had a higher percentage of property tax than total state aid as a source of general fund revenue. The largest difference between total state aid and local property taxes was 24.5 percentage points at the 1,000-2,499 and the 7,500+ enrollment categories.

Figure 139

## Percent of Total General Fund Revenues from Local Taxes and Total State Aid in Iowa Public Schools by Enrollment Category 2002-2003

Source: Iowa Department of Education, Division of Financial and Information Services, Certified Annual Financial Reports.

## Taxable Valuation

Taxable valuation represents the adjusted-equalized value of real property. The state has 112 assessing jurisdictions and the property in each of these jurisdictions is equalized by the state through the Department of Revenue every two years. Assessments are adjusted for classes of property to actual values, except for agriculture land values which are based on productivity. Adjustments are based on assessments/sales ration studies as well as investigations and appraisals done by the state. The productivity formula for agriculture land use is based on agriculture prices and expenses. The state orders an adjustment if reported valuation is more than 5 percent above or below those determined by the state. Taxes are assessed against equalized property values and the rates are expressed per $\$ 1,000$ of valuation.

The taxable valuation in each school district determines the amount of state aid the district will receive. The Iowa school foundation aid formula requires that all school districts levy a uniform rate of \$5.40 per $\$ 1,000$ of taxable valuation. State aid is provided to adjust for the differing amount of revenue raised in each district. The relative property wealth is the primary factor in determining the property tax rates in a school district.

Figure 140 displays average taxable valuation per pupil for 1995-1996 through 2004-2005. Taxable valuation per pupil decreased for the first time for the years shown, declining from \$208,711 in 20032004 to $\$ 203,438$, a decrease of 2.5 percent. Despite a decrease in enrollment, the decrease in taxable valuation per pupil occurred because of an overall statewide decrease in taxable valuation of 2.9 percent between the 2003-2004 and 2004-2005 school years.

Figure 140

## Iowa Average Taxable Valuation Per Pupil 1995-1996 то 2004-2005

Source: Iowa Department of Management, School Budget Master Files. Note: Per pupil amounts are based on budget enrollments.

The district enrollment category <250 continued to have the highest per pupil taxable valuation, but the amount decreased 11.7 percent between 2003-2004 and 2004-2005. Only the enrollment categories with 2,500 students or more increased in taxable valuation per pupil from the previous year. This data reflects the overall decrease in agriculture valuation that occurred statewide (Table 161).

Table 161
Iowa Average Taxable Valuation Per Pupll by Enrollment Category 1999-2000 то 2004-2005

| Enrollment Category | Per Pupil Taxable Valuation |  |  |  |  |  | \% Increase |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1999-2000 | 2000-2001 | 2001-2002 | Year | 2003-2004 | 2004-2005 | to |
| <250 | \$262,531 | \$278,913 | \$304,370 | \$318,629 | \$331,663 | \$292,706 | 11.49\% |
| 250-399 | 216,057 | 229,985 | 245,596 | 256,863 | 265,819 | 250,786 | 16.07 |
| 400-599 | 208,769 | 222,895 | 235,100 | 237,557 | 245,237 | 218,758 | 4.78 |
| 600-999 | 191,868 | 201,732 | 213,650 | 222,930 | 231,320 | 213,623 | 11.34 |
| 1,000-2,499 | 165,805 | 175,204 | 185,643 | 192,412 | 195,663 | 186,911 | 12.73 |
| 2,500-7,499 | 166,072 | 175,250 | 184,676 | 192,689 | 198,647 | 203,978 | 22.83 |
| 7,500+ | 169,218 | 174,108 | 181,143 | 186,618 | 191,431 | 198,455 | 17.28 |
| State | 177,088 | 185,750 | 195,630 | 202,844 | 208,711 | 203,438 | 14.88 |

[^123]Table 162 provides information pertaining to the minimum and maximum taxable valuations per pupil within each enrollment category. The maximum per pupil taxable valuation decreased from $\$ 632,888$ in 2003-2004 to $\$ 535,598$ in 2004-2005. The smallest enrollment category $(<250)$ had a decrease in the maximum per pupil taxable valuation of 25.4 percent between those years. The statewide ratio of maximum per pupil taxable valuation to minimum per pupil taxable valuation was 5.0 to 1 , down from the previous year's ratio of 6.1 to 1 . The largest enrollment category $(7,500+)$ had the lowest ratio at approximately 3.0 to 1 in 2004-2005.

Note: Enrollment categories determined by budget enrollment rather than certified enrollment.

## Expenditures Per Pupil

General fund expenditures per pupil include expenditures on instruction, student support services, administration, operation and maintenance, student transportation, and central support. Expenditures that are not included in the per pupil calculation are expenditures for community service, adult education, nonpublic education, co-curricular activities, financial support for food service programs, area education agency flow through, inter-fund transfers, facility acquisitions, debt services, and interagency revenues from other school districts and area education agencies for services sold. Expenditures per pupil are calculated by dividing total general fund expenditures by the budget enrollments.

In 2002-2003, average general fund expenditures per pupil remained highest in the two smallest and the largest enrollment categories, continuing the pattern shown in the previous years. Statewide the average general fund expenditures increased $\$ 160$ ( 2.6 percent) between 2001-2002 and 2002-2003. The range of average expenditures per pupil was $\$ 1,428$ with the <250 enrollment category having the highest average per pupil expenditure and the 1,000-2,499 enrollment category having the lowest average per pupil expenditure (Table 163).

and Certified Annual Financial Reports.

Iowa dropped from 34th in 2001-2002 to 36th in 2002-2003 in public school average general fund expenditures per pupil, according to the National Education Association (NEA). The gap between the national average and Iowa's average increased from $\$ 717$ in 2001-2002 to $\$ 901$ in 2002-2003. Iowa had the second lowest ranking among the midwest states in 2002-2003. Table 164 and Figure 141 display National Education Association data on public school general fund expenditures.

## State Aid

Table 165 provides information pertaining to total Iowa government appropriations. This table has been modified for this edition of the Annual Condition of Education Report to include the final state aid and final general fund appropriations amounts from 2000-2001 to 2003-2004. This new information reflects changes to the initial appropriations (appropriations made during regular legislative sessions) in recent years. The final general fund appropriation is the adjusted appropriation amount reported at the end of the fiscal year. In FY 2004, there was a 2.25 percent across-the-board reduction and in FY 2002 the final total included a 4.3 percent across-the-board reduction to state foundation aid.

State aid programs for schools include School Foundation Aid, Educational Excellence, Instructional Support, Class Size Reduction, and Student Achievement/Teacher Quality. School districts receive state aid through appropriations made from the state's general fund each year. Funding for the Student Achievement/Teacher Quality program was initiated in 2001-2002. Funding for the Technology/School Improvement program ended in 2002-2003 and funding for Phase III of the Educational Excellence program was discontinued in 2003-2004. In 2004-2005, the initial state aid to school districts was approximately 45.4 percent of the initial total general fund appropriation. This percentage was the highest of all the years shown (Table 165).

Legislative action in 1996-1997 and 1999-2000 has impacted state aid amounts. In 1996-1997, the state foundation level was increased from 83.0 percent to 87.5 percent. In 1999-2000, the special education foundation level was increased from 79.0 percent to 87.5 percent. Although these foundation level changes did not increase school district budgets, they did increase the amount of state aid and lowered the amount of property tax.

| 1981-1982 | 621.0 | 1,762.6 | 35.2 |  |  |  |

[^125]
## Property Taxes

Average general fund levy rates and average management levy rates by enrollment category for 20042005 are displayed in Table 166. All 367 school districts levy for the general fund levy and the average tax rate for the state was approximately $\$ 12.19$ per $\$ 1,000$ of taxable valuation. In 2004-2005, the largest enrollment category ( $7,500+$ ) had the highest average general fund levy rate at approximately $\$ 12.95$ per $\$ 1,000$ of taxable valuation while the 600-999 enrollment category had the lowest average rate of approximately $\$ 11.48$.

The management levy may be used for paying tort claims, insurance premiums (except health insurance), unemployment benefits, and the cost of retirement benefits. There is no restriction on the management levy rate; however, the purpose for which proceeds may be used is restricted. Average management levy rate increased as the size of the enrollment category increased. Of the 367 districts in 2004-2005, 362 ( 98.6 percent) levied the management levy including all districts with enrollments over 600 (see Table 166).

Table 166

## Property Tax Rates and Number of Districts Levying Property Taxes for the General Fund and Management Fund for the 2004-2005 Year by Enrollment Category

Source: lowa Department of Management, Master Budget Files.
Note: Average Tax Rate per $\$ 1,000$ Valuation.

The number of districts that levied for the Regular and Voter-Approved Physical Plant and Equipment Levy (PPEL) by enrollment category for the 2004-2005 school year is shown in Table 167. School boards may approve a physical plant and equipment levy up to $\$ 0.33$ per $\$ 1,000$ of taxable valuation. School boards may request voter approval to increase the levy up to an additional $\$ 1.34$ per $\$ 1,000$ of taxable valuation for a maximum PPEL rate of $\$ 1.67$ per $\$ 1,000$ of taxable valuation.

In 2004-2005, 337 of the 367 ( 91.8 percent) school districts levied for the regular physical plant and equipment levy (PPEL). This is a substantial change from the previous year when 361 districts ( 97.6 percent) levied for the regular PPEL. Only the 7,500+ enrollment category had all districts that levied for the regular PPEL in 2004-2005.

The voter-approved PPEL also had a reduction in the number and percentage of districts that levied in 2004-2005. The percentage of districts that levied for the voter-approved PPEL decreased from 74.1 percent in 2003-2004 to 70.3 percent in 2004-2005. Overall, 258 districts levied the voter-approved PPEL in 2004-2005 at an overall tax rate of approximately $\$ 0.77$ per $\$ 1,000$ of taxable valuation.

Notes: PPEL means Physical Plant and Equipment Levy.
Average Tax Rate per \$1,000 Valuation.
Voter-Approved Physical Plant and Equipment Levy includes the 67.5 Cent Schoolhouse Levy that has expired.

Data pertaining to total property tax for the public education and recreation levy (PERL - also known as the playground equipment and recreation levy) and debt services levy is provided by enrollment category in Table 168.

The maximum property tax rate for the PERL is $\$ 0.135$ per $\$ 1,000$ of taxable valuation. In 2004-2005, 18 districts ( 4.9 percent) levied for the PERL. Of the districts that levied for the PERL, only one did not levy the maximum rate. The state average for districts that levied PERL was $\$ 0.1256$ per $\$ 1,000$ of taxable valuation.

In 2004-2005, 217 out of 367 school districts ( 59.1 percent) levied for the debt services levy for an average levy rate of $\$ 1.40117$ per $\$ 1,000$ of taxable valuation. The average levy rate decreased slightly ( 0.8 cents) from the previous year. Of the 81 districts in the 1,000-2,499 enrollment category, 64 ( 79.0 percent) levied the debt services levy, the highest percentage among all enrollment categories. The average tax rate for those districts that levied for debt services in the 400-599 enrollment category was nearly four times as great as the districts that levied for debt services in the 7,500+ enrollment category (\$2.31604 versus \$0.58493).

| Source: Iowa Department of Management, Master Budget Files, <br> Notes: PERL means Public Education and Recreation Levy. Average Tax Rate per \$1,000 Valuation. PERL also includes the Library Levy in the Clear Creek-Amana CSD. |  |  |  |  |  |  |  |

Taxes included in school district general fund include property tax for school foundation aid, instructional support property tax and income surtax, and educational improvement property tax and income surtax. The total amount of property taxes and estimated utility replacement excise tax and income surtax for school districts general fund and the total property tax levied for the management fund in 2004-2005 are shown in Table 169.

In general, the average general fund property tax and income surtax total increased with enrollment category. The two smallest enrollment categories (<250 and 250-399) were the only enrollment categories with total general fund taxes per pupil over $\$ 3,000$. All other enrollment categories had average general fund taxes per pupil of less than $\$ 2,700$. The amounts ranged from $\$ 3,666$ in the $<250$ enrollment category to $\$ 2,355$ in the 1,000-2,499 enrollment category, a difference of $\$ 1,311$. Statewide the total amount of general fund property tax and income surtax was slightly over $\$ 1.25$ billion.

All districts with enrollments over 600 levied for the management levy in 2004-2005. Statewide the average management levy amount per pupil was $\$ 179$. The largest enrollment category ( $7,500+$ ) had the highest management levy amount per pupil at $\$ 237$ while enrollment categories of 400-599, 600-999, and 1,000-2,499 were among the lowest at just over $\$ 150$ per pupil (see Table 169).

Note: Average per pupil amounts were calculated using budget enrollment.

Table 170 provides the total property taxes and estimated utility replacement excise tax and income surtaxes for the regular and voter-approved physical plant and equipment levy by enrollment category for 2004-2005. The regular PPEL is funded totally through property tax while the voter-approved PPEL is funded through property tax and may also be funded through the income surtax.

Although the 2004-2005 total amount of regular physical plant and equipment levy (PPEL) property tax decreased by over $\$ 2$ million and the number of districts that levied for the regular PPEL decreased by 24 , the average regular PPEL property tax amount per pupil decreased $\$ 16$ from the previous year. Of the seven enrollment categories, two ( $7,500+$ and $1,000-2,499$ ) had average regular PPEL property tax per pupil amounts below the state average of $\$ 71$.

Statewide in 2004-2005, the voter-approved PPEL totaled $\$ 71.6$ million for 258 districts. The property tax portion accounted for nearly 90 percent of the total while the income surtax was approximately 10 percent of the total. The total voter-approved PPEL increased as the enrollment category increased. The average voter-approved PPEL amount per pupil ranged from $\$ 160$ in the 1,000-2,499 enrollment category to $\$ 218$ in the 250-399 and 2,500-7,499 enrollment categories (see Table 170).

[^126]The state average debt levy per pupil was $\$ 303$ in 2004-2005, down from $\$ 311$ in 2003-2004. All enrollment categories with the exception of the largest enrollment category $(7,500+)$ were above the state average debt levy per pupil in 2004-2005. The 7,500+ enrollment category had an average debt levy amount per pupil of $\$ 128$, nearly one-fourth of the 400-599 enrollment category's $\$ 484$ debt levy per pupil.

## Income Surtaxes

Table 172 displays the number and percent of districts that use income surtaxes, surtax per pupil, and average surtax rate by enrollment category. The information displayed in Table 171 indicates that in general, the school districts in the smaller enrollment categories use the income surtax as a funding source at a higher percentage than districts in the larger enrollment categories. Statewide the use of income surtax as a funding source has increased from approximately 16 percent of districts in 1990-1991 to slightly over 78.2 percent in 2004-2005. Currently, only the two largest enrollment categories ( $2,500-$ 7,499 and 7,500+) do not have a majority of districts implementing the income surtax.

Average surtax per budget enrollment ranged from $\$ 269$ in the 250-399 enrollment category to $\$ 169$ in the 2,500-7,499 enrollment category in 2004-2005. Statewide the average surtax per budget enrollment was $\$ 216$, the highest of all years shown.

The average statewide income surtax rate in 2004-2005 was 6.51 up from 6.28 in 2003-2004. In general, the trend of the average income surtax rate has decreased as the enrollment category increased for the past several years with the exception of the largest enrollment category. Since 1995-1996, the 7,500+ enrollment category has had an average income surtax rate slightly above the 2,500-7,499 enrollment category, but lower than the other enrollment categories.

[^127]
## Instructional Support

The maximum amount that a budget may be increased through the instructional support program is 10 percent of the district's regular program cost. Once the program is enacted, districts receive state aid to fund a portion of the program and fund the remaining portion of the program through a property tax and if approved, income surtax. The instructional support program provides additional funding to a district and must be approved through board action or referendum. If the instructional support program is approved through a referendum, it may be imposed for up to ten years. Board enactment will allow the program to be in place for up to five years.

State aid for Instructional Support was frozen at \$14.8 million from 1992-1993 through 2003-2004. However, due to a 2.25 percent across-the-board reduction in FY 2004, the 2003-2004 state aid amount was reduced to $\$ 14.5$ million. For FY 2005, the state aid appropriation for Instructional Support was set at $\$ 14.4$ million (see Table 173). Because the number of districts that have implemented the instructional support program has increased through the years (see Table 173) and state aid for instructional support has not increased since 1991-1992, the percent of state aid as a percent of the Instructional Support Program revenues has decreased every year since 1991-1992. Property tax as a percent of total Instructional Support revenues has remained relatively stable over the years, staying close to 50 percent (Table 174). Income surtax as a percent of Instructional Support revenue has trended upward over the years, going from 22.3 percent in 1991-1992 to 36.2 percent in 2004-2005. Table 173, Figure 142, Table 174, and Figure 143 provide detailed information on Instructional Support Program revenue sources.

Table 173

Table 175 details Instructional Support Program by enrollment category. The number of districts that have approved the use of the Instructional Support Program has grown every year. In 2004-2005, 325 districts ( 88.6 percent) have an Instructional Support Program, up from 156 ( 36.7 percent) in 1991-1992. For the first time, all enrollment categories had over 80 percent participation in the program in 20042005, a change from 1991-1992 when no enrollment category had over 50 percent participation in the Instructional Support Program.

## Budget Guarantee (Budget Adjustment)

The Budget Guarantee Program changed significantly in FY 2005. In previous fiscal year's, districts that had a decrease in their regular program district cost were guaranteed 100 percent of the previous fiscal year's total regular program district cost. The provision was called the 100 percent Budget Guarantee. Legislation that passed during the 2001 legislative session changed that provision. Starting in FY 2005, 100 percent Budget Guarantee is being phased out and districts may receive a "scale-down" type of budget adjustment that is based on the FY 2004 total regular program district cost or a 101 percent budget adjustment that is based on the previous year's regular program district cost without any adjustment. The scale-down portion of the budget adjustment will end by FY 2014.

Table 176 provides information on the number and percent of districts receiving a budget guarantee and the per pupil amount by enrollment category. Statewide, the percentage of districts receiving the budget adjustment in FY 2005 increased slightly over the FY 2004 percentage ( 64.0 percent versus 62.4 percent - see Figure 144). Three districts in the largest enrollment category received a budget adjustment in FY 2005 while none in that enrollment category received that budget guarantee in FY 2004 (see Figure 144 also). The average amount of budget guarantee per pupil decreased as enrollment size increased in FY 2005, continuing the trend from the previous years. The < 250 enrollment category had an average budget guarantee amount per pupil of $\$ 605$ while the $7,500+$ enrollment category had an average per pupil amount of $\$ 5$ in FY 2005.

Notes: Enrollment categories determined by budget enrollment. Average per pupil amounts were calculated using budget enrollment.

Figure 144
Number and Percent of Iowa Public School
Districts with Budget Guarantee
1992-1993 то 2004-2005

Source: Iowa Department of Management, Master Budget Files.

Figure 145 displays the trend by enrollment category of the percentage of districts that received the budget guarantee for the years 1992-1993 and 2001-2002 through 2004-2005. All the enrollment categories and the state have had substantial increases in the percentage of districts receiving the budget guarantee since 1992-1993. The less than 250 enrollment category has increased 9.5 percentage points and the 7,500+ enrollment category has decreased 11.1 percentage points since 1992-1993. All other enrollment categories have increased at least 22.0 percentage points since 1992-1993 with the exception of the <250 enrollment category and overall, the state has increased 26.4 percentage points in that period.

## Bond Elections

Table 177 provides information on the number of districts that attempted bond referendums by enrollment category. Bond referendums require a "super-majority" of at least 60.0 percent to be approved. In 1985-1986, 10 bond elections were attempted with four elections being successful. In 2002-2003, 26 bond elections were attempted and 15 ( 57.7 percent) were successful. The two smallest (<250 and 250-399) and two largest (2,500-7,499 and 7,500+) enrollment categories had a 100 percent approval on their bond referendums in 2002-2003. The 1,000-2,499 enrollment category had the lowest approval percentage at 30 percent.

Table 177

Source: lowa Department of Education, Division of Financial and Information Services, Certified Annual Report.
Note: A district could be included more than once if it had more than one bond issue in a year, or more than one issue on a ballot.

The voter-approved physical plant and equipment referendum requires 50.0 percent approval to be approved. In 2002-2003, nearly 92 percent of the voter-approved physical plant and equipment referendums were approved. The number of districts attempting voter-approved physical plant and equipment referendums is shown by enrollment category in Table 178.

## Local Option Sales and Services Tax for School Infrastructure

Table 179 provides information on the local option sales and services tax for school infrastructure. As of the beginning of FY 2005, 90 of the 99 counties ( 90.9 percent) had approved the tax. The local option sales tax will generate estimated revenue of $\$ 243$ million in 2004-2005. Since 2002-2003, both the number of counties with the tax and the number of students residing in counties with the tax have more than doubled.

[^129]
## Total Elementary and Secondary Education Budgets

Elementary and secondary budget detail is displayed in Table 180 for 1985-1986, 2003-2004, and 20042005. The regular program portion continued to provide the highest percentage of funding at 63.5 percent, but also continued to decline as a percentage of the total. Special education continued to increase and accounted for 9.1 percent of the total in 2004-2005. The management levy increased by approximately $\$ 11$ million between 2004-2005 and 2003-2004. Instructional support increased by nearly $\$ 8.5$ million in 2004-2005.

State categorical funding includes Educational Excellence, Class Size Reduction/School Improvement, Technology/School Improvement (program discontinued starting with FY 2003), and Student Achievement/Teacher Quality. Federal funding was estimated based upon the most current year for which information was available. The miscellaneous category includes the federal funding estimate and the state categorical funding. Federal and state categorical funding accounted for approximately 8.1 percent of the total in 2004-2005.

[^92]:    Source: lowa Testing Programs, University of lowa.
    Notes: The descriptions below indicate how the typical grade 4 student at each achievement level performs with respect to the ITBS Reading Comprehension test:

    HIGH PERFORMANCE LEVEL
    Understands factual information; draws conclusions and makes inferences about the motives and feelings of characters; identifies the main idea; evaluates the style and structure of the text; and interprets nonliteral language.
    INTERMEDIATE PERFORMANCE LEVEL
    Understands some factual information; sometimes can draw conclusions and make inferences about the motives and feelings of characters; and is beginning to be able to identify the main idea, evaluate the style and structure of the text, and interpret nonliteral language.
    LOW PERFORMANCE LEVEL
    Understands little factual information; seldom draws conclusions or makes simple inferences about characters; rarely grasps the main idea, evaluates the style and structure of the text, or interprets nonliteral language.
    Percentages for each biennium period represent average percentages for the two school years represented, e.g., 1997-1999 represents the average percent of students at each achievement level for the 1997-1998 and 1998-1999 school year. Figures may not total 100 percent due to rounding.

[^93]:    Source: Iowa Testing Programs, University of lowa.
    Notes: The descriptions below indicate how the typical grade 4 student at each achievement level performs with respect to the ITBS test tasks that determine the Mathematics Total score:

    HIGH PERFORMANCE LEVEL
    Understands math concepts, solves complex word problems, uses various estimation methods, and is learning to interpret data from graphs and tables.
    INTERMEDIATE PERFORMANCE LEVEL Is developing an understanding of most math concepts, is developing the ability to solve simple and complex word problems and to use estimation methods, and is beginning to develop the ability to interpret data from graphics and tables.
    LOW PERFORMANCE LEVEL
    Is beginning to develop an understanding of many math concepts and an ability to solve simple word problems, is generally unable to use estimation methods, and is seldom able to interpret data from graphs and tables.

    Percentages for each biennium period represent average percentages for the two school years represented, e.g., 1997-1999 represents the average percent of students at each achievement level for the 1997-1998 and 1998-1999 school year.

    Notes: '-' Not available.
    ' 1 ' This state reported on an alternative July through June cycle rather than the specified October through September cycle.
    '2' The following states reported data using an alternative calendar in the years indicated: Alaska (1995-96 and 19992000), Ohio (1993-94), Wisconsin (all years except 1998-99), Wyoming (1993-94) and Puerto Rico (all years except 1997-98).
    3' Effective with the 1995-96 school year, Louisiana changed its dropout data collection from school-level aggregate counts reported by districts to an individual, student-record system. The increase in the dropout rate is due in part to the increased ability to track students.
    '4' New Hampshire is missing reported dropouts for 14 of their 76 school districts that operate high schools (16.3 percent of enrollment in the 76 school districts).

    Note: "-" Data not available.
    High school completers includes regular and other diplomas as well as other completers, but does not include high school equivalencies (e.g., GED). The completion rate is calculated by dividing the number of high school completers in agiven yearby the number of high school completers in that year and dropouts over a four-year period.
