PROBLEM IDENTIFICATION

Introduction

Each year, traffic crashes in the United States result in over 350,000 deaths and serious injuries. In 2000 alone, traffic accidents cost the nation an estimated \$160 billion, seven times more than the estimated cost of all crime. Highway crashes represent the leading cause of death and disabling injury for persons under age 35.

In recognition of this problem, the Congress of the United States enacted national highway safety legislation in 1966, which led to the establishment of the National Highway Traffic Safety Administration (NHTSA). The legislation also provided for federal highway safety monies to be made available to the states with a goal of reducing death and injury on the nation's roads. Iowa has been very active in the federal-state-local highway safety partnership since the mid 1960s.

We are justifiably proud of our success in reducing highway fatalities since that time. In 1966, 904 persons were killed in Iowa traffic mishaps. For 2001, the comparable total is 445, a reduction of 50%. This figure compares very favorably to the national highway fatality reduction of approximately 20% over the same time period. During 2001, Iowa will, for the second consecutive year, achieve a fatality rate per 100 million vehicle miles traveled (VMT) of less than 1.5. In 1966, the fatality rate peaked at 6.3; four times the present rate.

Alcohol-related fatalities in Iowa reached their lowest total ever in 2000 with 112 deaths. Twenty-five percent of all 2000 traffic fatalities were alcohol-related, the lowest percentage on record. Iowa's current statewide safety belt use rate of 81% rates us among the top 10 states in the nation. The 2001 statewide child restraint use survey shows a 79% usage rate, which is unchanged from one year ago. Despite these gains and the fact that Iowa figures compare favorably to national averages of 40% alcohol-related fatalities and 71% belt use, much remains to be done.

Improving restraint use and reducing impaired driving and other serious traffic violations continue to be essential building blocks in the creation of an effective, dynamic traffic safety program. A critical component of any successful program is the identification of the scope, magnitude and characteristics of the highway safety problem. Focusing limited resources on the most prevalent and costly (in terms of loss of life or serious injury) highway safety problems requires detailed knowledge of the types of accidents, drivers involved, occupant protection status, causative factors, road system, time of day/day of week, and a host of other important variables.

The major objective of this problem identification document is the determination of the relative severity of traffic safety problems in each of the 99 counties. The National Highway Traffic Safety Administration and the Iowa Governor's Traffic Safety Bureau are committed to the reduction of death and injury on the nation's roads. As part of its duty in administering federal traffic safety funds in the State of Iowa, the Governor's Traffic Safety Bureau conducts a comprehensive Problem Identification update each year.

Overview - Problem Identification in Iowa

In the past, problem identification efforts in Iowa (and many other states) concentrated heavily on alcohol-related traffic problems. While impaired driving remains the number one problem on today's roads; other important traffic safety concerns play a significant part in the current problem identification approach.

Legislative initiatives, education, public awareness, and widespread acceptance have combined to make occupant restraints an important traffic safety component. The end of the National Mandatory Speed Limit of 55 mph and the move by a number of states to raise speed limits has rekindled interest in the role of vehicle speed in serious and fatal accidents. Factors such as vehicle miles traveled and enforcement of OWI laws play an important part in the comprehensive evaluation of traffic safety problems. Most important is the actual record of fatalities, serious injuries, overall injuries, and alcohol involvement in traffic mishaps in each of the 99 counties.

In analyzing the relative severity of traffic related safety problems in each county, we have carefully selected eight quantifiable measures of serious traffic incidents. The Administrative Code of the State of Iowa specifies the inclusion of fatalities, alcohol-related fatalities, injuries, serious injuries, alcohol- related injuries, vehicle miles traveled, OWI revocations and motorcycle/pedestrian/bicycle fatalities/injuries in problem identification analysis for Iowa's federally funded 402 highway safety programs.

For evaluation purposes, each of the eight data elements has been given equal weight. The Administrative Code does not specify any particular emphasis on the individual elements, but because each element was worthy of inclusion in problem identification analysis as defined by the Code, equal consideration of each element was adopted.

Each county is ranked with the other counties in each of the eight traffic related problem areas from the highest number of occurrences to the lowest. In other words, if County X experienced an average of 40 fatalities per year; the highest in the State, County X would be ranked number one in terms of its fatality problem.

If County Y averaged 750 personal injuries per year and that figure was 15th highest among the 99 counties, County Y would be ranked number 15 in terms of its injury problem and so on.

After all categories have been analyzed, the problem rankings in all eight data groups for each individual county are averaged and compared, providing an overall or composite ranking for each county. The composite ranking is used to determine the relative need for federal 402 highway safety program assistance.

The National Highway Traffic Safety Administration recommends utilizing at least three years of data when conducting problem identification analysis. This analysis contains three years of historical data including statistics from 1998 through 2000 for all of the eight data elements.

While the ranking of key accident related statistics by county is the determining factor in assessing 402 program eligibility, it is only the first step in developing highway safety programs which are responsive to the problems and needs of a given county or community. A second step involves a closer examination of traffic related data from eligible counties or municipalities within those counties that have expressed interest in establishing local traffic safety programs with the assistance of 402 funds. Review and analysis of local accident data facilitates the targeting of limited 402 resources at the most prevalent traffic problems.

For example, program efforts with local county or city law enforcement or other public agencies may focus on high crash locations, time of day or day of week crash considerations or demographic profiles of the drivers over represented in injury and fatality crashes such as age and gender. Rural, urban, suburban classifications of injury/fatality crash locations, belt status of crash vehicle occupants, driver impairment, speed, stop sign or other violations related to the crash may also be important variables in further defining highway accident problems in a given county or community and in the selection of cost effective countermeasures to address these problems.

Supplemental Data

A variety of data relating to traffic crashes in Iowa, but not utilized in the problem identification overview is available. *Iowa Crash Facts*, formerly known as the Iowa Accident Fact Book, is available from the Iowa Department of Transportation.

1998-2000 IOWA TRAFFIC FATALITIES & FATAL CRASHES

	<u>1998</u>	<u>1999</u>	<u>2000</u>	% of Change <u>1998-2000</u>
TOTAL FATALITIES	449	490	445	-0.9%
TOTAL FATAL CRASHES	386	428	394	+2.1%

HIGHLIGHTS:

- The average number of fatalities for the three-year period, 1998-2000, is 461, down 22 fatalities or 4.7% from the 1995-1997 average of 483.
- Polk County remains the highest fatality county in the state with an average of 33 fatalities per year.
- Fatalities are more widely dispersed among the counties than any other data element used in the Problem I.D. analysis. Only nine counties average 10 or more fatalities per year while 49 counties average between three and seven fatalities per year.
- Because fatalities are relatively rare occurrences in the highway environment, the number of fatalities often varies significantly from year to year within the same county.

1998-2000 IOWA ALCOHOL & DRUG-RELATED FATALITIES

	<u>1998</u>	<u>1999</u>	<u>2000</u>	% of Change <u>1998-2000</u>
NO. OF ALCOHOL-RELATED FATALITIES	113	131	112	-0.9%
% OF ALL FATALITIES	25.2%	27.0%	25.2%	0%

HIGHLIGHTS:

- The three-year average for alcohol-related fatalities (1998-2000) in Iowa is 119, down 22 or 16% from the 1995-1997 average of 141.
- Alcohol-related fatalities have nearly been cut in half this decade, declining 46% from 1990 to 2000.
- Polk County leads all counties averaging six alcohol-related fatalities per year. Black Hawk County is second with a three-year average of 4.7.
- Only three counties averaged four or more alcohol-related fatalities per year with five additional counties averaging three fatalities per year.
- Ninety-one Iowa counties averaged less than three alcohol-related fatalities per year.
- Nine counties had no alcohol-related fatalities in the 1998 through 2000 period.

1998-2000 IOWA TRAFFIC INJURIES

<u>1998</u>	<u>1999</u>	<u>2000</u>	<u>% of Change 1998-2000</u>
37,662	36,969	36,808	-2.3%

HIGHLIGHTS:

- Overall, traffic injuries decreased from 1998 to 2000, falling by more than 800 or 2.3%.
- Polk County leads all counties, averaging over 6,000 injuries per year.
- Polk, Scott, Linn, Woodbury, Black Hawk, Pottawattamie, Johnson and Dubuque counties each averaged 1,000 or more injuries per year while Story, Clinton, Cerro Gordo and Webster counties averaged 500 or more traffic injuries annually.
- Forty-four Iowa counties averaged less than 150 injuries per year.
- On an average day, more than 100 Iowan's are injured in traffic crashes on our state's streets and highways.

1998-2000 IOWA MAJOR TRAFFIC INJURIES

<u>1998</u>	<u>1999</u>	<u>2000</u>	<u>% of Change 1998-2000</u>
3,479	3,632	3,700	+6.4%

HIGHLIGHTS:

- Serious traffic injuries totaled 3,700 for 2000, up 221 or 6.4% from the 1998 figures of 3,479.
- Polk County averaged over 500 serious injuries per year, the highest in the State.
- Seven counties averaged over 100 serious injuries per year while 13 more counties averaged 40-100 serious injuries per year.
- Fifty counties averaged fewer than 20 serious injuries per year.
- According to figures from the Iowa DOT, serious traffic injuries result in more than \$500 million in economic cost to society each year.

1998-2000 IOWA VEHICLE MILES TRAVELED (IN MILLIONS)

<u>1998</u>	<u>1999</u>	<u>2000</u>	<u>% of Change 1998-2000</u>
29,188	29,722	29,820	+2.2%

HIGHLIGHTS:

- Since 1990, vehicle miles traveled in Iowa have increased by more than 28%. Travel in Iowa reached nearly 30 billion miles in the Year 2000.
- Polk, Linn, Scott, Pottawattamie, Johnson and Black Hawk counties each averaged more than one billion vehicle miles traveled during the past three years. Only 19 counties averaged fewer than 100 million vehicle miles traveled annually.

1998-2000 IOWA OWI REVOCATIONS

<u>1998</u>	<u>1999</u>	<u>2000</u>	% of Change <u>1998-2000</u>
19,926	19,531	18,321	-8.1%

HIGHLIGHTS:

- OWI revocations in Iowa have declined both of the last two years. Over 1,600 fewer revocations were made in 2000 than in 1998. This factor, mirrored with the lower number of alcohol-related fatalities, would indicate a drop in the incidence of impaired driving in Iowa.
- Polk County leads all counties, averaging over 2,300 OWI revocations annually. Linn County is second in OWI revocations, exceeding 1,700 revocations annually.
- Three other counties (Johnson, Woodbury and Scott) averaged over 900 OWI revocations annually.
- Forty-nine counties averaged fewer than 100 OWI revocations annually.

3-YR TOTAL FATALITIES	92	16	65
3-YR TOTAL INJURIES	2,356	1,517	1,853

HIGHLIGHTS:

- Iowa motorcycle fatalities for 1998-2000 averaged 30.7 annually; up 3% from the 1994-1997 average of 29.8. Average annual motorcycle injuries declined 16% over the same time period.
- Bicycle injuries for 1998-2000 averaged 506, down 33 or 6% from the 1994-1997 average of 539.
- Thirteen Iowa counties totaled more than 100 motorcycle, bicycle, and pedestrian injuries combined during 1998-2000.
- Sixty counties averaged fewer than 10 bicycle/pedestrian/ motorcycle injuries annually.

PROBLEM IDENTIFICATION - COMPOSITE RANKING

The composite ranking reflects the overall magnitude of the highway safety problem in a given county in comparison to the other 98 counties in the State of Iowa. Because federal 402 funds for highway safety programs are limited and have been reduced substantially since the 1970s, it has been and continues to be necessary to determine a cutoff point for 402 program eligibility.

The top 22 counties in the composite ranking represent just over one-fifth or 22% of all of Iowa's counties yet they represent:

- Sixty-seven percent (67%) of Iowa's total population.
- Forty-seven percent (47%) of all traffic fatalities in the State.
- Forty-five percent (45%) of all alcohol-related traffic fatalities over the past three years.
- Seventy percent (70%) of all personal injuries, 64% of all serious traffic injuries, and 64% of all alcohol-related traffic injuries in the State.
- Sixty percent (60%) of all Vehicle Miles Traveled in Iowa over the past three years.
- Sixty-four percent (64%) of the OWI revocations that occur in Iowa each year.
- Nearly 75% of all bicycle, pedestrian and motorcycle fatalities and injuries each year.
- Historically, the top 22 counties in the statewide composite problem identification ranking have been eligible for 402 highway safety funds.
- Federal fiscal constraints continue to increase, making it impractical to exceed eligibility beyond the top 22 counties.

For these reasons, the top 22 counties will remain eligible for federal highway safety program funds during the fiscal 2002 funding period.

This does not preclude the remaining counties from working with the Governor's Traffic Safety Bureau. Our office offers a vast array of traffic safety education materials, staff experienced in alcohol and drug education training which includes a variety of youth/alcohol programs, seat belt and child restraint education, traffic and accident statistics as well as a wide range of other highway safety related services.

In addition, the GTSB utilizes non-402 federal highway safety funds to support special enforcement initiatives such as the Section 157 Occupant Protection Incentive Grant. All law enforcement agencies in Iowa with at least one full-time officer are eligible for this program, which currently involves 39 sheriffs' offices, 93 local police departments and the Iowa State Patrol in a total of 76 Iowa counties during the current year. A similar program will continue this effort when the current program year expires September 30, 2002.

Along with the services noted, counties not directly eligible for 402 funding do benefit from 402 expenditures in the State. Over 50% of federal highway safety program dollars spent in Iowa are invested in programs that benefit the entire State. Training programs offered through the Prosecuting Attorney's Training Council, the Iowa Supreme Court, the Iowa Law Enforcement Academy and the Iowa State University are good examples. The Governor's Traffic Safety Bureau also provides a variety of traffic safety brochures and informational items to any group or individual in the state requesting materials to promote traffic safety.

We actively encourage interested citizens, educators, law enforcement personnel, traffic engineers, county, judicial, health and social service professionals, government, community and business leaders, and any other interested persons to contact our office with their traffic safety questions and requests.
