

IOWA Department of REVENUE

Iowa Leading Indicators Index January 2009 Report

Tax Research and Program Analysis Section

The Iowa Leading Indicators Index (ILII) fell to 102.2 (100=1999) in January 2009 from a revised 103.2 in January. The Iowa non-farm employment coincident index fell by -0.10 percent for the month. Due to an annual adjustment by the Bureau of Labor Statistics (BLS) January is the third month in a row that has experienced a decrease in non-farm employment.

The ILII's value in January decreased 0.9 percent. The index has decreased for the last ten months from its peak value of 108.4 in March. During the six-month span through January, the ILII dropped 4.5 percent (a -9.0 percent annual rate). The six-month diffusion index (value of 18.8) reflects one of eight components, the agricultural futures price index, experiencing a 0.5 percent or greater increase over the last half year, while the remaining seven components experienced a 0.5 percent or greater decrease.

In January, one of the eight Iowa Leading Indicators components increased. The only positive contributor was diesel fuel consumption. The yield spread remained unchanged in January. The negative contributors were unemployment insurance claims (inverted), average weekly manufacturing hours, the Iowa stock market index, the new orders index, new residential building permits, and the agricultural futures price index.

Figure 1. Iowa Leading Indicators Index and Iowa Non-Farm Employment Coincident Index: January 1999-January 2009

Table 1. Iowa Leading Indicators Index: Six Month Overview

Monthly Values	2008					2009
	August	September	October	November	December	January
ILII	106.6	106.0	105.6	104.6	103.2	102.2
Percentage Change ^a	-0.4%	-0.6%	-0.4%	-1.0%	-1.3%	-0.9%
Diffusion Index ^b	12.5	25.0	31.3	12.5	0.0	18.8
Six-Month Values	Feb to August	Mar to September	Apr to October	May to November	June to December	July to January
ILII						
Percentage Change	-1.6%	-2.2%	-2.5%	-3.3%	-4.1%	-4.5%
Annualized Percentage Change	-3.2%	-4.5%	-4.9%	-6.5%	-8.3%	-9.0%
Diffusion Index	25.0	25.0	25.0	25.0	25.0	18.8

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced March 11, 2009.

a. Percentage changes in the ILII do not always equal changes in the level of the ILII due to rounding.

b. A diffusion index measures the proportion of components that are rising based on the actual changes (not the standardized contributions to the ILII). Components experiencing increases greater than 0.05 percent are assigned a value of 1.0, components that experience changes less than an absolute value of 0.05 percent are assigned a value of 0.5, and components experiencing decreases greater than 0.05 percent are assigned a value of 0.0.

Table 2. Iowa Leading Indicators Index Components: Six Month Overview

Component Series Monthly Values ^a	2008					2009	
	August	September	October	November	December	January	
AFPI ^b							
Corn (cents per bushel)	↓ ^c	526.7	542.3	546.9	546.2	541.3	533.1
Hog Profits (cents per pound)		11.2	11.4	11.5	11.8	11.9	12.4
Soybeans (cents per bushel)		1262.6	1281.1	1276.7	1267.0	1242.5	1219.1
Cattle Profits (cents per pound)		-3.8	-4.4	-5.4	-6.3	-7.5	-8.5
Iowa Stock Market Index (10=1984-86)	↓	64.77	64.29	62.77	61.04	59.04	57.02
Yield Spread (10-year less 3-month)	--	2.14	2.54	3.12	3.34	2.39	2.39
Building Permits	↓	686	659	669	652	641	611
Average Weekly Unemployment Claims ^d	↓	4,051	4,213	4,307	4,661	5,013	5,385
Average Weekly Manufacturing Hours	↓	40.9	40.7	40.4	40.1	39.8	39.5
New Orders Index (percent)	↓	51.0	48.2	46.1	44.9	42.1	39.1
Diesel Fuel Consumption (mil gallons)	↑	56.80	56.47	56.30	55.75	55.00	55.25

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced March 11, 2009.

a. For all component series except for the yield spread (the only national series) the values represent 12-month backward moving averages.

b. The agricultural futures price index is computed as the sum of the standardized symmetric percent changes in the four series, each weighted by the commodity's annual share of Iowa cash farm income (updated August 15, 2008).

c. Arrows indicate the direction of the series' contribution to the ILII for the latest month.

d. Changes in unemployment claims are inverted when added to the ILII, thus a negative change in the series contributes positively to the index.

ILII Components

- **Diesel fuel consumption:** Number of taxable gallons of diesel fuel sold in Iowa. Changes are calculated based on a 12-month moving average. During January 2009 this component's contribution to the ILII value was 0.07 as diesel fuel consumption for the month increased 5.7 percent relative to the prior year.
- **Yield spread:** Difference between the yield on 10-year Treasury bonds and 3-month Treasury notes. During January, the yield spread was unchanged from December. This component contributed 0.00 to the ILII.
- **Agricultural futures price index:** Composite measure of cattle, hogs, corn and soybeans futures prices weighted by the respective share of annual Iowa cash farm income. Changes are calculated based on a 12-month moving average of the futures price series, where the cattle and hogs series also incorporate estimates of break-even costs. During January 2009 this component contributed -0.06 to the ILII value as the 12-month moving average of expected hog profits increased while cattle profits, soybean future prices, and corn futures prices dropped.
- **Building permits:** Number of total permits issued in Iowa for the construction of residential housing units. Changes are calculated based on a 12-month moving average. During January 2009 this component contributed -0.14 to the ILII value. January permits fell 72.6 percent below the number reported in January 2008, pushing the 12-month moving average down by 4.8 percent. January 2009 permits were 76.6 percent below the historical average for January, based on reports from 1998 through 2008.
- **New orders index:** Diffusion index measuring the share of purchasing managers in Iowa reporting increases in orders received for manufacturing output. Changes are calculated based on a 12-month moving average. The monthly new orders index value fell in January to 10.7 from December's 19.6, and remained far below the January 2008 value of 46.7. This component contributed -0.17 to the January 2009 ILII value.
- **Iowa stock market index:** Capitalization-weighted index of 35 Iowa-based or Iowa-concentrated publicly-traded companies. Changes are calculated based on a 12-month moving average. In January 2009, 18 of the 35 companies and five of the 13 financial sector companies gained value. The index contributed -0.21 to the ILII value.
- **Average weekly manufacturing hours:** Weekly average of hours worked in the manufacturing sector in Iowa. Changes are calculated based on a 12-month moving average. During January 2009 this component contributed -0.22 to the ILII value as January hours were 8.7 percent below the January 2008 report, pushing the 12-month moving average down by 0.7 percent. This series was revised downward slightly for the last three months; the revisions resulted in a 0.1 downward change to the level of the ILII.
- **Average weekly unemployment claims:** Weekly average of initial claims for unemployment insurance in Iowa. Changes are calculated based on a 12-month moving average and are inverted when added to the ILII. During January 2009 this component contributed -0.23 to the ILII value with unemployment claims 98.6 percent above January 2008 claims. Some of the increase was due to layoffs in the manufacturing sector.

Table 3. ILII Components and Standardization Factors for FY 2009

Iowa Leading Indicator Components	Standardization Factor
Agricultural Futures Price Index	0.117
Iowa Stock Market Index	0.060
Yield Spread	0.239
Building Permits	0.028
Unemployment Claims	0.032
Average Weekly Hours	0.300
New Orders Index	0.055
Diesel Fuel Consumption	0.168

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced August 15, 2008. The standardization factors are the inverse of the standard deviation of the month-to-month changes in each component over the January 1999 to June 2008 period. These factors equalize the volatility of the contribution from each component and are normalized to one. The month-to-month changes are based on 12-month moving averages for all components except the yield spread, which is the only national series. The yield spread and new orders index changes are simple arithmetic changes; month-to-month changes for the rest of the components are computed as symmetric percentage changes. The factors are updated annually during the summer.

Comments

The Iowa Leading Indicators Index is designed to forecast the likely future direction of economic activity in the State of Iowa. The techniques used to build the ILII follow those used by The Conference Board to construct the national leading indicators index. A movement in the ILII for only one month does not produce a clear signal, rather it is necessary to consider the direction of the index over several consecutive months. The Conference Board considers a contraction signal in the national leading indicators index reliable when two conditions are met: 1. the index declines by at least two percent over a six month period (using an annual rate); and, 2. a majority of the individual components also decline over those six months (six-month diffusion index less than 50.0).

The Iowa Non-Farm Employment Coincident Index measures the change in non-farm employment of all workers in the State of Iowa. Changes are based on a 12-month moving average of employment and are computed as symmetric percentage changes. The index is designed to represent the current state of economic activity in Iowa.

The Employment Index and the ILII are constructed to have a value of 100 in the year 1999.
