

# FLOOD PLAIN MAPPING IN IOWA

In eight of the past 15 years Iowa has experienced flooding severe enough to result in Presidential Disaster Declarations. Despite this record of damaging floods, Iowa still lacks critical data on where flood waters will go. There is an urgent need to develop flood plain maps, according to the Governor's Institute on Community Design. Data does not exist for 47 counties and needs to be updated in the other 52.

After the floods of 1993, Army Brig. Gen. Gerald E. Galloway, a professor of engineering at the University of Maryland, led the White House study of the 1993 Mississippi River flood.

The general's study concluded that floods as large as the 1993 flood would probably occur again. It pointed out that people and properties were at risk, and that many did not understand the hazard they faced because the risks had not been well communicated. Adequate statewide flood maps can help communicate this risk.

The situation has not changed much since 1993. After the 2008 flood, Galloway said, "Efforts to require insurance for those living behind levees, to extend mandatory insurance requirements to other vulnerable areas and to better map flood risks all await action by Congress." In Iowa, we can take action.

When every minute counted, LIDAR generated accurate topographical maps used for predictive analysis during the 2008 summer floods. We were being asked to produce flood plain maps in minutes, not days. The readily available data prevented hundreds of thousands of dollars in damage. The data was crucial to protect real property.

— David Croll,  
GIS Corrdinator,  
Johnston, IA

## WHAT CAN FLOOD MAPS BE USED FOR?

Flood plain maps provide fundamental data on elevation of flood plains, which can be used for all kinds of decisions. The maps can protect lives and property both before and during a flood. Although there have been technical modifications and updates to the original paper maps of the 1970s and 1980s, current flood plain maps are often inaccurate and of low quality. Out of Iowa's 99 counties, only 52 are completely mapped.

Flood plain maps assist with emergency response and community planning, and can be used for such things as:

- Community land use planning and design purposes
- Insurance determinations
- Quickly allocating resources before or during a flood event

Flood Stage Inundation Maps help determine the boundaries of submerged areas based on different flood discharges before an actual flood. With this information available, cities can direct resources to critical areas before flooding occurs.

*Flood plain maps would not have saved downtown Cedar Rapids from extreme flooding in 2008. But maps did help communities like Cedar Rapids save lives as they evacuated people. Flood plain maps are badly needed in the 47 Iowa counties that do not have up-to-date information.*

## THE ROLE OF FLOOD PLAIN MAPPING

Flood plain maps can be used to reduce the effects of a disaster in many ways. The following are just a few examples:

- PLANNING:** To avoid construction in flood-prone areas
- PREPAREDNESS:** To develop an emergency action plan through the identification of homes, businesses and critical facilities
- RESPONSE:** To evacuate people and prioritize sandbagging in residential and business areas
- RECOVERY:** To help decision makers rebuild and allocate disaster assistance

## LIDAR TECHNOLOGY

Once again, in 2008, we learned that sufficient, accurate flood plain data is crucial for future flood preparation. In 2004, the state of Iowa invested in an innovative Light Detection and Ranging technology (LiDAR) for developing 2-foot interval topographic elevation maps for the entire state. With further advances in technology, LiDAR data could create flood plain maps that would be easily accessible to all state and federal agencies, and most importantly, to Iowa's citizens and businesses.

A flood plain map of the Birdland neighborhood in Des Moines was created with LiDAR data (left). It shows the areas that would be flooded by different water levels. Using the same data, planners can create a cross-wise view (below) or transect to show how deep the water will get in specific locations.

## WHAT'S THE NEXT STEP?

Under an existing contract, LiDAR has provided the data to develop both new and updated flood plain maps for all 99 counties. We now have the opportunity to use this foundation to create accurate flood maps and ensure a basic level of protection for all Iowans. For about \$150,000 per county, or \$15 million, every county in Iowa will have a published digital flood plain map. That's only about \$5 per person.

Once digital flood plain maps are created, they can be used to zoom in and assess risks for individual buildings based on predicted levels of river crests.

For more information on developing flood plain maps or questions on LiDAR, contact:

## PARTNERS

In 2004, the Iowa Department of Natural Resources along with the Iowa Department of Transportation, the Iowa Department of Agriculture and Land Stewardship, the United States Department of Agriculture Natural Resource Conservation Service and the State Pooled Technology Fund invested \$6 million in Light Detection and Ranging technology to gather the most accurate elevation data available today.

Developed for RIO by DNR and HSEMD - August 2008

## Using LiDAR to Scan Iowa from Aircraft

Shaded relief image using LiDAR derived elevation for an area near West Okoboji Lake, Dickinson Co.

Color infrared image of the same area, showing land cover.

Potential for sheet and rill erosion in the same area. Darker areas indicate higher erosion potential. Computed with the Revised Universal Soil Loss (RUSLE) equation using slopes based on LiDAR elevation data.

Potential for sheet and rill erosion, computed using slopes derived from currently available elevation data. Resolution (above) is much less detailed than slopes using LiDAR elevation data (left).

### 1) What is LiDAR?

- “Light Detection and Ranging”
- Process of scanning the earth with lasers from an aircraft to obtain accurate elevations.
- Similar to sonar (depth finder) i.e., time of travel is method of measuring distance.

### 2) What is being proposed by Iowa Dept. of Natural Resources (IDNR)?

- Obtain LiDAR coverage and accompanying aerial photography for the entire state of Iowa over a 2-year period (Fall 2006 – Fall 2007).
- Process LiDAR data, develop elevation maps for all Iowa counties, and make these maps and aerial photography available for public use over the Internet.
- Delineate floodplain boundaries for Iowa rivers and streams.

### 3) How accurate is LiDAR?

- Proposed project will generate elevation data which is within 8 inches of actual elevations (currently available statewide data has an accuracy of  $\pm 5$  feet).

- Data will support development of 2-foot contours that meet national map accuracy standards and Federal Emergency Management Agency (FEMA) requirements.
- Data points used to generate elevation data will be spaced an average of 5 feet apart or less.

### 5) When would the data be collected?

- Minor acquisitions will take place in the fall of 2006 and the fall of 2007. The majority will be collected in the spring of 2007.
- Spring, soon after snowmelt, is the ideal time.
  - No tree canopy to obscure mission.
  - Dense vegetation (grasses) are matted down from snow.
- Schedule will be adjusted as weather conditions dictate.

### 6) How will the data be made available?

- The data will be made available at no cost from a state website, in various formats, for all Iowans.
- Goal is to have data available on website within one year of collection.

Color-enhanced LiDAR view over Lake Darling, Washington County. Elevation is exaggerated.

Iowa Department of Natural Resources, Geological Survey  
109 Trowbridge Hall, Iowa City, IA 52242-1319  
(319) 335-1575  
www.igsb.uiowa.edu

### 7) What are the total costs associated with the LiDAR project? (estimated \$7.1 million)

- One year ago the best prices were around 50 cents per acre.
- U.S. Geological Survey (USGS) recently negotiated a sole source contract with a vendor that states are eligible to contract with for the LiDAR project.
  - Under this contract Iowa (IA) could be flown for 12 cents per acre.
    - 36,000,000 acres in IA x \$0.50 = \$18 million.
    - 36,000,000 acres in IA x \$0.12 = **\$4.3 million.**
- High-resolution photography (necessary complement to LiDAR for completing data processing and development of detailed elevation maps) ~ \$1.5 million.
- Infrastructure necessary to store and distribute data over website ~ \$200,000.
- Data handling, acceptance, quality control, distribution, etc. ~ \$520,000.
- Project administration/coordination ~ \$140,000.
- Delineation of floodplains ~ \$400,000.
- Funds would be allocated over the 2-year period as data are delivered to the state.

### 8) What are some uses of LiDAR data?

LiDAR will allow planners to greatly reduce and supplement field survey requirements for many Iowa businesses and agencies.

Examples include:

- Reduction of many infrastructure planning costs
  - Roadway siting, planning, and estimating
  - Utility line siting, planning, and estimating
  - Construction site planning and estimating
  - Soil conservation structure (terraces, sediment ponds, etc.) planning and estimating
- Risk assessment
  - Floodplain and flood insurance mapping
  - Erosion potential measurements and modeling
  - Emergency management and response planning
    - Dam breach inundation areas
    - Levee analysis
    - Spill routing

- Evaluating alternative infrastructure options
  - Utility lines
  - Roadways
  - Stormwater facilities
  - Pipelines
- Permit process improvement
  - Animal feeding operation siting with regards to floodplains and slope
  - Air emission permitting
  - Floodplain permitting for industrial/residential construction
- Education/research
  - Environmental science
    - Watershed modeling
    - Runoff modeling
    - Conservation practice performance
    - Watershed delineation
  - Engineering
    - Construction site planning
    - Development/use of automated planning tools
  - Development of new technologies – potential for yet unimagined applications

### 9) Who is going to do the work?

- USGS will contract to obtain LiDAR and photographic data.
- IDNR will coordinate the data collection project with USGS.
- IDNR will assume the responsibility of processing and serving the data via the Internet to Iowans.

### 10) How is the project being funded?

- ➔ Currently, partnerships among IDOT, IDNR, NRIS, and IDALS have committed the funds needed to acquire only the LiDAR data (\$4.3 million).
- ➔ To fully fund the complete project, an additional \$2.8 million is needed.

An example of LiDAR data can be seen on our interactive mapping website at [www.iowadnr.com](http://www.iowadnr.com)

Color infrared photography – 2002
