

## Western Worm Snake *Caphophis amoenus vermis*

**Habitat Preference:** Damp woodland areas along streams with fallen logs or other debris. Western worm snakes spend most of their time below ground and therefore are rarely ever seen.

### Threats:

- Removal of damp woodlands.
- Grazing
- Debris removal through firewood cutting and logging.
- Conversion of woodland to other uses
  - Agricultural development
  - Urban development

### Habitat Improvement Guidelines:

- Maintain woodland in areas known to harbor western worm snakes.
- Maintain fallen debris in woodland areas.
- Limit grazing within woodland areas.
