- The End of an Era with MPEG Video
- And much more

Thank You SYBAC for Another Strong Year

As the school year comes to a close, we want to thank the 2017-2018 Statewide Youth Broadband Advisory Council members for their broadband feedback. The following is a recap of recent topics that have been discussed during their monthly video meetings.

- **Facebook's data breach:** How much information do companies share about you?
- **Autonomous cars:** How soon will they be more common than not?
- **Consumer technology in the military.** Xbox controllers are being used in submarines to control the periscopes because they are cheaper and more intuitive.
- **Public Wi-Fi:** who is responsible for security? The user, the internet service provider, or the business who is offering it?

SYBAC 2017-2018

Hearing from the
Broadband Thought Leaders
of Tomorrow!

The End of an Era with MPEG Video

For 25 years, users have relied on our full-motion MPEG video conferencing service to enable their distance learning, telemedicine, training, and administrative applications. The MPEG service has been an integral part of our customer's daily operations to deliver their programs, content, and services. As planned, on June 30, 2018, the MPEG platform will be decommissioned.

At the height of the
MPEG usage, the
video classrooms
generated
over 300,000
conferencing hours
per year.
