FORWARD

The Iowa Conservation Commission has published information from fisheries research and similar investigational projects since 1935. Many appeared in scientific fisheries journals, while others were progress reports and job completion reports, printed by the department and disseminated through a mailing list. Each year we receive numerous requests from fisheries scientists worldwide for copies and reprints of these publications. The main purpose for this list was to compile and update all publications under a single cover. They have been separated into three broad categories; Scientific Journals and Technical Series, Quarterly Biology Reports and Job Completion and Progress Performance Reports. Compilation was restricted to an author index, since a subjective cross index would have been virtually impossible with our present library filing system and without considerably more detailed listing. An asterisk was provided for indicating availability of reprints. They can be provided on a first-come-first-serve basis. Xerox copies are also available for all Quarterly Biology Reports. Recognition should be given to Mrs. Kathy Schlutz for the tedious task put forth in compiling the publication list.
