

Transportation Coordination in Iowa

**Report to the Iowa General Assembly and Governor Kim Reynolds,
per Iowa Code section 324A.4**

**Prepared by the Iowa Department of Transportation, in cooperation with the
Iowa Transportation Coordination Council**

December 15, 2020

Introduction

The Code of Iowa, Section 324A.4, subsection 2, states the Iowa Department of Transportation (DOT) “shall biennially prepare a report to be submitted to the general assembly and the governor prior to December 15 of even-numbered years. The report shall recommend methods to increase transportation coordination and improve the efficiency of federal, state, and local government programs used to finance public transit services and may address other topics as appropriate.”

Iowa has long been a leader in transportation coordination, from designated public transit agencies covering the 99 counties with little duplication, to requiring any agency receiving public dollars for the provision of transportation to first coordinate with the local public transit agency before providing the transportation on their own, to the creation of the Iowa Transportation Coordination Council. Coordination allows Iowa to provide much needed transportation services to the citizens of Iowa with the most efficient use of public funds. Coordination has been an important topic in Iowa for many years, but during these times of economic constraint and restraint and Iowa’s changing demographics, coordination of transportation services becomes even more critical.

Background

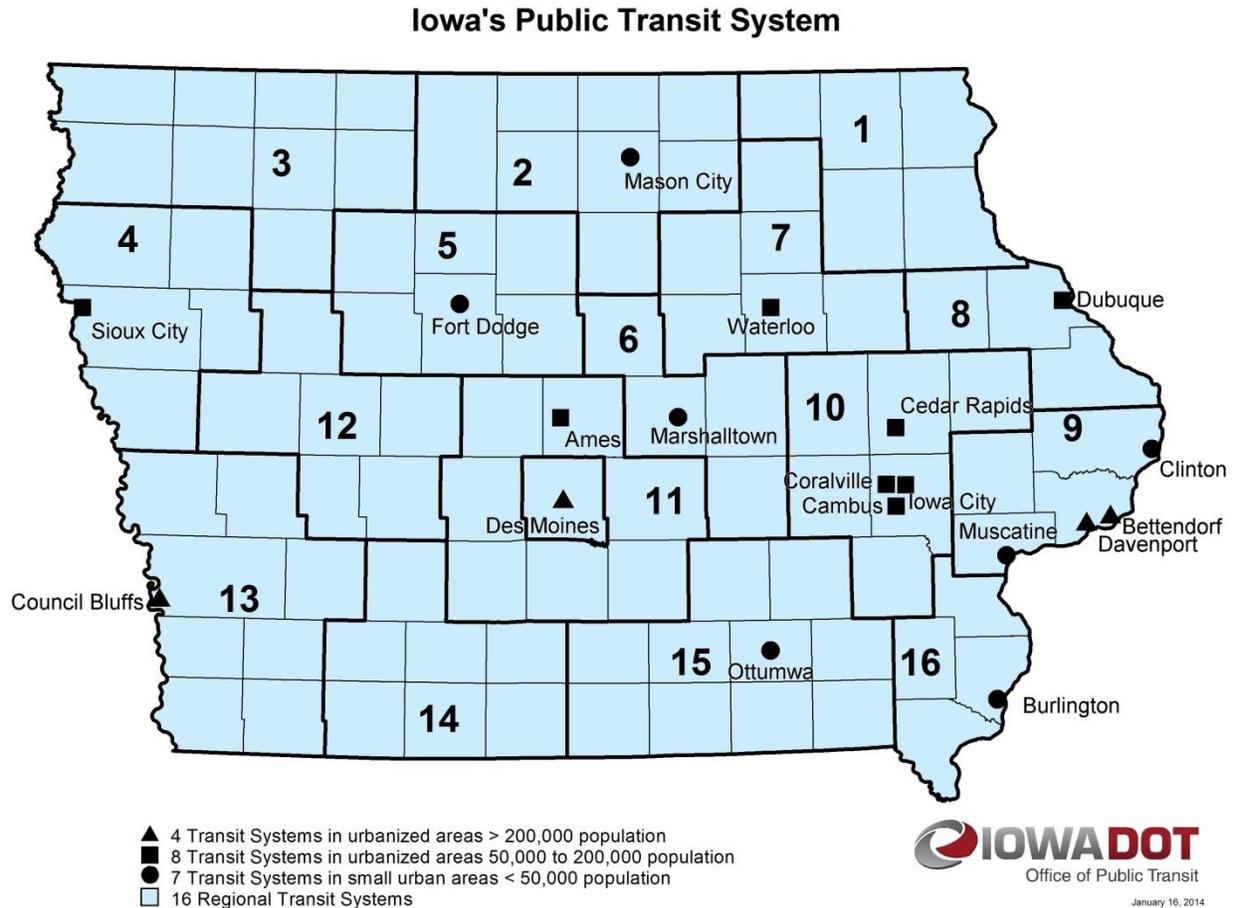

Iowa has 35 public transit systems, covering all 99 counties, served by 19 urban systems in cities and 16 regional systems that are multi-county in nature. These public transit systems provided approximately 19.3 million rides in Fiscal Year 2020. All transit services are open to the general public; trips are made to work, shopping, meal sites, medical appointments, social events, for any purpose a person desires.

The 19 urban systems typically operate as a department of their respective cities, with four systems as exceptions: CAMBUS as a department of the University of Iowa, Metropolitan Transit Authority of Black Hawk County as a stand-alone 28E organization, the Des Moines Area Regional Transit Authority as a stand-alone 28M organization, and Ottumwa Transit is operated by 10-15 Transit. Service in the urban areas can be classified as fixed route or ADA complementary paratransit. Fixed route operates along a set course with passengers accessing the service via the nearest bus stop, or, in some communities, flagging the bus down along the route. ADA complementary paratransit is available in zones around the fixed routes to those who meet certain disability qualifications under the Americans with Disabilities Act (ADA), with service provided as origin-destination with the bus picking the passenger up at their home, or other site, and delivering them to their desired location. ADA complementary paratransit trips are scheduled the day before the desired trip. One of the regional systems, 10-15 Transit, also operates a fixed route and ADA complementary paratransit service in the city of Oskaloosa. Oskaloosa is not included in the count of 19 fixed route systems, however, as the city is not large enough in terms of population to receive funding directly from the Iowa DOT for the service.

Iowa has 35 public transit systems, covering all 99 counties, served by 19 urban systems and 16 regional systems. Approximately 19.3 million rides were provided in FY 2020.

The 16 regional systems, ranging in coverage from three counties to ten, are set up either independently as non-profit organizations, by 28E agreement, or are housed within another agency such as a council of governments. Regional systems operate on a demand-response basis, with curb-to-curb or door-to-door service for passengers typically scheduling trips 24-hours in advance.

For more information on Iowa's public transit systems, please visit <http://www.iowadot.gov/transit/>.

Iowa Transportation Coordination Council

Meeting bi-monthly, the Iowa Transportation Coordination Council (ITCC), established by the Iowa Legislature, discusses passenger transportation issues affecting Iowa. The Iowa DOT Public Transit Bureau chairs and staffs the meetings. Members include representatives from Iowa Department on Aging (IDA), Iowa Department of Human Services (DHS) – Iowa Medicaid Enterprise (IME), Iowa DHS – Bureau of Refugee Services, Iowa Department of Public Health, Iowa Vocational Rehabilitation Services, Iowa DOT's Systems Planning Bureau, Iowa DOT's Driver and Identification Services Bureau, Iowa's Public Transit Systems, Iowa Developmental Disabilities Council, Iowa Department of Corrections, American Cancer Society, Iowa Public Transit Association, Iowa's Metropolitan Planning Organizations (MPOs) and Regional Planning Affiliations (RPAs), AARP, Access2Care, Iowa Mobility Managers Network, Epilepsy Foundation Iowa, Veterans Affairs, the Federal Transit Administration (FTA), and a public transit user and advocate.

Joining in 2020 were representatives from the National Center for Mobility Management, Iowa State University Extension, and the Iowa Association of Community Providers.

The ITCC serves as the statewide coordination advisory group, identifying gaps in transportation needs, barriers to coordination, and developing partnerships for solutions and transportation options. ITCC agenda items have included: American Cancer Society Road to Recovery Program, an Automated Vehicle Presentation, agency adaptations due to COVID-19, Coordinating Council on Access and Mobility Cost-sharing Policy Statement, *Statewide Mobility Management: Factors Affecting the Creation and Success of Networks* report, Medicaid Integrated Setting Rule implementation, ITCC Member Agency Spotlights, passenger transportation-related legislation, State Transit Long Range Plan, updates from the Statewide Mobility Manager and the Iowa Mobility Managers Network, and the 2019 Passenger Transportation Summit.

Because of relationships formed during these ITCC meetings, other cooperative and coordinated efforts occur. For instance, representatives from the Iowa DOT Public Transit Bureau are contributing to the American Cancer Society's Iowa Cancer Consortium Implementation Grant effort to increase outreach and understanding around patient resources and to increase the number of rides met through increased transportation options and to engage stakeholders in the design of solutions for sustainable transportation resources. ITCC members also have frequently included Iowa DOT Public Transit Bureau staff as speakers at various human service-related conferences to further educate attendees on public transit and mobility coordination in Iowa. For more information on the ITCC, please visit: <http://www.iowadot.gov/transit/itcc/index.html>.

2019 Passenger Transportation Summit

Since 2014, the ITCC and Iowa DOT Public Transit Bureau have organized an annual Passenger Transportation Summit. Held in Marshalltown the first three years, the Summit was held in Ankeny in 2017, 2018, and 2019, at the suggestion of summit attendees. Due to the COVID-19 pandemic, no Passenger Transportation Summit was held in 2020. The purpose of the annual summit is to bring many different disciplines together, from employment to health care, to discuss passenger transportation issues in hopes that attendees will learn they have more in common when it comes to planning for passenger transportation than they have differences.

The issues discussed during the May 23, 2019, summit were:

- Iowa DOT Public Transit Long Range Plan Process and Strategy Input
- Panel Discussion: Passenger Transportation Partnerships
- Panel Discussion: Identifying Transportation Needs
- Keynote: "Measuring the Benefits of Transit Services"
- Panel Discussion: Technology Use with Passenger Transportation

Attendance at these summits continues to reach over 100 each year. These summits are important for conveying information about all passenger transportation options in the state, coordination efforts that work and those that do not, and for the networking opportunity they provide.

Iowa Public Transit Long Range Plan

During the summer of 2020, the Iowa Department of Transportation released an update to the Iowa Public Transit Long Range Plan to reflect today's operating environment and current needs of Iowa's public transportation system.

The Iowa Public Transit Long Range Plan update has been under development over the last 18 months, including researching the historical trends in demographics and passenger transportation usage, forecasting future projected needs within the public transit system, and devising strategies to address any challenges.

Some of the key findings identified within the Iowa Public Transit Long Range Plan include the following.

- A number of challenges exist which inhibit the public transit system from achieving its potential, including use of older transit vehicles, having a limited pool of qualified transit vehicle drivers, perceptions of overcrowding on transit vehicles, and rapidly changing technologies such as on-demand ride hailing apps and automated vehicles.
- Iowa's rural transit regions continue to see a decrease in population and an increase in the age of riders while urban transit regions are experiencing population growth and an increase in population density. This presents unique challenges for ensuring all Iowans have adequate means of getting to work, to medical appointments, or any other destinations.
- Based on recent studies, there is a net positive return-on-investment for public transit, indicating that net economic benefits are realized for every dollar invested in providing public transit services.
- There is a current need to address accessibility of the public transit system for all riders while supporting workforce development by connecting employees with jobs. Recent pandemic responses also show a need to support essential segments of the economy by ensuring a reliable transportation system continues to operate regardless of disruptions.

To address the key findings, the plan defined a public transit vision statement along with overarching goal areas and strategies. The vision statement for public transit in Iowa is: "A public transit system that supports the physical, social, and economic wellbeing of Iowans, provides enhanced mobility and travel choices, and accommodates the unique needs of dependent and choice riders through rightsized solutions." To implement that vision, strategies were developed within the following goal areas.

- **Service:** The public transportation system is spread out across all of Iowa and offers a variety of types of transit service. This includes metropolitan areas that have fixed route service with bus stops, regional on-demand service that is scheduled ahead of time, and paratransit that

accommodates users with disabilities. The service strategies involve actions that could enhance, expand, or otherwise augment transit service in Iowa.

- **Partnering:** By establishing partnerships with other public and private entities, a more diverse array of resources can be leveraged across a much wider area. Partnerships enable organizations to offer a much larger selection of services that would otherwise not be available. The partnership strategies involve multiple entities working together to enhance transit options. Based on recent studies, there is a net positive return-on-investment for public transit, indicating that net economic benefits are realized for every dollar invested in providing public transit services.
- **Facility, Fleet, and Personnel:** When it comes to capital improvements and addressing personnel needs, many times the strategies reflect the kinds of investments that are not easily seen by the public. These strategies can take the form of facility construction and maintenance activities, which do not directly impact transit service, but indirectly influence a transit agency's ability to effectively administer it. Some direct impacts of capital improvements can be seen in the age or condition of buses. As capital assets such as the bus fleet increase in age, their maintenance costs increase, which can negatively impact services. The facility, fleet, and personnel-related strategies would help make sound investments for the agencies that operate public transit.
- **Funding:** The costs associated with nearly all aspects of public transit, particularly capital assets and operations, typically increase over time due to factors such as inflation. Compounding this issue is the fact that traditional funding to offset these costs comes from revenue streams that have remained relatively stagnant over time. Agencies are faced with dilemmas such as cutting staff or services in order to replace or maintain aging buses, or reducing the number of active buses in operation, which reduces the number of routes or their frequency. The funding strategies are aimed at improving transit operators' choices for effectively serving the public.

With the completion of this Iowa Public Transit Long Range Plan, the planning process transitions into implementation. During this phase, the Iowa DOT will expand on the partnerships it has formed with key stakeholders in order to help guide investments among all of Iowa's 35 public transit systems and support Iowa's vision of rightsizing the system.

As this Iowa Public Transit Long Range Plan is implemented through various projects and activities outlined in the strategies section, the impact of these efforts will be measured and used to refine Iowa DOT's approach to public transit and inform future Iowa Public Transit Long Range Plan updates. Instrumental to this implementation is the collaboration between key stakeholder groups including ITCC, IPTA, and MPOs/RPAs. This plan can be referenced by visiting: <https://iowadot.gov/iowainmotion/Modal-Plans/Public-Transit-Plan>.

Passenger transportation planning process

Iowa's MPOs and RPAs have facilitated a coordinated planning process to create passenger transportation plans and submit them to the Iowa DOT.

The goals of the passenger transportation planning process are to:

1. Improve transportation services to Iowans;
2. Increase passenger transportation coordination;

3. Create awareness of unmet needs;
4. Develop new working partnerships;
5. Assist decision-makers, advocates, and consumers in understanding the range of transportation options available;
6. Develop justification for future passenger transportation investments; and
7. Save dollars and eliminate overlapping of services.

Public transit projects to be funded with FTA Section 5310 (Enhanced Mobility of Seniors and Individuals with Disabilities) monies must be derived from a coordinated planning process. While only Iowa's large urban transit systems (over 50,000 in population) and two regional public transit systems receive Section 5310 funds annually, the Iowa DOT requires a coordinated passenger transportation plan from all areas of the state. This coordinated planning process brings together local stakeholders in transportation to identify transportation needs in the community. Projects such as medical shuttles, employment shuttles, a one-call/one-click project in eastern Iowa, transportation coordination summits and workshops, and the hiring of local mobility coordinators have come from the passenger transportation planning process. Bringing the right organizations together to discuss transportation needs incites coordination of ideas and resources and enhances the mobility of Iowans.

For a list of Iowa's MPOs and RPAs, please visit:

http://www.iowadot.gov/systems_planning/distplannercontact.htm.

Coordination efforts

Public transit agencies strive to coordinate transportation services within their community to the greatest extent possible, to the benefit of all involved. By partnering with the RPAs and local human service providers they work to create more efficient use of the public transit vehicles, cost savings to the coordinating agencies, and access to needed transportation services for the community. One of the biggest barriers to coordination in rural areas is the federal Charter rules (49 CFR Part 604). These rules prevent local public transit agencies from providing group trips to their local community members, groups such as daycares and social service organizations can no longer utilize public transit for trips because they are considered exclusive use of the vehicle for a negotiated price. These trips may only be provided if none of the registered charter companies in an area respond as able to perform a trip or if the public transit agency is able to provide the service for free. While large event transportation should be provided by private charter companies if available, small daycares cannot afford charter rates to transport their children to the local pumpkin patch, library, or zoo. In recent years, several of the regional public transit agencies in Iowa have had luck in notifying the local registered charter providers of requested trips, with none responding, and then providing these trips. However, it is still often the case that the public transit systems shy away from charter work because of the cumbersome rules, so these trips do not occur and learning opportunities are lost.

Another rule hindering the provision of public transit, especially in rural areas, is the FTA's School Bus Operations rule (49 CFR Part 605). Written with urban fixed routes in mind, this rule does apply to rural, demand response systems. With many school districts limiting the areas in which transportation to

students is provided, including within city limits or with limited stops along a route, parents look to the public transit agencies to provide transportation for their children. Public transit agencies must be careful, however, to ensure this service does not look exclusive to school children, even though parents are individually scheduling and paying for their own children and does not cause other general public riders from being denied rides. Like the Charter rule, explained above, some public transit agencies turn down requests for school transportation from parents to ensure compliance with the rule. The School Bus Operations rule also was a hinderance to coordinating transportation to in-person schooling during the COVID-19 pandemic as school districts reached out to public transit agencies in trying to find ways to provide student transportation while being mindful of spaced seating and social distancing. Ultimately, the majority of Iowa school districts did find transportation solutions through their own school bus providers, but public transit not being able to be part of the solution because of this rule was unfortunate.

Social service agencies

Human service agencies, counties, nursing homes, sheltered workshops, etc. are all able to transport their clients to medical appointments, work, and social activities by public transit without the expense of purchasing, maintaining, fueling, and insuring a vehicle. Staff time is also saved because an employee is not required to take time out of their workday to transport perhaps as few as one person to an appointment. Unfortunately, public transit days and hours of service do not always provide enough coverage for social service agencies to take full advantage of this coordination effort and sometimes funding sources may dictate the transportation provider to be used. Overall public transit demand, driver availability, vehicle availability, and operational funding factor into hours and days public transit is available to assist social service agencies with their transportation needs. Discussions are always on-going to increasing all of those factors. Working to eliminate funding silos where funding sources prescribe the transportation provider or have restrictions about who may ride a vehicle would also boost coordination in this area.

Aging community

Many of Iowa's public transit agencies receive Federal Title IIIB funding through their respective Area Agencies on Aging (AAA) to provide transportation services to those aged 60 years and over. Eligible passengers living independently typically pay only a donation for the transportation service received. This partnership is valuable, allowing seniors who may not be able to drive or do not want to drive to remain in their homes as long as they desire.

Several public transit agencies also contract with their local AAA for volunteer drivers. These drivers use their own vehicles to transport one or two passengers at a time for the public transit agency. These trips often are from areas not frequently served by public transit or require great distance of travel which would make the trip cost prohibitive for the passenger if provided by a public transit vehicle and driver.

In 2020, during the pandemic when so many of Iowa's elderly were socially isolated, another important role for several public transit agencies became that of meal and grocery delivery service. Partnering with the local AAA, fresh or frozen meals were placed on public transit vehicles and delivered to seniors. The FTA allows up to 20 percent of a federally-funded vehicle's usage to be for incidental services, such as

meal deliveries. This partnership ensured many older Iowans received the nutrition they needed during a time when leaving their homes to shop or visit meal sites was not the safest option.

Another function of Iowa's AAAs is to serve as their region's Aging and Disability Resource Center or ADRC. In this role, AAA employees assist and counsel persons who are aging or have disabilities about the benefits for which they are eligible. Understanding the public transit system is useful to this counseling role.

In June 2012, the Iowa DOT was awarded a grant from the FTA's Veterans Transportation and Community Living Initiative (VTCLI) grant program. With this grant and working with the Iowa Department on Aging and the Iowa Department of Veterans Affairs on the No Wrong Door project, a master information, referral, and assistance (IR and A) database was created, including transportation services available around the state. The database is used by a one-call center of linked sites, typically AAAs, to answer questions and provide "warm" transfers to the appropriate resources. The IR and A database and LifeLong Links website are maintained by the Iowa Department on Aging and more information can be found at iowaaging.gov/programs-services/supportive-services/lifelong-links.

Public health

The Iowa DOT is one of the many partner agencies providing input on and taking responsibility for addressing Iowa's critical health needs through annual updates to *Healthy Iowans: Iowa's Health Improvement Plan*. In addressing the transportation issues in the plan, the Iowa DOT committed to: "Provide transportation to health care services by making available State Transit Assistance Special Project funds to Iowa's 35 public transit agencies." The Iowa DOT Public Transit Bureau annually sets aside STA funds to provide grant funding to Iowa's public transit agencies for start-up of new projects, an example of which could be medical transportation.

Starting in 2017, the Iowa DOT and IDPH partnered with Iowa Healthiest State and Blue Cross Blue Shield's Healthy Hometown Initiative, to develop the *Iowa Walking College*. This effort attracts individuals and organizations who have a passion for creating a more walkable community; through a series of trainings and assignments, participants develop a knowledge of ways to work with local officials to advocate for positive change within their community.

Non-emergency medical transportation

In April 2016, Iowa's Medicaid system was contracted out to three managed care organizations (MCO), each responsible for providing non-emergency medical transportation to their respective eligible clients. At the time of this report's writing there are now two MCOs, both utilizing the same transportation broker, Access2Care. In the four and a half years since MCOs took over Medicaid management within the state there have been as many as three transportation brokers. Any time a transition happens with either the addition or departure of a transportation broker, the public transit agencies must quickly negotiate or contracts with the brokers and learn a new portal and database system in order to ensure those needing rides to medical appointments have them. Differences in policies from broker to broker is difficult on

transportation providers, as procedures can vary. Also, timeliness in receiving payments from the brokers has been an issue for several public transit agencies over the years, making cash-flow tight at times.

A newer challenge to passenger transportation coordination in the state relates to a rule change by Iowa Medicaid Enterprise in December 2017 for persons on the Medicaid Intellectual Disability Waiver. Persons on this waiver, and their provider, receive funding under a tiered rate structure. Prior to December 1, 2017, transportation services were paid on top of the tiered rates. After the rule change, transportation costs were included in the tiered rate structure, therefore each person and their respective service agency had less overall funding to spend on a daily basis. To save money, some service providers have ended arrangements with local public transit agencies and have begun providing transportation internally. These agencies have either purchased vans for providing the transportation or are using staff cars. While not intentional, this has created a challenge in fulfilling the transportation coordination requirements of Code of Iowa Section 324A.4.1 which reads in part:

An organization, state agency, political subdivision, or public transit system, except public school transportation, receiving federal, state, or local aid to provide or contract for public transit services or transportation to the general public and specific client groups, must coordinate and consolidate funding and resulting service, to the maximum extent possible, with the urban or regional transit system.

The public transit agencies are willing and able to provide the needed transportation services for the Intellectual Disability Waiver clients and since ending the contracts with the human service agencies for these services public transit agencies have reported significant loss of revenue that has reduced public transit services for all users. Discussions with Iowa Medicaid Enterprise, their service providers, and the public transit agencies may be productive in determining an agreement for providing Medicaid Waiver funded transportation.

Mobility management

Mobility management has become a major focus area over the past 10 years both nationally and in the State of Iowa. Mobility managers, or mobility coordinators as many are known, assist individuals in navigating beyond Point A to Point B, no matter the number of modes of transportation required, and truly understanding the individual needs of transit riders. Mobility coordinators may provide travel training, showing persons how to ride the bus if they have never had that experience. Mobility coordinators also meet with human service agencies, businesses, and other organizations to inform them of the public transit services available to inspire more collaboration. Currently mobility coordinators are located in Region 8, Region 11, Johnson County, Linn County, and Polk County.

One position unique to the State of Iowa is the statewide mobility coordinator. These responsibilities are provided by an Iowa DOT Public Transit Bureau staff member, in addition to their regular duties as Transit Programs Administrator. In the past two years, the statewide mobility coordinator has worked with the Iowa Department of Corrections, Iowa DOT Motor Vehicle Division, and the Iowa Cancer Consortium to give presentations and understand the value of and ways public transit can improve for their constituents.

The statewide mobility coordinator administers the Iowa Mobility Manager's Network, providing technical assistance to mobility coordinators and associated staff around the state, and serves as a contact for customers not served by a regional or urban mobility coordinator, assisting with travel navigation and providing referrals to local transportation providers.

While mobility management is an eligible expense under several FTA programs available to Iowa's public transit agencies, these funding sources are often fully committed to funding public transit operational activities rather than mobility coordination. Separate, specific funding programs for mobility management no longer exist under the current federal transportation law, therefore creation of new positions requires a real local commitment to the mobility management concept. Many transit systems believe mobility management to be a good idea but are unable to free up already committed funding to pay for an additional staff person. Several transit agencies have realized mobility management is a function of the work performed by existing transit agency staff through community outreach and educational duties, allowing the mobility management network to expand and grow. Regions 3, 13, 16, and Council Bluffs/Omaha are examples with staff providing mobility management services in addition to their regular job duties, as needed.

For more information about mobility management, please visit:

<http://www.iowadot.gov/iowamobilitymanagement/index.html>.

RideShare and commuting options

Included in the previously mentioned VTCLI grant was statewide ride matching software, where veterans and the general public can locate others with similar origins and destinations in order to share transportation costs. The website, www.iowarideshare.org, went live in 2016, to serve as Iowa's ride matching resource. There are currently 164 total vanpools in the system.

Over the past couple years, the Iowa DOT has focused on coordinating efforts across bureaus and divisions to address mobility and accessibility challenges. One such coordinated effort is the 380 Express commuter bus. Intended to relieve congestion during the reconstruction of I-380 between Cedar Rapids and Iowa City, the 380 Express began operation on October 1, 2018. 380 Express is a service of CorridorRides (public transit Region 10) and is operated by a private company under contract. In the past two years, nearly 35,000 rides were provided in FY2019 and approximately 59,000 rides were provided in FY2020. Ridership is expected to continue increasing as construction-related traffic impacts continue and more people become familiar with the service. More information on 380 Express can be found at <https://380express.com/>.

Assisting those unable to drive

Iowa DOT's Public Transit Bureau and Driver and Identification Services Bureau have collaborated to create a more inclusive online experience for customers seeking driver licensing assistance. While all the information provided is current, a typical customer needs to visit several pages to gather useful information regarding licensing renewals, restrictions, reinstatement or medical suspensions.

Customers are able to access information on a web-based landing page, online or via the 511 mobile application. The goal was not to recreate webpages, but simply bring them all together into one easy-to-use location, allowing customers to access vital information before arriving at a driver license station. If driving is not an option or choice, alternative modes are highlighted as a safe option to get around, including additional resources for life services provided by various other state agencies. Discussion of this 'one-stop' webpage started with the Statewide Mobility Manager presenting brochures at an ITCC meeting regarding conversations with loved ones when they are too aged or are too infirm to drive safely. That discussion led to the ITCC encouraging the Iowa DOT to take those brochures a step further, making them all encompassing for those unable to drive for a number of reasons such as seizures, age, legal issues, disability, etc. The *Get There Your Way* website can be found at www.iowadot.us/getthereyourway.

COVID-19 Pandemic Effect on Public Transit

The COVID-19 pandemic hit in March 2020, about 75 percent of the way through FY2020. While the final numbers are not yet available, FY2020 statewide ridership did drop an estimated 20 percent from FY2019. Some systems saw ridership decreases as high as 34 percent. At the height of business and school closures in Spring 2020, ridership had fallen by as much as 85 percent for some systems. As a result of and/or causing these ridership drops were transit agencies stopping service entirely for a time or cutting route services within certain areas of a community.

Knowing what a vital service public transit is, Iowa's public transit agencies found ways to re-open and adapt to make their services safer. COVID testing for drivers and front-line staff became important, either

Clear shower curtains hung to protect transit drivers from virus particulates.

with in-house testing or other arrangements made with local testing sites, to ensure peace of mind for the transit passengers and employees. Most agencies – at least temporarily – stopped collecting fares to alleviate the interaction between passenger and driver. On longer fixed-route vehicles, boarding and exiting the vehicle was commonly only allowed at the rear door to protect the health of the driver. Barriers were constructed surrounding the driver compartment to cut down on particulates passed between driver and passenger; some barriers as simple as inexpensive shower curtains, shown in the photo, and others custom made plexiglass enclosures. Mask use was recommended if not required. Buses are being cleaned more frequently to try to stop the virus spread. Rows of seats have been blocked off to facilitate social distancing. Some transit systems are also

using more robust air cleaners to kill airborne germs in the vehicles.

The ways public transit helped people stay safe at home became almost as important as the number of riders transported this past year. As highlighted earlier in the report, several transit agencies were

contracted to provide meal and grocery delivery to aging Iowans and those most vulnerable in our population, keeping them healthy at home.

Iowa's transit agencies were the recipients of federal CARES Act funding, paying for up to 100 percent of the operating deficit for services after January 20, 2020. Iowa DOT's Public Transit Bureau administers the distribution of those funds to the small urban and regional systems while large urban systems receive their CARES Act dollars directly from the FTA. Iowa DOT's Public Transit Bureau also coordinated the distribution of face masks provided by the FTA for every transit driver in the state.

It is hard to predict the long-term impacts of the pandemic on future public transit ridership and service. It remains to be seen how many former commuters continue to telework after the virus is under control, possibly reducing the need for express and commuter routes. More leisure trips may pick up for the elderly and those with health conditions after they feel safer leaving their homes, restoring some public transit ridership, especially in the rural areas. For others, this health crisis may make them permanently shy away from crowded buses in favor of single passenger transportation options, like those provided by Uber and Lyft. Public transit will need to remain flexible to continue serving as a viable transportation mode.

Recommendations

1. In order to increase transportation coordination and improve efficiency, the Iowa DOT recommends consideration of legislation that allows transportation costs to be eligible expenses for all state human service programs. If a person requires assistance from a human service-type program, it is likely they have difficulty securing transportation to access the benefits afforded to them. For instance, if a person is on a Medicaid waiver, with medical and employment-training transportation covered, it is very likely that person will also need transportation to a job once the training period has ended. Often the limited hours worked and low wages make paying for transportation a burden. However, this transportation is vital for including all persons within their communities. The Iowa DOT and ITCC will encourage agencies providing those services for state human service programs to coordinate transportation needs with the local public transit provider. These transportation services are not without cost, however, and solutions for making the transportation to work and other quality of life activities affordable must be found.
2. Having a transportation benefit under the Medicaid program is extremely important to ensuring Medicaid recipients – persons with limited income or serious health conditions – receive needed preventive medical treatment, helping to ensure those persons do not have more serious and costly medical emergencies down the road. Lawmakers are encouraged to continue covering transportation as a Medicaid benefit to ensure clients can travel to their medical appointments and treatments, even if the Federal government offers waivers to this requirement. Providing transportation to the routine, non-emergency appointments reduces emergency room visits and costly ambulance trips, saving the Medicaid program in the long run.
3. Another barrier to coordination is state and federal rules surrounding funding of transportation. For example, some services only allow riders on their vehicles that are directly tied to the program

funding source. Efficiency of the passenger transportation system could be improved by allowing a cross-section of the population to ride a publicly-funded transportation service, whether those funds are originally intended for veterans, aging lowans, various human service agencies, or the general public. Iowa DOT will evaluate the viability of estimating the cost savings that could be realized if rides could be shared between the various agencies providing and funding transportation.

4. At the city and county level, transportation access – public transit, in addition to roads – should be considered when new services are being started and when new developments are being proposed. Businesses will only survive if their employees and customers can get to work. The Iowa DOT recommends developers and community planners to consider public transit availability early in the approval process when considering new commercial developments. One step in the right direction is Iowa Economic Development Authority's (IEDA) Certified Sites program. IEDA asks the Iowa DOT for input on available transportation in the area of a potential certified site, including public transit services, prior to the site's approval.
5. Iowa has one of the oldest transit fleets in the nation. The state needs a funding mechanism for replacing and expanding public transit vehicle fleets. The federal government, through the transportation reauthorization bill, FAST Act, provides minimal formula dollars to Iowa and a highly competitive grant program for replacement vehicles. And while Iowa has been successful in securing grant funding annually, it is never a sure thing. Public transit services are only as good as the vehicles providing them. Iowa's public transit systems work hard to keep vehicles in a state of good repair well beyond their useful lives, but eventually vehicles wear out and must be replaced. A reliable funding stream for this purpose is needed and options should be explored at the federal, state, and local level.
6. Federal charter rules (49 CFR Part 604) are stifling some coordination efforts in the state of Iowa. Since its adoption in 2008, the federal charter rule has put an end to many community group trips which had been provided by public transit. Efforts to change these rules are ongoing and support from legislators and other parties to work with Iowa's congressional delegation would show the importance of this issue to Iowa and enhance the likelihood of change.
7. Likewise, Iowa's rural, demand response systems need clarification on the applicability of the Federal Transit Administration's School Bus Operations rule (49 CFR Part 605). If rides are properly, individually, scheduled and paid for and trips to a local school fill the better part of a bus at a couple times a day, this service may not pass the 'reasonable person' test – viewing the service as exclusive to school. It is the opinion of the Iowa DOT this is simply efficient scheduling by the rural public transit system and is not exclusive school service. Efforts to change these rules are ongoing and support from legislators and other parties to work with Iowa's congressional delegation would show the importance of this issue to Iowa and enhance the likelihood of change.

Conclusion

Many coordination efforts are in place in Iowa with efficiencies being realized. This fact can be touted and celebrated. However, more work can be done. Funding silos at the federal and state level must be reduced for the efficient funding of transportation services for those that need it. Greater coordination can be achieved if the various agencies charged with providing services to citizens work together to provide the necessary funding and coordinated transportation services. A majority of the example successes seen to date, started with a conversation. With transit managers and mobility coordinators out talking in the community and engaging human service providers barriers have been eliminated, opportunities have been realized and Iowans have been better served. The conversations need to continue, and participation needs to be broader. Government programs must be allocated the necessary funding to provide these important services and the rules must be flexible enough to allow for innovation in coordination. Through the coordinated efforts of the agencies, Iowans will experience enhanced quality of life and mobility and Iowa will continue to be a great place to live.
