THE ADMINISTRATIVE OFFICERS.

THE UNIVERSITY.

George Edwin MacLean, Ph. D., LL. D., President.

Elmer Almy. Wilcox, B. A., Secretary of the University Senate.

Thomas Huston MacBride, Ph. D., Director University Extension.

WILLIAM CRAIG WILCOX, M. A., Secretary University Extension.

Herbert Clifford Dorcas, M. A., University Examiner.

Edward Cecil. Barrett, B. A., Registrar.

Mable Montgomery Volland, B. A., Acting Dean of Women.

Forest Chester Ensign, M. A., Inspector of Schools.

Colonel Charles Warren Weeks, U. S. A., Commandant of Cadet Battalion.

THE COLLEGES.

LAENAS GIFFORD WELD, M. A., Dean of the College of Liberal Arts.
CHARLES NORLE GRECORY, LL. D., Dean of the College of Law.
JAMES RENWICK GUPHRE, M. D., Dean of the College of Medicine.
GEORGE ROYAL, M. D., Dean of the College of Homeopathic Medicine.
WILLIAM SUITS HOSPORD, D. D. S., Dean of the College of Dentistry.
WILBER JOHN TEETERS, PH. G., Dean of the College of Pharmacy.
CARL EMIL SEASHORE, PH. D., Dean of the Graduate College.
WILLIAM G. RAYMOND, C. E., LL. D., Dean of the College of Applied Science
ISAAC ALTHAUS LOOS, LL. D., Director of the School of Political and Social
Science and Commerce.

FREDERICK ELMER BOLTON, Ph. D., Director of the Summer Session, and Director of the School of Education.

WALTER LAWRENCE BIERRING, M. D., Vice-Dean of the College of Medicine WILLIAM LE CLAIRE BYWATER, M. D., Vice-Dean of the College of Homeopathic Medicine.

EDWARD CECIL BARRETT, B. A., Secretary of the Faculties.

THE HOSPITALS.

MARY ELIZABETH NESBIT, Graduate Nurse, Superintendent of the University Hospital, and Principal of the Training School for Nurses, College of Medicine.

WILLIAM LE CLAIRE BYWATER, M. D., Director of the Homeopathic Hospital.

MARGARET M. EARLE, Graduate Nurse, Superintendent of the Homeopathic

Hospital, and of the Training School for Nurses, College of Homeopathic

Medicine.

THE LIBRARIES AND MUSEUMS

MALCOLM GLENN WYER, B. A., B. L. S., Librarian.

MERTON LEROY FERSON, LL. B., Law Librarian, and Secretary of the Alumni Association.

CHARLES CLEVELAND NUTTING, M. A., Curator of the Museum of Natural History.

HENRY FREDERICK WICKHAM, Assistant Curator of the Museum of Natural History.

BOHUMIL SHIMEK, M. S., Curator of the Herbarium.

FRANK DE WITT WASHBURN, B. A., Curator of the Museum of Art and Archaeology.

SENATE BOARDS.

ADVISORY, ON GENERAL NEEDS OF THE UNIVERSITY-The Deans.

ATHLETICS-Professors Smith, Teeters, Byers, Bush, Van Epps.

AUDIT-Professors Seashore, E. A. Wilcox, Weeks, Starbuck, McClintock, Mr. McChesney.

COMBINED COURSES-Professors Loos, Weld, Royal, Hosford, Bierring, Teeters, Rockwood, Houser, Horack.

Inter-Collegiate Oratory and Debate-Professors Gordon, W. C. Wilcox, E. A. Wilcox, Ansley, Raymond.

LIBRARY—Regent Holbrook, the President, Professors Hayes, Dean, Rogers, Titzell, C. E. Gordon, Mr. Wyer, Secretary. (Liberal Arts to elect members.)

Music-Professors Weller, Prentiss, Gordon, Guthe, Washburn.

Publications—Professor Macbride, the President, Professors Wilson, Becker, Albert, Flom, Guthe, Ford, Horack.

SECONDARY SCHOOLS; ENTRANCE EXAMINATIONS—Professors Calvin, Bolton, Shimek, Dorcas, Ensign, Higbee, Weller.

THE STATE UNIVERSITY OF IOWA
OFFICE OF THE SECRETARY OF THE BOARD OF REGENTS
IOWA CITY, IOWA, October 15, 1908.

TO HIS EXCELLENCY, HON. ALBERT B. CUMMINS,

Governor of Iowa.

Sir,—I have the honor herewith to submit the report of the Board of Regents of the State University of Iowa for the years 1906 to 1908.

Very respectfully,

W. J. McChesney, Secretary of the Board of Regents.

REPORT OF THE BOARD OF REGENTS.

To His Excellency, Hon. ALBERT B. CUMMINS, Governor of Iowa.

Sir,—The Board of Regents of the State University of Iowa have the honor to submit to you their report of the progress and work of* the University during the two years beginning July 1, 1906 and ending June 30, 1908, and of its present condition and needs.

The reports of the President, of the Secretary and Treasurer of the Board, and of the Registrar, which accompany this report and are made a part hereof, give full and detailed information as to the work done, and conditions of the University, also detailed and itemized statements of moneys received and expended by the Board, with full lists of professors, instructors, and other employes, during the biennial period, with the salaries paid to each.

WORK OF THE LAST TWO YEARS.

Your Board is able to report substantial progress during the last two years. The work in all colleges and departments has been vigorously prosecuted in the effort to meet the constantly increasing demands by the young men and women of the State for University instruction.

After many years, the University is coming into its own heritage, in its ability to adequately meet these demands. In its buildings, its laboratories, its libraries, and in a measure, in its instructional force, the University is no longer at a disadvantage, when compared with institutions of like grade elsewhere. The increase of an even five hundred students to its annual enrollment during the last two years attests the thorough appreciation by the youth of our State, of the increased and increasing value of this better equipment, now for the first time found at home, equaling or approaching that to be found elsewhere. This large and steady growth in recent years has only been possible through the wise and liberal policy of the General Assembly in seeking to take care of our own young people who are in constantly increasing numbers intent on securing the best mental and moral equipment for the demands of our age and country.

13

LEGISLATIVE VISITS.

It has been the custom of the General Assembly during recent sessions to devote one day to a personal inspection of the work and progress of the University. It is the hope of the Board that the policy can be continued. The Board courts inspection from the law-makers of Iowa, to whom are intrusted, from session to session, the promotion of the best interests of the State.

When our State celebrated its semi-centennial anniversary, twelve years ago, the University had but two creditable buildings namely, the Old Capitol and the Old Science Hall, the latter erected ten years earlier at a cost of some \$50,000. During the earlier months of that year, 1896, the General Assembly inaugurated a policy that has revolutionized the institution in a decade. It was by the act of providing a small millage tax for the erection of University buildings. There are now six substantial fire-proof stone buildings of the best type and most modern equipment besides four other large brick structures that are a credit to the State, all grown out of an insignificant millage tax.

PROGRESS IN BUILDINGS.

During the last two years the Hall of Natural Science, the new Hospital wing, and the addition to the Engineering Building have been completed and occupied. The Hall of Natural Science, besides housing the departments of zoology and biology with their superb collections and laboratories, contains also, temporarily, the general library and the large assembly room, occupying the central portion of the three lower floors. The building contains fifty rooms, and every part is fully occupied.

The completed University Hospital contains eighty-five rooms and is already so crowded with patients as to require the renting of two adjacent dwellings in which to house the nurses.

The extension of the Hall of Engineering is completed. This building now has an area of 60x240 feet; the east half, three stories and a basement, the new part as it extends down toward the central heating plant, five stories in height. Its completion, September 1st, permitted the College of Applied Science to vacate one of the old sheds erected 7 years ago, over the foundation of the Old Medical and South Hall buildings, burned March 10, 1901, and to permit its removal from the campus.

The Steam Engineering Laboratory was completed last year at a cost of about \$9,000. It has been equipped with steam engines.

gas engines, a refrigerating plant, apparatus for testing steam appliances, and is proving a very useful adjunct to the department of mechanical engineering.

The number of students in engineering has nearly doubled in two years, and trebled in the last three. They will probably, within the year, occupy all the added space, and already need large increase of shop room.

The President's House is nearing completion. When adequately furnished, it will be a credit to the University and the State, and will materially aid the President in the administrative work of the University.

The Plant House for botany, a modest little structure, erected near the Old Science Building, has long been a real need of this department.

THE HYDRAULIC POWER HOUSE.

The Power House at the dam is proving a useful factor in University economics. It already furnishes us light and power which, if purchased at commercial rates in Iowa City, would cost us above \$15,000 a year.

THE LAW COLLEGE BUILDING.

The College of Law, after forty years' occupancy of the Assembly Halls of the Old Capitol building, will at last find suitable and adequate quarters in the new building now under contract for completion December 20, 1909, at the corner of Jefferson and Capitol streets. The contract was let July 24, 1908, to Collins Bros, Rock Island, Illinois, the lowest of twelve bidders, for \$102,490.00. It will be of Bedford stone, 55x133 feet in dimensions, and three stories in height, with basement. The estimated additional cost for plumbing, heating apparatus, hardware, etc., is \$19,950. The estimates for its equipments are \$12,000, which should be provided for by the Thirty-third General Assembly.

SPECIAL LAND FUND, THIRTY-SECOND GENERAL ASSEMBLY.

The Thirty-second General Assembly appropriated twenty-five thousand dollars for the purchase of additional land for the law building. The tracts purchased with this fund are as follows:

 These four purchases comprise a tract 150 feet on Capitol street and 130 feet on Jefferson street. This land was occupied by four dwellings. One was sold, one removed by the owner, and two, the large De Sellem and Dennis houses, were removed by the Board to University property east of the hospitals. They will be used temporarily, one for boarding house for women and the other for additional quarters for nurses.

OTHER SPECIAL FUNDS VOTED BY THE THIRTY-SECOND GENERAL ASSEMBLY.

The funds appropriated at the last general session for equipment of new buildings, for library support, general equipment and supplies, paving and walks, repairs and contingent, and care of grounds, have all been used as designated. Detailed reports of these expenditures are contained in the accompanying Secretary's biennial report.

ADDITIONAL SUPPORT VOTED.

The additional annual support fund of \$35,000, voted two years ago, proved wholly inadequate. The Board was seriously embarrassed at every session during the last biennium in its efforts to make the income meet in any adequate way, the constantly increasing needs of the University in its phenomenal expansion, and the increasing complexity of its work. The last year 247 students registered for graduate work. This is the most difficult, most expensive, and most valuable work the University can do. It requires expensive equipment, and an instructional staff of the highest order of talent and preparation. It has been more difficult than ever before to retain our best instructors, and still more difficult to fill the places made vacant by resignations.

The Graduate College, which is the University College proper. now enters upon a crucial period. It has been in existence only eight years, and has been carried upon a wave of enthusiasm during this period. Now, as we compare ourselves with other graduate colleges, we must answer two questions. First, have we the facilities for graduate work? Second, have we the men who are prepared and have opportunity to conduct graduate work on a proper plane? The Graduate College asks for no separate appropriations but joins most earnestly in the appeal now made to this session of the legislature for increase in salaries and increase in library appropriation.

The greatest demands upon the library come from the Graduate College. Graduate work means research. In all departments which do not have laboratory facilities, research means library work. Therefore, when one department receives \$500 for apparatus, another should receive \$500 for books. On the other hand the demand for books is equally great in those departments which have laboratories, for it is futile to attempt to run a laboratory without an adequate reference library. If Iowa, is going to hold its own with Michigan, for example, it must have such library support as Michigan has.

Success of the Graduate College demands that the professors who conduct graduate work shall be mature men of established success and reputation—authorities in their respective fields of research. They must have opportunity for travel, intensive study, participation in meetings of large associations, and the command of private libraries and equipments. Such men can be obtained and held in the long run, only upon receipt of adequate salaries.

NEEDS OF THE LIBRARY.

The present needs of the Library are so great, so varied, and so urgent, that it seems best to present them in the report of the Library Board as submitted by Librarian Wyer to the President, May 1, 1908:

President George E. MacLean and the Honorable Board of Regents:

Gentlemen,—The Library Board begs leave to call your attention to the urgent need of some immediate action in regard to the book fund of the University Library. The Library has been absolutely starved for the last three years, and has never had an adequate appropriation since the fire of 1897. It is true that a special fire tax was provided to replace the burned Library, which yielded about \$45,000 in the six years ending June, 1903, but it is equally true that only \$8,300 was appropriated for the general support of the Library during these six years. Thus the average annual support fund during the six years for the libraries of the University, except the Law Library, was under \$9,000, which is less than it should have been even had there been no fire. I present the following figures to show the comparison of the support given to the libraries in the neighboring universities:

		Kas.	Mo.	Neb.	Minn.	Mich.	m.	Wis.	Iowa
Appropriation binding and for the last Appropriation	periodicals five years.	\$ 43,500	*\$70,000	\$ 51,000	*\$63,000	\$110,000	\$105,000	\$125,000	\$ 35,000
	periodicals	7,500	15,000	16,938	12,000	†25,000	25,000	23,000	5,000

^{*}About. +\$20,000 appropriation, \$5,000 endowment.

A dissection of the annual appropriation of Michigan and of Iowa shows our standing as to the different colleges:

Michigan	Iowa
General and Liberal Arts\$11,000	\$3,175
Medical 3,500	600
Homeopathic	100
Dentistry	. 50
Pharmacy	75
Engineering 2,500	250
Law	750
\$20,000	\$5,000

The most discouraging feature is shown in the following figures: Fixed expenditures for

Periodicals\$1,	
Binding	750
Continuations	400
Law Library continuations	900

This allows only 23 per cent of the total appropriation, or \$1,150.00, to be expended for the purchase of books for the General Library and the libraries of the Colleges of Liberal Arts, Applied Science, Law, Medicine, Homeopathic Medicine, Pharmacy, and Dentistry. Michigan, with an expense of about \$5,000.00 for these same items, has 75 per cent of its appropriation available for the purchase of books.

The gaps in our collection are so many and wide as to be a descredit to a university library. In blography, where we have no adequate lives of even the Presidents of the United States; in history, where we have absolutely nothing on some really important countries in the world; in literature, where numberless classics and masterpieces are conspicuously absent; in works for reference and general reading we are lamentably weak. And of the urgent needs of the various departments, I have on file in my office ample proof which is at your disposal at any time. The work of every college in the University is seriously crippied by the lack of proper library facilities for either graduate or undergraduate work.

Our present appropriation is not sufficient even to make up for the natural wear and tear on the books, so that the library is really going backward. The appropriation should not be a special one, renewed by each General Assembly, but should be a fixed annual one so that the Library could be developed systematically and according to an established policy. It should also be large enough to enable us to make extensive purchases of standard authorities and transactions within the scope of the Library as well as to secure a broad selection of the current publications.

In consideration of these facts, the Library Board very respectfully petitions that a special effort be made to secure for the University Library a fixed annual appropriation of not less than \$30,000, from the Thirty-third General Assembly.

Respectfully submitted.

(Signed) LIBRARY BOARD. By M. G. Wyer, Librarian. SUMMER SESSION AND SCHOOL OF EDUCATION.

The Summer Session has grown to be an important part of he University work. The attendance has steadily increased in seven years from 100 to 370. Nearly half of these students take work in education. Many of them are high school teachers, principals, and superintendents.

The demand for university work in education is increasing everywhere. No department of work is growing so rapidly in universities throughout the country, as the work in the better training of teachers. To meet this demand in Iowa, our summer session should be extended to nine weeks. There is no institution except one of higher learning which is equipped to give breadth and variety of view to the high school teacher, the principal, or the superintendent. School boards are fapidly requiring college and university trained men and women for their important positions. If the State does not provide adequate training in the University, these men and women will go outside the State to secure such training. So great is the demand that the summer session students, first in conference, and second at the convocation, passed resolutions asking the Board of Regents to extend the time of the summer session and the scope of the department of education.

Colleges and schools of education in sister universities have been organized recently to meet the demand. The School of Education in the University complements in the highest professional work that of the State Normal School. For many years the graduates of the Normal have moved to the University for this training, with the approval of the Normal auhorities. A harmonious relation has thus been established between these two institutions.

Superintendents, principals, and high school teachers are attracted by professional courses offered, such as a university can alone provide. The Graduate College is coming to be an important factor in the work of training teachers. A majority of our graduate students, also, have the teaching profession alone in view. The University ought to be prepared to offer all such applicants opportunities equal to those obtainable elsewhere. Large numbers of such persons are looking about for advanced positions and for advanced professional work, who will come to the University as soon as such graduate instruction is offered. With the present appropriations this has been impossible. Some departments have to be wholly omitted, others are inadequately equipped.

The Board has not yet found it possible to appropriate above \$6,500 for the six weeks summer session; but this sum does not attract the best instructors, nor offer a sufficient number of courses.

To meet this demand in Iowa as it should be met will require a very material addition to its teaching staff, the payment of better salaries, and a much better equipment than it now has. The work done in this department reacts directly upon the high schools, and indirectly upon the entire school system, in advancing the general efficiency.

UNIVERSITY EXTENSION.

The University was among the first in the United States to offer university extension lectures. In 1900 this work became so important as to call for an organization of a university extension department, of which Prof. Thomas H. Macbride was made Director and Professor W. C. Wilcox, Secretary. The principal upon which university extension rests is a fundamental one in a State University, namely, that the institution must serve the public welfare not simply by the teaching within its gates, but by the work outside its gates throughout the State. What the State College of Agriculture and Mechanic Arts has done so admirably in the broad field of agriculture, the University is bound to do for all humanity in its varied interests and organizations.

University extension has developed so as to include not only instruction by lectures, but correspondence study, bureaus of general information and welfare, and contributions to debating and public discussions. A constant demand is made upon the University for vocational and avocational instruction in the various counties of the State. The demands come from many quarters, not simply from the graduates and students, but also from teachers, librarians, ministers, lawyers, doctors, dentists, pharmacists. journalists, engineers, superintendents, bankers, women's clubs, public officers, home-keepers, social workers, apprentices, artisans, mechanics, foremen, accountants, farmers, merchants, manufacturers, salesmen, clerks, bookkeepers. The demand made from these sources makes it necessary that in addition to the regular staff of instruction, the University have a small staff of specialists devoted to this work. A relatively small appropriation will enable the University to meet this legitimate demand upon it for adult and practical education throughout the homes of all portions of the State. University extension in this form has passed the

experimental stage, as is shown by the experience of sister and national institutions.

REPAIR AND CONTINGENT FUND.

The University has now more than twenty-five buildings to maintain and keep in repair, of a value exceeding \$1,300,000. Not less than one and one-half per cent, or \$20,000 is needed for their upkeep. The ordinary business man's percentage of two and a half per cent would aggregate \$32,500 annual expenditure.

Many of the buildings are old, and the new buildings should not be allowed in the least to deteriorate. Their very excellence demands the best and immediate attention. Seven years ago, and again five years ago, the Board made an earnest appeal for an annual appropriation of \$10,000 to be used for this purpose. Neither appeal was granted, but the Thirtieth General Assembly made an annual appropriation of \$7,500 for repair and contingent fund; and the Thirty-second General Assembly made an additional special appropriation for the biennium of \$2,500 a year. In addition to these sums the Board has been compelled to make constant appropriations from other funds to keep up the necessary repairs to make necessary changes incident to the removals to new buildings, and to provide for the increased attendance of students and consequent increase of rooms with their equipment.

In addition of \$12,500 to the annual repair and contingent fund will no more than keep the University's numerous buildings in ordinary repair, even with careful and economical management.

MECHANICAL STOKERS AND ADDITIONAL BOILER AND ENGINE ROOM EQUIPMENT.

The growth of the University in new buildings requires corresponding increase in capacity of its heating and power plants. The central heating plant is now overtaxed and the new Law Building will make an additional boiler necessary. The chimney is not large enough to carry another boiler with natural draft but will be ample with mechanical draft apparatus. Two years ago we asked for mechanical stokers for the plant, and pointed out the advantages and economies to be obtained thereby. We now renew our request for the stokers, including them for the additional boiler in the central heating plant and also for the hospital heating plant. If stokers of the underfeed type are installed, being provided with forced draft, they will at the same time furnish the

additional chimney capacity required. The cost for fuel next year will be about \$20,000, and for boiler-house-labor about \$6,000. A saving of at least ten per cent it is estimated, may be made on each of the above items by the use of mechanical stokers, to say nothing of the freedom from smoke which is damaging our buildings and equipment at present.

We also ask for a coal and ash conveyor to replace our present antiquated method of wheel barrow handling, which should result in an additional saving of \$500 a year. Appropriations for additional steam piping and a boiler feed pump to meet the increased service are also necessary.

The new hydraulic power station on the Iowa river has proven a success, and electric energy is being generated and used by the University in amount which at current prices would equal the entire cost of the plant in about three years.

The dynamo capacity is already fully taken and with the addition of the Law Building it will be necessary to take out the 50 k. w. machine and replace it with one of double that size, request for which is contained herein. This plant, like any similar one, is subject to interruption by floods in the river, and to insure continuity of service, it is necessary to have steam equipment for emergency use. An appropriation is therefore asked for this purpose. The use of electricity for light and power is so intimately connected with the operation of the University that any interruption in the service would paralyze the institution for the time being, should it occur.

An appropriation for bunkers for the storage of coal is another matter of importance, the necessity for which has increased with the growth of the University. The present storage capacity at the central plant is only enough for two weeks' supply with bunkers full, and with our railroad facilities, the uncertainties of shipments are so great that we have found it practically impossible to insure a supply with our limited storage; and narrow escapes from a shut-down and freeze-up have been frequent, some times avoided by sheer good luck. The storage capacity at the hospital is less than five days' supply with full bunkers, entirely inadequate for an institution of that character. The continued operation of the separate heating plant for the hospitals, made necessary by the overtaxing of the central plant, has also proven a measure of economy since the character of the service there is so unlike that required for the rest of the University. The repair

and operation of the hospital plant is therefore permanently necessary.

The above askings are summarized and itemized below. All of the estimates have been carefully made, and are vouched for as being only what is necessary for the purposes mentioned.

1 300-h. p. boiler for central heating plant\$4	1,000
11 automatic stokers for central heating plant	9,200
2 automatic stokers for hospital heating plant	1,700
Steam piping, coal and ash conveying machinery, central	
heating plant	3,500
Boiler feed pump for central plant	500
Engine and dynamo (100-k. w.) for central plant	3,500
Coal bunkers for central plant	4,000
Coal bunkers for hospital plant	1,000
100-k. w. dynamo for hydraulic power station	1,200

ADDITIONAL GROUNDS NEEDED.

Five years ago the Board asked for \$50,000 for additional lands, closing the report with the following suggestions:

It would doubtless be good business economy to secure now much more land than this sum will buy, and if the amount recommended were doubled, the Board could now secure valuable property at more reasonable terms than at a later date, when its purchase becomes a necessary condition of university growth. Wiser plans also could be made for the future. The Board, however, hesitates to recommend a larger sum for fear of imperiling other more pressing needs

The sum appropriated at the session following was \$25,000. This money was expended chiefly in securing the balance of block 97, now occupied by the Armory and Athletic Pavilion, the Military Field, and the men's tennis courts, a valuable acquisition, secured at reasonable cost, which would now probably cost two or three times what was then paid.

In 1905, \$50,000 was again asked, but only \$24,000 appropriated for the specific purchase of the Unitarian Church property, and the old second ward school grounds east of the hospitals, all of which property is now occupied for University purposes.

At the last session, the Board asked for \$75,000 for land, accompanying the request with some cogent reasons why liberality in this regard would prove to be economical. But again, amidst the multitude of needs, the Assembly found it practical to vote only \$25,000, enough to secure the ground for the new Law Building, while other property on either side which the University must

have in the near future, some of it now needed, is steadily increasing in value.

Even now if \$75,000 could be placed at the disposal of the Board for land purchase during the next two years, it is believed that a most satisfactory accounting could be made of its expenditure.

This extension of the campus is one of the University's primary needs, which might well command more personal knowledge on the part of the General Assembly. Possibly if a committee from the legislature could make a personal inspection of the present situation, its report might aid in a right determination regarding necessary additions to the University campus.

A WOMAN'S BUILDING.

Two years ago in this report we called attention to the large proportion of women students in the University. There were then 540 women out of a total of 1,875 students,—something like 29 per cent. Last year out of a total of 2,300 students, 799, or about 35 per cent, were women. Two years ago we asked for an appropriation for a Woman's Building that should help us care for our girls in a suitable way; this year we repeat the request. Then a Woman's Building was a need; now it is an urgent necessity.

We are asking for \$150,000 for a Woman's Building, equipment, and land, which shall be a genuine social headquarteres for all the women of the University; which shall provide dormitory accommodations for a large number; and which shall include a Commons that shall be large enough to board many more than the building will lodge. Such a building will, by example, raise the standards of rooming and boarding houses; will enable us to establish certain social standards for the lack of which the University is now often criticised; and will add to our numbers many who are now going outside the State to schools where such accommodations as we ask for are already provided. The universities in every state on our borders now have some such buildings. Iowa and Kansas alone in all the middle west are without such buildings.

We are compelled to ask a special appropriation for a Woman's Building. It was not included in the list of buildings presented to the General Assembly in securing the millage tax, which is insufficient for buildings immediately needed. Furthermore, the Woman's Building is not purely an educational building, and fortunately, from the nature of the case, will be self-sustaining.

STREET PAVING AND WALKS, GRADING AND CARE OF GROUNDS.

Without going into further detail, there are some minor charges which the Regents must meet, including street paving, grading, walks, and care of grounds.

The University ought to be able to do its part of paving adjoining streets, as such improvements are ordered by the city, and only await the University's ability to do its share. Part of the back of the old campus, now gullied and in a disgraceful condition, should be graded at once. Grading is also needed in the court of the new engineering building, etc. The present condition of the river front is unsightly, and the small meadow north of the athletic field is needed for a field for the young ladies' use.

THE UNIVERSITY SUPPORT FUND NO LONGER ADEQUATE.

The expansion of University education in this country in recent years has been little less than marvelous. The rapid growth of wealth, and the increasing demand for higher educational training have made this growth in the eastern universities natural and easy. Western universities have had a more serious struggle to secure funds for the necessary expansion, but most of them are overcoming the difficulties, and receiving adequate support from their constituencies.

The feeling is universal that it is a crucial time in the history of the University. If we can not have support commensurate with our increase in attendance, with a scale of salaries for real university professors comparable with that elsewhere, and if we can not have proper supplies, it will mean that the State will not support a first class university. It will mean its reduction to a collegiate institution competing largely with the colleges of the State.

In order to deal justly with our old professors and to retain the professors and instructors called elsewhere, the President prepared a suggested standard for salaries, something not to be followed literally, but a standard in the background, that would make clear to the professors that the Regents proceed rationally, and something that will keep peace in the family. Not less than five professors are staying with us today through their faith in Iowa and the University ideals here, at a sacrifice of \$1,000 a year offered in other places within 12 months. In like manner, a score or more of men are staying with us at a loss of from \$100 to \$500 apiece We can not continue to impose upon their good nature if the

legislature causes them to lose faith in the purpose of Iowa to sustain a real university. We have also lost more than a score of men, many of them instructors, that had just come to a point of the greatest value, who have accepted calls elsewhere at increased salaries.

It is notorious that the Association of Collegiate Alumnae is reported to have denied recognition of our alumnae and of the University on account of the low professorial salaries. Further lack of recognition and exclusion of the University from national organizations will be likely to follow unless the salaries are increased. This would not only mean dire loss to the University but it would actually damage the credit of the State of Iowa.

The second great reason for an addition to the annual support fund is the imperative need to increase the instructors to meet the new sections required by the increase in students. Several departments having reached the limit they could accommodate, refused to register students for their work. This is not just to the tax-payers whose children are patronizing the University and demand the work.

The increase in salaries and the number of instructors is a paramount duty for the further development of the Graduate College. We are not asking as they did in Illinois a special appropriation of \$50,000 for the Graduate College, but we must have professors of the highest type, able to give graduate and research work and to publish; therefore we must have sufficient salaries and we must have enough instructors to give opportunity to these professors to do research work with the graduate students in accordance with the methods of graduate colleges. The Graduate College has shown a great increase (attendance now 247), and is now the largest of any of the graduate colleges of the state universities excepting Wisconsin. The legislative committee of the last General Assembly commended the work of this college and called for the fostering of it.

IOWA ALUMNUS-MARCH, 1908.

SALARIES. In our era of rapid expansion, we must remember that the most important part of a university is the men who occupy its chairs. The University of Iowa owes the greater part of its prestige to the fact that her faculties have included and still include some of the leading educators of the country—men who are not only great scholars but whose influence on students is strong and wholesome. We have set a high standard for our faculties. Are the inducements we offer commensurate? Are they such as other institutions of learning hold out? For the sake

of comparison the following is quoted from the Alumni Quarterly of the University of Illinois:

"Though it may be said with some truth that the salaries of intructors at the University (of Illinois) are lower than at almost any other institution of the same rank and size in the country, it is also true that there has been a marked increase within the last few years. It is not so many years ago that the highest paid professor in the institution received only \$2,000.00, and until within the last five or six years no one received more than \$2,500.00. Now there are several men who receive from \$4,000.00 to \$5,000.00, and twenty-five who draw a salary of from \$3,000.00 to \$3,500.00. The tendency seems to be gradually to bring up the salaries all along the line."

Now for the comparisons: While Illinois has "twenty-five" who draw a salary of from \$3,000.00 to \$3,500.00, Iowa has three. Is it necessary to say more? Yes, it is. Although the comparison reveals a deplorable situation, it does not locate the responsibility or suggest the remedy. This is a plain business proposition which alumni should go to the bottom of and without delay should see that it is made right. In the first place, we should remember that we can in no way blame the Regents. The amount at their disposal is wholly inadequate for what they are expected to do. Every dollar is made to go as far as it will, and the great marvel is they have succeeded in keeping together the superior instructional staff we now have. For the lack of funds it would seem that the legislature is directly responsible; but in a great degree, though less directly, are we alumni responsible. The legislature is ordinarily desirous of carrying out the will of the people. If we alumni do not make our wants known, we can not hope to have them satisfied.

There are two classes of men who especially deserve better pay. First, there are men on our faculties who have been offered a substantial advance in salary by other institutions but whose loyalty is such that they remain with us. These are the kind of men who make a great university. Should they be penalized for their loyalty? It is only justice that they should be paid as they would be, and as inferior men are paid in other institutions. The other class of men referred to are those whom we can not keep without meeting the salaries they are able to command elsewhere. Loyalty to our University holds some good men. But loyalty to an institution comes only after long association and, until it is developed, we are confronted with a plain business proposition. The strong man will not cast his lot with us unless we can give him some such salary as men of his caliber obtain elsewhere.

In the law school alone, we have lost in recent years, three men who are prominent in other law schools. It is no reflection on those who filled their places to condemn a policy which allowed these men to go. These men were developed at Iowa but when their power became apparent, they were taken from us by schools which could pay better salaries. Each of them left with a kind feeling for Iowa. They would gladly have remained if we could have offered them something near the salary they receive elsewhere.

REPORT OF THE BOARD OF REGENTS

27

The Regents, in their biennial reports from 1901 to 1906 asked for and received the following amounts:

1901 asked for \$255,000 and received \$215,000.

1903 asked for \$305,000 and received \$208,000.

1905 asked for \$309,000 and received \$149,000.

1906 asked for \$443,000 and received \$174,000.

During all these recent years the demands came faster than the funds. The Regents all the time believed that salaries ought to be raised, at least in certain cases, and that the University was suffering in the annual loss of some good man, and in the injustice done to others who remained.

MILLAGE TAX FOR SUPPORT.

Past experience in Iowa and elsewhere seems to demonstrate that the most feasible method, if not the only adequate method, of enabling a western university to keep in line with the demands of the time is to place the larger part of its income in the form of a millage tax, as is done in most of the universities named. There are certain annual fixed charges necessary for maintainance and upkeep that must be met before any provision can be made for either adjustment of salaries, care of additional students, or improvements of any kind.

They include the following needs:

Repair and condingent fund for upkeep of buildings, libraries, periodicals and binding, cost of fuel and firing, janitor service and superintendence, catalogues, postage and printing.

These are perpetual needs that will not diminish, but, on the contrary, are sure to increase.

An additional one-fifth mill tax would provide for most of these necessary fixed charges, and relieve the income of a burden which it can no longer carry.

Further provision should be made, also, for land purchase and the equipment of rooms and laboratories and for instructional force to care for not less than five hundred additional students during the next two years.

More satisfactory results to all concerned would doubtless be secured by placing the entire support of the state educational institutions on the basis of a millage tax, where all the other public schools have been from the beginning. The Board would join heartily in the adoption of such a measure, believing that both efficiency and economy would result from such change.

Respectfully submitted,

REPORT OF THE PRESIDENT

THE STATE UNIVERSITY OF IOWA.

IOWA CITY.

June 16, 1908.

To the Honorable Board of Regents:

GENTLEMEN,—I have the honor to present herewith my ninth annual report for the year 1907-1908, and submit the reports of the heads of the departments of administration and instruction, as a part thereof.

GREATER UNIVERSITY.

In the annals of the University this will be known as the year of the Greater University movement, and in every respect is the greatest year up to this time in the history of the University. The students in mass meeting resolved upon the appointment of a Greater University committee consisting of seven students, three members of the faculties. and two alumni. This committee, meeting weekly, has discussed and devised ways and means not only for the promotion of the interests of the University without, but also within. The County Club movement of two years ago has been carried forward. The students in the holidays gathered the alumni in their various counties and perfected organizations in sixty-seven counties of the state. Within the University, the agitation for a woman's building, and co-operation in this with the woman's clubs in the state, has been carried forward. The need for an Iowa Union, or men's headquarters, to promote the moral, social and common democratic life of the University, has been brought out. Many student affairs, like the Northern Oratorical League, the Forensic League, the weekly assemblies, and Senior Day, have been encouraged, with the motto "Always for Iowa."

With an enthusiasm born of their awakening to the excellent university they have, the students, faculties and alumni are being united in the pursuit of the highest University ideals.

ATTENDANCE.

For the fourth year in succession the University has enjoyed the largest attendance in its history, having increased from 2108 to 2315 exclusive of duplicates. The distribution among the colleges is also most promising for the future, the senior college, Liberal Arts, having risen to 1082 from 970, thus ensuring the liberalizing element in the center of the professional colleges. From the purely university point of view, there is great significance in the increase in the Graduate College from 168 to 247. The visiting committee from the legislature rightly observed the sound policy of the rapid development of this college. The College of Applied Science, with its emphasis upon individual and advanced instruction in all departments of engineering continues to increase steadily. The Law College, with advanced standards has made an upward turn also.

	1906-1907	1907-1908
Liberal Arts	970	1082
Law	192	213
Medicine	275	266
Nurses Training School	33	42
Homeo. Medicine	44	43
Nurses Training School	14	15
Dentistry	200	181
Pharmacy	49	54
Graduate College	168	247
Summer School for Library Training	18	23
Applied Science	230	249
Music	73	97
	2266	2512
Duplcates	158	197
	2108	2315

SUMMER SESSION.

The summer session at the University, containing graduate and regular students, continues to prosper, and is resorted to by many of the best school men and teachers of the state. A longer term is demanded.

BUILDINGS.

The year will ever be remarkable in the building era of the University on account of the opening of four new buildings; the Hall of Natural Science, with unsurpassed laboratories; the East Wing of the University Hospital; the Steam Engineering Laboratory; and the Plant House. The building operations are continuing in the rapid erection of the extension to the College of Applied Science, the building of the President's House, and the acceptance of plans for the College of Law.

The fire proof Hall of Natural Science, on which with equipment there has been expended \$313,872.28, is one of the most modern and best in the appointment of its halls for the museums and laboratories. The General Library, with its new reading room, temporarily in this building, and the Auditorium, have given much needed relief, and an impetus only second to that given the natural sciences to the literary side of the institution.

ORGANIZATIONS.

The Greater University has also shown itself in the development of new University organizations. The School of Education which has grown out of the department of education and opened this year, has already fully justified itself; not less than sixty-eight certificates from the School of Education have been earned. Sixty-five graduate students enrolled in this school out of a total attendance of 275. The Director of the school has been justly recognized by his appointment as chairman of the Commission for the Revision of the School Laws of the State. The Museum of Art and Archæology has been organized. The Forensic League, embracing the Debating League so long ably maintained by the Zetagathian and Irving Societies, and the activities of the other literary and forensic societies, has been put upon a genuine university basis. It has been incorporated and enthusiastically supported by students, faculty and alumni. In conjunction with the chair of Public Speaking, the Iowa High School Debating League, which has grown steadily, has enrolled twenty-six leading schools, and many others use the material prepared by the University. With an organization analogous to the Athletic Association, the Music League has been formed which is full of promise for guid-

REPORT OF THE PRESIDENT

ing the rapidly increasing activities of the groups of students interested in music.

ALUMNI BUREAU.

The Alumni Bureau, with a secretary on full time, seems almost like a new organization in its efficiency. The News Letter has been revived, and the "Alumnus" well maintained.

THE COLLEGES.

Liberal Arts.—Dean Weld has already proved himself a worthy successor of Dean Currier. By the action of the faculty large powers of administration have been committed to him. The results have been quiet and effective. There have been but three cases of discipline. Voluntarily, under the inspiration of the work of a committee of the preceding year, the freshmen and sophomores substituted a push ball contest for the old-time "scrap," and with great satisfaction to all concerned. Indeed, it may be said that the order of the entire university has been most excellent.

Student Advisers.-The system of student advisers which originated in 1905, has been most happily developed. The committee of student advisers, with Professor Nutting at the head, have acted under the following regulations: The list of all freshmen and sophomores is provided by the registrar as soon as possible after the opening of the college year; the committee on student advisers appoints a list of about thirty advisers; these advisers are divided into five approximately equal groups with a member of the committee at the head of each. Each freshman, sophomore and special student is assigned to an adviser. The effort is to have each student have for his adviser one of his own instructors. The students are assured that the purpose is to establish a purely friendly relation and not a species of espionage. A system of weekly reports has been adopted, whereby the adviser is at once informed of any lapse on the part of a student. Toward the close of the last college year a letter was sent to each high school principal explaining the system and its objects, requesting the aid of the principals in the matter of information regarding students about to enter the University, and promising to keep the principal informed as to the situation in regard to any of his students.

The response to this letter was not very general. Professor Nutting reports the results of the system:

- 1st. The faculty is called upon to devote much less time than formerly to the discussion of student delinquencies.
- 2nd. The scholastic and moral career of students is much more closely followed than formerly.
- 3rd. The realization of the fact that his adviser is promptly informed of any slips has a marked effect in keeping the student alive to the situation and deterring him from back-sliding.
- 4th. It can confidently be asserted that a number of students are each year saved from failure and helped to success, who would otherwise in all probability fall by the way.
- 5th. This well organized method of looking after students has assured parents, and tended to allay the apprehension raised by the enemies of the University regarding the "moral atmosphere" surrounding students.
- 6th. The advisers have in many instances received real inspiration from the contact with the inner lives of students. This real contact should be the main purpose of each adviser, as it is the key-note to the whole system.

College of Law.—This year the requirement for admission was advanced one entire year, from three to four years of a high school course. It was feared this would seriously diminish attendance. It is therefore gratifying to report, says the dean, that the college shows an increase of 10 5-6 per cent. The college enjoyed the national meeting of the Phi Delta Phi, the leading law fraternity of the United States, which was held this year at Iowa City on the invitation of our local chapter. It was the largest and best convention the fraternity had ever known.

College of Medicine.—The College of Medicine, constantly advancing its standards, is practically stationary in attendance. With the best schools of the country the college will still further advance its standards to one year in liberal arts in 1909, two years in 1910. The falling in with this plan by the best schools in the country confirms the wisdom of the combined six years' Liberal Arts and Medical course adopted at this University some years since.

College of Homeopathic Medicine.—The College of Homeopathic Medicine last year advanced its standard to that of the other College of Medicine, and still maintains its attendance.

The nurses training schools have been recognized under the new law.

College of Dentistry.—The steady attendance at this college with better prepared students at the reasonable tuition of \$50 in place of the tuition of \$150 required by the Association of Dental Faculties dominated by schools with commercial interests, shows that the State of Iowa has won in its fight for the people and the profession in behalf of educational standards as apart from pecuniary ones. The Alumni Clinic and the societies organized in the state demonstrate that the college is fulfilling its purposes in the service of the entire profession. The college reports the clinical attendance about 14,000. Further public service is being made by making record of defective teeth in the children of the public schools, carried on by Professor Rogers. It is hoped to extend this matter of oral hygiene throughout the state.

College of Pharmacy.—The so-called Out Clinic at the hospital has been useful in supplying practical work to the seniors. They have been required, under careful personal supervision, to help in the dispensing at the University Hospital. The work of the dispensing room at this hospital has been doubled during the past year. The standards of this college are being steadily raised as fast as the action of the Conference of Pharmaceutical Faculties of the American Pharmaceutical Association will permit. This college, as well as the colleges of medicine, has been placed in Class 1 of the New York Educational Department.

Graduate College.—The Graduate College has had the largest percentage of increase of attendance of any of the colleges. During the first semester it was administered by Dr. Macbride while he was considering whether or not he would add the deanship to his many duties. Upon his declination Dr. Seashore succeeded to the deanship.

Among the noticeable improvements in the standards of the college are the new requirements for residence of candidates for degrees; the restrictions placed upon too intensive work under one person; the changes in the language requirements, and some changes in the basis for the awarding of scholarships and fellowships.

College of Applied Science.—The College of Applied Science, according to the report of the dean, has justified its policy of establishing broad courses and securing good men first and machinery afterward. He says, "it has resulted in giving us as strong courses in engineering as are offered anywhere in the country, and in some departments, notably in the department of structural engineering, I believe we excel." The dean well sets out the aim of the college "not to secure the largest attendance nor the largest engineering laboratories for original research, though we shall welcome both of these when the time shall arrive. It is our aim to have it said by the employers of young graduates that the best trained men they get are from Iowa. To this end, it is our purpose to secure teachers of high grade who must be paid adequate salaries, a laboratory equipment ample for the illustration of principles, but no more, and a spirit of enthusiasm and independence on the part of the student body."

School of Music.—The affiliated School of Music has shown a large percentage of increase in attendance, and the work has given satisfaction to the patrons. It is more clearly demonstrated than ever that there is a demand in due time for making this a regular department of the University.

THE LIBRARIES.

The librarian reports concerning the General library, that during the year 5176 volumes, exclusive of the Ranney donation, have been added—of which, 3679 are gifts or exchanges. In spite of the small appropriation the increase is the largest since 1899-1900. This is due to the effort to obtain by gift or exchange, society and state publications. The great task of removing the library to its new quarters was well done under the supervision of the librarian and his forces. He is now happy in the report that the new reading room is one of the finest of any library in the West. Its use has greatly increased. Despite this fact, the librarian makes a strong plea for a new library building. There are at present nineteen departmental libraries scattered about the campus—a strong argument for a library building that should make these departmental libraries easily available

REPORT OF THE PRESIDENT

for general library purposes and for those engaged in research in cognate departments.

RANNEY MEMORIAL LIBRARY.

In July, 1907, Mrs. Martha W. Ranney of Iowa City, died, leaving to the University her library of about 3,000 volumes in memory of her "lamented and noble husband, Dr. Mark Ranney," at one time a lecturer in the College of Medicine. The collection will be known as the "Mark Ranney Memorial Library," and is largely composed of limited editions of standard works of history and literature in beautiful bindings. This library has not yet formally become the property of the University, and therefore, a full account of the collection is out of place.

BOOK EXHIBITS.

The librarian has inaugurated a plan of giving a series of book exhibits, say, two or three a year, to members of the faculty.

HIGH SCHOOL INSPECTION.

The inspector has visited ninety-one high schools personally, and seven high schools have been visited by members of the faculty. Eight schools have been advanced to the fully accredited list of the University, and six have been given recognition as partially accredited schools. Four have been dropped. There are in Iowa now 184 fully accredited schools, and twenty-two fully accredited private or denominational schools. There are forty-six partially accredited schools, and one partially accredited denominational academy. Outside the state, there are thirteen fully accredited schools. The work outside the state, however, is now left to the North Central Association. Cornell College, Drake University, Iowa College and Simpson College have co-operated to some extent in the work of inspection during the year. It is believed that such co-operation is desirable and that it should be the policy of the University to encourage other institutions to assist in the work of inspection under the direction of the inspector. The influence of the North Central Association is distinctly seen throughout the state. Last year there were in Iowa thirty schools accredited by

the association. This year the list has been increased to forty-four.

The inspector reports that on the whole, this has been professionally the most profitable year devoted to this work by the present inspector. He has not sought to increase the accredited list rapidly, but has urged schools to meet fully the required standards before applying formally for admission.

SCHOOL OF POLITICAL AND SOCIAL SCIENCE.

The director reports an attendance in the first semester of 856; second semester of 816, as over against 367 and 526 five years ago.

UNIVERSITY EXTENSION.

The director of University of Extension points out some of the changes in the form of University Extension, from the former lecture courses. The high schools of the state have made constant demand for speakers for the high school graduating exercises. He proposes that a conference under the Religious Education committee should be called at Iowa City, that it might help our spiritual life and be a great stimulus to the moral and intellectual forces of the commonwealth. Incidentally, bad impressions now prevalent in some quarters would be counteracted.

PUBLICATIONS.

One of the surest signs distinguishing a university from a college, as a place of research, is its publications. Eightyseven books and articles have been reported issued by twenty-nine different members of the staff of instruction.

ATHLETICS.

The Board in control of Athletics for the second year reports a surplus in the treasury. Business methods have been carried out. The spirit in connection with athletics has been an excellent one, and a greater number of students have been interested.

MILITARY DEPARTMENT.

In the military department there has been an advance from the battalion to the regimental organization. A second innovation has been the change in target practice from service ammunition to gallery practice, with abundant ammunition furnished by the government. The result has been that about seventy-five men have fired voluntarily, and twelve have qualified as Expert Riflemen under the rules governing the National Guard. The practice march to Mid-River Park and the encampment there from May 23rd to 26th, was another distinguishing feature of the success of this department.

CARE FOR YOUNG WOMEN.

The dean of women was successful in extending the number of approved homes for young women. The University was able to put at her service two buildings that came to it, one of which was known as Ranney Hall.

SOCIAL REGULATIONS.

The social regulations adopted last year by the senate after conference with representatives of the students, concerning the hours of closing parties and calling hours, have been fairly well kept, and an excellent sentiment has been shown by the students. Warranted by a tacit demand made by many of the students, the senate has just adopted a further regulation limiting the evenings that are to be given to formal parties to the last two nights of the week.

The steady increase of interest in good manners and morals upon the part of the student body, together with the uniform administration of the standards of admission, scholarship and graduation, are indicative of the presence of the highest university ideals in the Greater University.

The prosperity of the University has been the source of its distress. The last legislature in curtailing the increase in the support and equipment fund which was asked by the regents, have caused the University to feel a keener sense of poverty than ever before in its existence. Only the loyalty and devotion of an underpaid staff of instruction, many of whom are sacrificing hundreds of dollars in resisting calls elsewhere, and the enthusiasm of the students, save the University from disaster in the moment of its greatest success.

GIFTS.

Mrs. Martha W. Ranney, by the gift of her entire estate as well as the gift of the Mark Ranney Memorial Library, will be doubtless the largest benefactor up to this time of the University. By her bequest, the foundation for proper instruction in the fine arts will be laid.

Various valuable collections have been given—geological specimens by Professor Farnsworth, a member of our first medical faculty; the Morgan Collection of Plants and Fungi, by Mrs. Laura Vail Morgan of Ohio; the Kuntze collection of minerals, and the J. V. Henley collection.

The conclusion of Mr. Andrew Carnegie not to exclude state universities where the regents, governors and legislatures approve, from the benefits of the Carnegie Foundation for the Advancement of Teaching in the form of retiring allowances, will give an opportunity to state universities to compete with the best institutions in retaining the best talent in the staff of instruction.

These all are signs that private munificence will more and more supplement the bounty of the state, and find its surest and most useful monument in perpetuating the people's institutions.

Respectfully submitted, GEORGE E. MAC LEAN.

TREASURER'S REPORT.

Iowa City, Iowa, August 28, 1908.

To the Honorable Board of Regents of the State University of Iowa.

GENTLEMEN,—I have the honor to submit herewith a statement of the Income Receipts and Disbursements of this office for the biennial period commencing July 1, 1906 and ending June 30, 1908.

I enclude in this statement the transfers of funds ordered by you.

I also submit herewith a statement of assets of the State University of Iowa, June 30, 1908.

I have not included in this statement the University buildings and other properties located in Iowa City, Iowa.

BALANCES JULY 1, 1906.

October 1, 1908.

To the President and the Board of Regents of the State University of Iowa

I have the honor to submit to you herewith my report for the academic years 1906-1907 and 190-1908. For more detailed statements concerning the enrollment in the several colleges of the University with the names of the students enrolled during the two years mentioned I refer you to the University calenders for these years.

Respectfully submitted, EDWARD C. BARRETT, Registrar.

SUMMARY OF REGISTRATION 1906-1907.

Attendance 1906-1907 by Colleges	Men	Women	Total
College of Liberal Arts*	473	497	970
The Graduate College*	94	74	168
The Summer School for Library training	0	18	18
The College of Applied Science	230	0	230
The College of Law	192	0	102
The College of Medicine	260	15	279
The training School for Nurses	0	33	33
