TENTH BIENNIAL REPORT

OF THE

TRUSTEES

OF THE

Iowa Industrial School,

EMBRACING REPORTS FROM THE

SUPERINTENDENT OF THE BOYS' DEPARTMENT AT ELDORA, THE
 SUPERINTENDENT OF THE GIRLS' DEPARTMENT
 AT MITCHELLVILLE, AND ALSO THE
 TREASURER OF THE BOARD,

TO THE

GOVERNOR OF THE STATE OF IOWA,

FOR THE

FISCAL TERM ENDING JUNE 30, 1887.

PRINTED BY ORDER OF THE GENERAL ASSEMBLY.

DES MOINES:

GEO. E. ROBERTS, STATE PRINTER,
 1887.

REPORT OF TRUSTEES.

To his Excellency, WILLIAM LARRABEE, Governor of Iowa, and Members of General Assembly:

IN presenting this the Tenth Biennial Report of the Iowa Industrial Schools, the Trustees express their gratitude to an ever kind Providence, who has given us wise rulers and good laws, together with the many blessings by which we are surrounded, and with most gracious thanks to the Governor and General Assembly for the care which they have given this Institution, we respectfully submit this report.

This School started twenty years ago, in an very humble way, with many hopes, and more prayers for its future prosperity, has at last gained a footing and stands well as one of the permanent institutions of our noble State. It is one center, from which strong currents for good are constantly flowing, and cannot fail to bring honor and happiness to many homes throughout the State.

THE OBJECT OF THE SCHOOL.

The story is old, but ever new. Any thing that is meant for the bettering and uplifting of our fellow-men should never grow so old that we lose our interest in it. And in these children, these waifs of the world, who are tossed about by the waves of poverty, the heritage of evil, the misfortune of orphanage, and an ever continued train of circumstances; these we are likely to have to think of, to do for, and to plan for so long as the world does last.

What to do with these children has been a grave question in the minds of our thoughtful citizens.

Many are small, of tender years and whose errors were hardly of their own, but the sin of omission on the part of others. To send these to jail was not only cruel, but would in most cases be ruinous to the child. But they could not go uncared for or unpunished, be-

cause the effect would be to raise and foster a class of the most evil characters, and we have in addition to our own native evil-doers to add the rapid influx of foreigners and this was something that could not be regarded with indifference.

To send offenders to prison could be done with little trouble and expense. But what was the effect? To improve them? Were they better for the punishment they had suffered? Nay, on the contrary if there was a grain of self-respect left, any delicacy of feeling 'twould all have been crushed out by the unsympathetic class of people with them. No kind voice to speak words of counsel or advise.

So wise men decided that a school of a reformatory nature should be started, where these youthful offenders might have some chance at home life, family life, with the personal attention of men and women who have given themselves to the work.

The School does not aim to give a high or classical education, but enough to fit them to fill useful positions as virtuous, upright members of society. There is nothing of a party or sectarian character in its management.

We think the establishment of such an institution, is characteristic of an advanced Christian civilization. What can be more Christ-like than efforts made to "rescue the perishing."

What would become of these children, if left wholly to themselves?

Can you not imagine many a tragedy, many a pathetic tale of want and suffering, and wickedness and death? Ah, what deaths, no light ahead for many of them, only the darkness and bitterness of eternal death. The State should care for them, not only on the grounds of benevolence, but in self-defense. It is much more desirable and far less costly to prevent great evil than to punish it after it is committed.

When we realize that from seventy to seventy-five per cent of all who have been committed to the care of the Institution have been returned to society reformed in purpose and principle, may we not feel how blessed has been the work and expenditure in their behalf?

THE INMATES.

It must be remembered that it is only those whom society refuses to recognize that are committed to this School. Not that they are all *criminals*, for there are very few, but are *all* sent because of disobedience of the law. The inmates are not alone the children of

paupers and of the lower classes of the people, but many are the children of educated, respectable parents, who have in some way failed in governing power, consequently their children are rebellious at home and the same at school. But the scholars are largely of a truant, incorrigible class, vicious, careless of good and who know little of and care less for study. That subjection to anything but superior strength is unknown to any or most of them is well known. So this course of training in manners, morals and education is not readily submitted to at first. But through kindness and patience, aye, patience which is twin sister to charity, and which worketh long and is kind, and beareth much, the most obstinate and incorrigible are soon over. There are fully one-half of the boys who come into the School that cannot read or write. But through the compulsory system of attention to studies for the one-half of each day the year round, the teachers have the pleasure of seeing most of their pupils attain an education that will compare favorably with that obtained from our common graded schools.

We would like to impress upon the minds of the friends of this Institution the great work that is going forward toward the wiping out of the illiteracy of Iowa. How proud we ought to be that Iowa leads in educational matters; the illiteracy of the State being two and four-tenths. With the generous aid which we have always had, and will still hope for in the future, this school will, in its quiet way, strive to reduce the per cent still more.

THE TEACHERS.

The schools are under the care of competent and faithful teachers, earnestly devoted to the interests of their pupils. They labor with zeal and unending patience, vigilance and tact. And, happily for all concerned, with gratifying success. The task though is a difficult one. The control of the school is beautiful. Good discipline has been maintained by the mildest means possible.

It has been the effort of all to render it as pleasant a home as could be, and to treat the inmates not as criminals deserving condemnation and punishment for their offenses, but as boys needing wholesome restraint and the tender care of parents. The boys are cheerful and generally industrious, and quite contented. The number who have escaped, and who have attempted to do so, is small from among so many, and when it is known that this is not a prison with high walls and bolted doors, and barred gates, but that chance for escape

is open at all times through the waking hours, we must conclude that the disposition is lacking. The effect of kindness and their appreciation of it is shown in many ways, especially through the letters received by the Superintendent and wife containing so many thanks for the benefit they have received. They are helped so far on their way to be better men, that most of them grasp the fact that it is better to live good lives than evil ones, though the struggle to do so may be more difficult than to live the opposite. The discipline of several State prisons has been modified by reason of the success of the reformatory character of the industrial schools, and still better, several prisons have been converted into reformatories. This system is growing in favor with prison authorities and students in social science, both in this and other countries.

EMPLOYMENT OF INMATES.

The boys are divided into two classes, of which one is in the school-room in the forenoon of each day, while the other is at work on the farm, in the shops, the kitchen, bakery, laundry or elsewhere as required. In the afternoon this class goes into school and the others take their place at work. So each inmate has a half day's schooling of four hours in length throughout the year, except in seed time and during the harvest. In this way they gain through steady attendance more than in our public schools. They, with the assistance of the employes, do all of the work of the Institution, and learn to do it well. Many would prefer different work from that assigned them, as they would prefer to gain knowledge in certain directions, so as to be enabled to gain work as soon as released. But if they are not all learning trades, they *are* learning good, strong lessons in discipline and patience, which will be of incalculable value to them in the future.

DISCHARGED INMATES.

For the same reason that many are sent to this School (that they have had no home influence to make them else than they are), so does it make thoughtful persons tremble when these boys receive their discharge, knowing that they go back to either the same home or out into the world, having no place which they could call home. They may have been good and faithful, and, under the kind, watchful care which has been over them constantly, have improved so that one has

every reason to believe that they are good. But, without kindly, strong hands stretched out to help, some are tempted to drift back to their former habits. We would say that progress in the school of itself, would be an insufficient and unsafe gauge of fitness for the release of the inmate; but, proficiency in their studies, sustained by a standard attainment in work and conduct, affords evidence in most cases of mental and moral strength (especially if the boy was quite young when committed) which justifies the confidence put in him, when he has learned to bring himself into subjection to the influences which are likely (we would that we could say *which are*) to govern the whole of his after life. Could suitable homes be obtained for the discharged scholars, there are few that would be lost to a better life.

Nothing could be more discouraging or perplexing to a young man than to be placed among strangers without means, and with no recommendations and no prospect of work. And yet this often occurs. The teachers and Trustees have, as far as possible, tried to prevent such failures, by obtaining places for each before being released, but it is no easy task to accomplish.

INDUSTRIAL TRAINING.

We cannot urge too earnestly that an interesting industry is conducive to moral culture. Boys who are absorbed in industrious achievements are kept from much mischief. *Labor is a mighty factor* in their improvement. Beginning in the habit-forming time of life, it becomes a part of them.

Is it not a fact, that had most of the inmates a given amount of work to do, that they would have *missed* being inmates of our Institutions. They would not have had time to give offense, for which reason they were sent here. The smaller ones know no better, and the older ones rush into vice impelled by the sheer *ennui* of idleness.

It is an evidence of great progress in this department that the boys are most anxious to learn, and proof is given that they can, in that a few have become quite skilled in their branch of trade or work, and able to earn a living. But the "few" might become "many," were the opportunity given them, and a saving in many ways, in the manufacture and repair of articles in daily use; besides, the production of articles which would bring a revenue to the School. They are making all use that is possible out of their boot and shoe shop,

their broom manufactory, the tin shop and blacksmithing. But there are more branches needed and better accommodation for work than now. So we make a point of urging, that *if work be a saving factor that work be given them*. Is it not true, that when a girl or boy once enters an art they generally remain true to it and make the most of it? Its practice gives a certain sense of superiority and of self-reliance, which goes far to strengthen morals in the truest sense of the word.

MORAL AND RELIGIOUS

instruction form a prominent part of the lessons taught here. Worship is held in the family buildings each evening and morning. No pains is spared to impress upon the minds of the boys the great importance of a virtuous, godly life. In the Sabbath school they use the International Lessons, the same as in every school in the country. The scholars are much interested, and some have gained a wonderful knowledge of the bible. The ministers of the several churches of Eldora have served in turn as chaplain, so the boys have a sermon every Sabbath but one, in the month. That one, is devoted to the writing of letters, and all boys who have any one to write to may do it upon this day.

THE HEALTH OF THE SCHOOL

is remarkable, considering the number of boys gathered from all sources and conditions of life. Among so many, disease would be expected. But strict regularity, in hours of rising and retiring, of exercise and rest, attention to food and the bath, has kept the School in good health. It would seem as if no institution in the State could show a better record.

THE SCHOOL LIBRARY

is good, very good, what there is of it, but among the 350 boys there is a large proportion of whom, after they have once had their taste directed in that channel are hungry to read. So it would seem as if there is no doubt as to the advisability of putting a bountiful supply of good books upon the shelves of the library. To place before these young minds the works of the best writers, is an education in its self,

1887.]

and a higher grade of thought can be received in this way than through any other channel.

"Dreams and books are each a world,
And books we know are a substantial world, both good and pure."

COMPENSATION OF TRUSTEES.

It is a fact perhaps not generally understood, that the Trustees receive no pay whatever as officers. There is no disposition to complain, for as Trustees it is a work of love, of Christian duty, each doing his or her share with pleasure, hoping that the cause in which they labor may prosper, and in that, they have their reward. But as to the Treasurer of the Board, a man who has given thirteen of the best years of his life, and serving faithfully in all things, and who has been obliged to give bonds for the sum of \$25,000, and to receive and disburse all sums appropriated from time to time, for the use of the Institution, and all without one cent of recompense for time or labor, this, we as Trustees think an unreasonable demand from the State of Iowa, and they again ask that an allowance be made the Treasurer of such an amount as is *right and just*.

APPROPRIATIONS ASKED FOR FOR THE BOYS' DEPARTMENT.

To finish and furnish family building.....	\$ 10,000
To finish and furnish chapel building	8,000
For water tower, water mains, etc.....	7,000
For electric light for buildings and grounds.....	5,000
For contingent and repair fund	4,000
For garden house and cellar.....	1,200
For green house.....	700
For new tubes and repair on boilers	500
For chaplain fund	500
For library.....	350
For new steam pump	
Total	\$ 37,750

The appropriations asked for this department seem to us to be very necessary in order that it may do for its increasing population what is expected of it.

The amounts in each case have been carefully estimated and placed at the minimum at which the desired improvements can be made.

The family building is a necessity, as we have now enough boys to fill it, who should be removed from over-crowded families. The de-

sign of the management and the plan of the buildings only arrange for fifty in one family. But even with the use of the hospital building as a family building (which, with the good state of health in the School is not needed entirely as a hospital), the families contains from sixty to seventy-five boys each.

THE CHAPEL

is also a necessity. The room now occupied as such is too small by half. It is a low-ceiled room, 40 x 40, in their work-shop. Besides being unfit for this purpose, it is a room which is much, *very* much needed for shop purposes.

THE WATER TOWER.

We have now about \$150,000 worth of property, with practically no means of extinguishing a fire should there one break out. Some hand-grenades and Babcock fire extinguishers being the only means of fighting fire, except in one building, where we have a tank in the attic with hose attached. We would strongly urge that there be an appropriation of \$7,000 made with which to erect a tower and lay mains, put in fire plugs and supply the buildings with water. Such a water supply would very materially improve the sanitary condition of the School, in furnishing better facilities for bathing, means for cleansing water closets and sewers, as well as being a protection in case of fire.

ELECTRIC LIGHT.

We think the time has come when the buildings and grounds should be lighted with electricity. With electric lights and a water tower, the chances for a destructive fire would be reduced to a minimum. Twice a day, during six months of the year, the entire number of boys must be marched from the family buildings to the main building, a distance of several hundred yards, in the darkness. They eat both breakfast and supper by lamp light. With electric light in the yard, it could be done more conveniently and safely. We trust this much needed improvement can be made in the near future.

CONTINGENT AND REPAIR FUND.

We think there should be four thousand dollars for repairs the coming two years. Some of the tin roof needs replacing with new

ones. Several floors must be relaid. The ice-house needs to be enlarged. The barn must have extensive repairs. There should be a hog-house built, and an additional cow-shed. The barn, the out-buildings and the wood work of *all* of the buildings should be painted. The appropriations asked for is less than four per cent of the value of the property to be cared for, to say nothing of the hog-house and cow-sheds, which we desire to build new.

THE GARDEN HOUSE AND VEGETABLE CELLAR.

Our garden of 60 acres yields a large supply of vegetables, which it is economy to care for in the best manner possible. Our present cellar is under one of the family buildings, and is much too small, so that many of the products of the garden must be covered up out in the garden during the winter. That portion stored in the cellar under the family building is disagreeable to them, and in our judgment not healthful. We would therefore ask that \$1,200 be given us with which to build a cellar in the ground and one story above ground, in which to keep the winter supply of vegetables and store garden seeds, tools and other things pertaining to the garden.

GREEN HOUSE.

We think a green house would be a profitable addition to our work. Plants for the garden and flowers for lawn decoration could be started early, and sale made of all we would not want for home use. This would make a small green house a source of revenue.

BOILER REPAIRS.

Two of the boilers now in use need new tubes and other repairs of steam heating apparatus which could be done with \$500.00. A new steam pump must be supplied in the near future, as the one in use now is about worn out.

THE CHAPLAIN AND LIBRARY FUND.

The chaplain and library fund needs no explanation as all interested will at once see the need of them. In all of the appropriations, we have asked for *just* what will make the desired improvements and trust that the *full* amount will be allowed, if it is thought best to do the work.

EIGHTH BIENNIAL REPORT OF THE GIRLS' DEPARTMENT, INDUSTRIAL SCHOOL.

This school for girls, if it was at first considered an experiment, cannot with a knowledge of its history and success during the sixteen years of its existence be any longer regarded in that light. Of the 320 girls committed to its charge, a large proportion have been saved from the dangers which threatened them from their surroundings, and the temptations to which they were exposed. Certainly the effects of those to whom have been committed the work of reforming these incorrigible, friendless, neglected, vagrant and viciously inclined girls, has been continued with unflagging zeal and with gratifying success. One who is not familiar with the daily experience of such an institution, can never appreciate the arduous duties, grave responsibility and incessant care and anxiety attendant upon the faithful carrying out of plans for the improvement in manners, morals, physical training, and lastly efficiency in household duties. Sent here from homes most unpromising in which intemperance, poverty and crime reign, these girls require the devotion of earnest and sympathetic hearts to guide them and so lead them out of their old selves into new and better selves; so that a true and prosperous womanhood will be the result. To those who are not conversant with the object and method of conducting this School, it will be hard to realize the good that has been accomplished in rescuing so many from becoming outcasts from society, winning them back to ways of virtue and fitting them for positions of usefulness. It is well, always, to aid in helping the young and the helpless poor, but we should be especially solicitous to put forth every effort to save the daughters of the people from the pit-falls of vice and degradation which are so numerous.

The demand for healthful reformatory establishments is becoming greater every year. May we have room for all that come, if we can but aid in mitigating the sorrows and sufferings of the erring ones and leading them to a higher and better life. Many of the girls who enter here have never realized the blessings of a respectable, comfortable home, and their entrance upon scenes entirely new to them

causes many comments and much wonderment. 'Tis like the revelation of another life entirely. But when the discipline of the school is brought into use it some times causes rebellion. But generally the kind treatment, the pleasant associations, have such effect upon them that ere long there is a marked improvement in speech, manner and thought, and even in face and form. They are no longer doging sin or fleeing from cruel parents, or seeking a night's lodging or a meal, and so the hunted, starved, bold and shrinking look disappears, and they become what God meant they should be; girls, trying their best to make all of themselves they can, with the help of their teachers. There are 115 girls in the School and each has her daily duties.

They are divided into two classes, so that every girl has a half day of four hours in school, while the other attend to the work of the household. They perform all of the work of the Institution, with the help of the manager and employees. Each girl is required to remain three months at one occupation before she changes, so that she may become quite proficient in each branch of work.

The most of them love womanly occupations and accomplishments, and do fine needle work, beautiful fancy work, aside from their plain sewing and their knitting. They can all knit, but the greater share of this work is done by the youngest girls in the School, most of them eight to twelve years of age. It is with these girls as with the boys, had it been possible to have kept hands busy, the need of reformation would not be.

These young girls having taken the first step in vice, linger awhile before taking the second, and then—for want of something to do, or some one who could help them if they only knew how or when, they take another step and are usually rapidly degraded.

We feel that the girls too, ought to have the benefits of some of the mechanical acts so they might be enabled to win their living in other ways than just that of house work. Good artisans are in demand, both men and women. It was thought at one time not long ago that South Kensington and Manchester schools would afford a supply for years, in accordance with the demand, but they have been as a drop in the bucket.

CHAPLAIN'S FUND.

An appeal for an appropriation to this fund has been made before, but has never met with a response, that is, not a visible tangible

response, and while so much is depending upon their spiritual instruction and the influences received by these young girls, most of them being at a tender age when impressions are easily received. We feel as if we must again draw attention to the need, believing that if we ask earnestly and in faith we will receive.

THE LIBRARY.

We would make a strong plea that more books be supplied the girls. There is great thirst among them for good literature. Most of them read eagerly for themselves. But many delight in having their teachers read to them (which they do almost every evening). They understand better, and then their tastes are guided to appreciate many books which if left to themselves they would fail in doing. The library is a nicely arranged room—the book-cases fashioned to hold many books and of varied sizes, and the few books which have been upon the shelves have been read literally into pieces. So now the empty shelves cry for us to “give.”

CONTINGENT AND REPAIR FUND.

That things will wear out and get out of order, and at times and in ways which incline one to be a firm believer in the “total depravity of inanimate things” is known to all.

In our homes it is so, and much more in the school where much use is made of every article, and all parts of buildings, and in fact everything in connection with the School and grounds is in constant use and constant wear. Articles that cost comparatively little and yet add much to the comfort and convenience of all could be purchased or replaced or repaired were there a fund from which to draw. Repairs upon buildings, fences, stables and sheds are necessary, and many needs constantly arising which cannot be foreseen, all of which requires immediate attention, and attention and care requires an appropriation.

NEW FAMILY BUILDING.

That the School is increasing is shown by the need of another family building. In the fall of 1885 a building was finished and furnished, and immediately filled. This was built on the cottage plan, and is admirably arranged for the use and benefit of the girls, both physically and morally. It is the experience of older institutions,

1887.]

that the cottage plan better serves the wants of the inmates than any other plan that has been adopted. The dormitories of old are now regarded as detrimental to health and morals and the individual or cell rooms are being built. All public charities are introducing this system into their new buildings. Each girl then has a place which is her own. She can make as much of it as she will, and they do show their taste and character in the arrangement and keeping of it; books, pictures, flowers, grasses, and the many articles of ornament that girls gather around them, so that some of their rooms are bowers of beauty. In these homes they are associated so closely with their teachers that all of good which is to be obtained can be, and is freely given. Another building such as this, with a few additional conveniences (which were left out of the other for want of means to put them in) is needed, so accommodations for all the pupils may be had without the necessity of over-crowding.

ELECTRIC LIGHT.

To insure safety from fire and to obtain better light, it has been deemed desirable to ask that the Institution be provided with electric light.

PURCHASE OF LAND

was made with money accorded us for that purpose. This gives pasture and hay land, and the desired opportunity for better sanitary improvements.

APPROPRIATIONS ASKED FOR THE BIENNIAL PERIOD, 1888-1890.

New family building	\$ 12,000
Heating the same	1,000
Furnishing same	1,200
Water and sewerage	700
Addition to the cow stable	1,000
Laundry, hospital and water-tower	8,000
Laundry machinery and bath house	1,500
Electric lights	3,500
Repair fund	1,000
Contingent fund	3,000
Team of horses, wagon and harness	400
Furniture and carpets	600
Library and school books	500
Fence and drainage	1,000
Chaplain fund	250
Total	\$ 35,650

NEW SUPERINTENDENT AND MATRON.

By the resignation of Mr. L. D. Lewelling, who served the interests of the School long and well, but who has found other fields for the exercise of his fine ability, a new Superintendent was introduced to the school, Prof. C. C. Cory, of Pella, Iowa, a life-long educator of the youth of the land, and a man who seems fitted in every way for the position he occupies. And if there should be ought that he fails in, his wife who occupies the position of Matron will make good the deficiency. With her gentle ways, her kind heart and interest unending in the welfare of these girls nothing but good can be the result.

THE STATE INDUSTRIAL SCHOOL

is in a most encouraging degree successful and effective too in its work under the present management. Is there no reason why it should not continue so? It is one of the foremost charities of Iowa, and the State is to be congratulated that it is so. Were the workings of the Institution better known to the people generally, we have faith that more interest would be taken in the work and a more generous spirit exhibited toward it. It is a difficult institution to advertise. The failures are generally known, and they do not bring us into favor. The best results of our work are least conspicuous. Those who become successful as good citizens do not publish the fact that they graduated from the industrial school, but carefully avoid any allusion to their connection with it. But the State gets the benefit of their good character as citizens, even if the School does not get its share of the credit.

And thus does the State do its reform work, raise the fallen, protect the weak, and make good citizens out of bad ones. The work of saving these children is broad enough, variable enough, and great enough to invite the interest of any and all who have

"A sigh for humanity's woes."

Trusting that the next General Assembly will appreciate the efforts made in behalf of this School by the Trustees and by former Legislatures, and grant us the appropriations asked for and needed so much, we respectfully submit this report.

MISS MARGARET APPLETON.

TENTH BIENNIAL REPORT
OF THE
SUPERINTENDENT
OF THE
BOYS' DEPARTMENT.

REPORT OF SUPERINTENDENT OF BOYS' DEPARTMENT.

To the Board of Trustees:

I have the honor to present to you the following as the Tenth Biennial Report of the Boys' Department of the Iowa Industrial School:

STATISTICS.

TABLE I.

Whole number of boys committed to the School since its opening, September 21, 1868, to June 30, 1887.....	1,260
Number discharged and otherwise released from the School.....	930
Number remaining in the School June 30, 1887	330

TABLE II.

Number of boys in School July 1, 1885.....	290
Number received from July 1, 1885, to June 30, 1887.....	165
Whole number in School for the two years.....	455
Number released by Board of Trustees.....	113
Number escaped.....	6
Number died.....	2
Number pardoned by Governor.....	4
Whole number released, pardoned, died and escaped.....	125
Increase for the two years.....	40
Whole number in the School June 30, 1887	330
Average age of those received for two years	13

TABLE III.

Showing number of commitments each month.

July, 1885.....	3

THE FARM ACCOUNT.

The following account shows approximately the relation that the farm and garden sustains to the Institution as a source of revenue. The balance in favor of the farm is not large, but is, we think, as good a showing as has been made by the average farm during the past two years, and is good considering the *two* years of drought.

But we still believe the farm to be a necessary adjunct to a reformatory institution did it not pay any revenue, for the reason that farm work is so well adapted to growing boys and so conducive to good health—and again, such work is what many of our boys will do after leaving the School, and is therefore what they need to be instructed in doing:

DISBURSEMENTS.

To paid farmers' salary for two years	\$ 960.00
To paid assistant farmers' salary for two years.....	720.00
To paid broom-makers' salary six months each year.....	480.00
To paid gardeners' salary for two years.....	720.00
To paid for live stock for two years.....	376.36
To paid on broom account for two years.....	377.39
To paid on account of farm for repairs on machinery, blacksmithing, repairs on tools, corn, oats, plows, and all other items incidental to farm and garden	2,957.06
Total	\$ 6,590.81

RECEIPTS.

Showing the value to the Institution of the products of the farm and garden:

By hogs sold	\$ 1,051.72
By cattle and hogs sold.....	884.48
By brooms sold	1,111.09
By brooms used by School.....	250.00
By sand sold.....	3.75
By plants sold	2.00
By 70 head of hogs butchered, 25,500 lbs, at 4 cents.....	1,020.00

By 16 head of beef cattle butchered, 25,540 lbs, at 3 cents	\$ 766.20
By 250 bushels white beans, at \$1.50	375 00
By 2,100 bushels potatoes, at 40 cents.	840.00
By hauling 1,500 tons from depot, at 10 cents	750 00
By hauling 325 cords wood from timber, at \$1	325.00
By hauling 40,000 feet lumber from depot, at 50 cents	20.00
By hauling car lime from depot	4.00
By hauling 40 cords stone from quarry for boiler house.....	200.00
By hauling 40,000 brick for same.....	40.00
By 20 days' work with team excavating, at \$2.50.....	50.00
By 36,500 gallons milk at 10 cents per gallon	3,650.00
By keeping one team driving horses for use of School, at 25 cents per day	182 50
By garden vegetables as per gardeners' estimate for 1885 and 1886	4,984.00
Total	\$ 16,009.74
	6,590.81
Balance profit of farm two years	\$ 9,418 93

The preceding tables are as nearly correct as it is possible to make them from the information at our command. The support fund which I have disbursed has been paid out as per the financial statement, and no debts are unpaid.

HEALTH.

The health of the boys has been generally good. Two deaths have occurred; one from typhoid fever and one from peritonitis, thus making the mortality only about one-third of one per cent.

SCHOOLS.

The school work has been a marked success the past two years. With an enterprising principal, faithful teachers and good supply of books and apparatus the boys have been induced to take hold and accomplish much in the line of their studies. A few have graduated with sufficient education to teach school, and some of the best teachers in this and other counties are from the ranks of our graduates.

OTHER WORK.

The farm and garden have not been so productive as in former years, because of two successive years of drouth, yet they have been measurably profitable (see farm and garden report). A blacksmiths shop, tin shop and broom factory have been added to our mechanical

department within the past two years. In the blacksmith and tin shop we have so far done only the work for the Institution, while in the broom factory we have sold \$1,111.09 worth of brooms, about two-thirds of which is profit.

One of the greatest needs of the Institution in my opinion is more trades which the boys may learn. They are as a rule bright boys who would make the best of mechanics, and but few of them aspire to the professions of higher educational callings in life, hence the necessity of giving each boy a chance to learn a good trade. Give us more shop room and more trades, and we will send out better and more independent boys.

In conclusion I wish to express my thanks to the clergy of Eldora who have so kindly officiated here in our services, a part of the time without pay, and to the publishers of numerous papers who send their papers to the boys gratuitously, and to the Assistant Superintendent and Assistant Matron, and all the officers and teachers who have discharged their several duties so faithfully and well.

And to you, the Board of Trustees I am indeed very grateful for your uniform kindness and your wise counsel. Trusting that the biennial period upon which we are just now starting may be fraught with as many blessings as the one just closed, and that a kind Providence will continue to direct us all.

This report is respectfully submitted.

B. J. MILES,

Superintendent.

EIGHTH BIENNIAL REPORT
OF THE
SUPERINTENDENT
OF THE
GIRLS' DEPARTMENT.

SUPERINTENDENT'S REPORT.

To the Honorable Board of Trustees of the Iowa Industrial School:

GENTLEMEN AND LADIES—It is with some degree of embarrassment that I enter upon the duty of reporting to you the workings and the results of this department of the Industrial School for the biennial period just closed. My connection with the work covers only one-fourth of this period, and I can only speak of the present condition of things and the future demands.

I would not, however, forget to bear testimony to the excellent condition of the School as I took it from the hands of my predecessor, Mr. L. D. Lewelling, who has always shown such excellent ability in this work. But few changes were demanded. The carrying out of plans already made and extending the work already begun, was all that seemed to be required. This has been done as fully as the means at my disposal would permit.

From a careful examination of the records, I find that to-day the School is in a better condition, financially than it was two years ago. The expenditures have been wisely made and strict economy has been observed. The addition of eighty acres to the farm has enabled you to begin to provide more liberally and at the same time more economically for those in your charge, and speaks well of your forethought and careful discharge of the trusts committed to your hands. Coming years will more fully show your wisdom. This being the first year that the School has had the benefit of this additional land it will be impossible to give the financial results. It has been necessary to make expenditures in several directions that will diminish the net income from the land. Means should be provided for a thorough drainage. This done and every rod of ground will be productive, and the value of the land much increased.

The object of the work here being to reform such girls as cannot be cared for otherwise, and who would often become a dangerous

element in society, to prepare them to go out among their fellow-men, not only share of the vices that sent them here, but so instructed morally and intellectually, as well as in proper domestic habits that they may live worthy lives and become good members of society—it would seem to be the part of wisdom that all proper means should be employed and without parsimony. Half done is never well done; and nothing short of well doing can satisfy the people of the State that has made so good a record in all progressive measures.

At present our girls live in two families. This is more from necessity than otherwise. With the present accommodations the younger and the older, the better and the worse must be constantly thrown together. No satisfactory system of grading can obtain that will relieve this difficulty till other buildings are supplied. We much need another building similar to the one last erected. Its need is imperative if the best results would be secured. We have no hospital for our sick. This is a pressing want and as the school increases this want will be augmented.

The danger from fires is greater than usual among an equally large community. There are no adequate means of extinguishing fires. We are never safe from this destructive element. In order to reduce this danger to its minimum, I would recommend and urge that you earnestly consider the great advantage it would be to the State to light the buildings with electrical lights. It would be a sad catastrophe were our fine buildings burned to the ground—not to mention the horror of lives destroyed,—by some malicious individual carrying out the threats sometimes made to saturate with oil and apply the match. As a means of safety and for its economy it merits your careful consideration.

If a water-tower, with proper rooms beneath and attached, were placed on the north end of the boiler house, for storage and hospital uses, a great advantage to the work would be secured. This could be so constructed, and at moderate expense, that adequate store-room could be provided. At present there is none at all commensurate with our necessities.

New grain bins and cellar room should be provided for the increasing production of the farm. An addition to the stable is now an urgent necessity, as double the number of cows and young stock, as compared with two years ago, is now needing shelter.

The sanitary condition of the School is good. But very few ever

need medical treatment, excepting those who come here with chronic diseases or those brought on by want and exposure prior to their reception here.

The moral condition is far better than is generally known, and many of our girls go out from us well prepared to take their proper places in the world, and become good members in society. Safeguards are constantly thrown around them, and they are taught to value truth and honesty, and to strive to firmly ingraft them into their characters.

Allow me to suggest, in conclusion, that the good work accomplished in the past should be carried on to a still greater degree of success by using the necessary means to secure this result. The State cannot fail to appreciate our work and our necessities; neither will it fail to grant proper means to carry them forward when you properly set before them the facts, and ask such aid by the way of appropriations, as, in your judgment, seem to be needed.

And to the members of the Board of Trustees I wish to express my appreciation for the uniform kindness I have received from your hands since I have been connected with the School, for the confidence and kindness you have exhibited at all times toward my wife and myself in our efforts, as Matron and Superintendent, to properly grasp the work so recently begun, and, to the best of our ability, carry out your plans and wishes for the success of the School. I trust the pleasant relations now existing may continue, and that the blessings of God will be abundantly bestowed on us all in our labors.

Very respectfully submitted,

C. C. CORY,
Superintendent.

APPENDIX

TO THE

REPORT OF THE SUPERINTENDENT

OF THE

GIRLS' DEPARTMENT.

APPENDIX.

IS THE SCHOOL DOING ANY GOOD?

We are sometimes asked this question by persons who seem to be in earnest. But those who are familiar with such institutions it may seem superfluous to adduce evidence to show that, when properly conducted, they are a source of great and lasting good to society and a blessing to the children who come under their control. This is the testimony of all philanthropists of modern times.

It is true there are girls sent to this School who make little, if any, progress toward a better life. They are those who come from vicious parentage, from the most unfortunate conditions; from the mire and the clay. They have been conceived in sin and brought forth in iniquity. Their lives are controlled by one overwhelming propensity for self gratification. They are the victims of inherited tendencies, and they cannot be transformed into good citizens. But if such as these are too bad to be reformed, it is still possible that they may be improved by good food and kind influences. If they do not become good citizens they may at least become better animals.

But the chief good which arises from the commitment of such a class is the protection which is thus secured to more innocent girls, by removing the vicious ones from their midst. But there are those in whom there is no innate tendency to vice, or in whom it is only the result of outward causes.

It is this class that the Industrial School can and does save, and the results are beyond question. To give this statement weight, I would publish in this report the names and circumstances of many girls who have graded out of this School, and who are leading upright and industrious lives. But should this be done, the very fact that they have been children of such an institution would forever shut out all hope of aid or encouragement from those who affect to doubt their possible reformation.

A few weeks ago I received a letter from a girl who was number ten (that is to say, she was the tenth girl committed to the School). She was granted leave of absence as long ago as the year 1874, since which time we have watched her course and been acquainted with her career. She is still doing well, and writes as follows: "I am more than ever determined to do right. * * * I have such a good chance to make something of myself if I only will, and I am going to try my best."

No. 11—Was one of our most vicious girls. Before she attained eleven years of age she had set on fire, and burned, the barn and grain stacks of the gentleman with whom she lived. She was very wayward, was in the School a number of years, and it must be confessed we had little hope of her; but she now has a home with an excellent family, and we learn from the most reliable source that she is leading an industrious, Christian life.

No. 15—Was a very bad girl. Was committed at the age of sixteen, but we have it from the sheriff of the county to which she returned, that she has long since married and is leading a quiet life.

No. 22—Was an Irish girl, from low parents and surroundings. Granted leave several years ago. An affidavit is on file in this office, from an attorney who was requested to visit this girl, in which he states that she is an industrious domestic in the city of Keokuk, that she is well respected, and at last accounts had lived in one family more than a year.

No. 24—Was well spoken of by those who knew her for many months. We have not heard from her for a long time.

No. 32—Married an industrious young man and makes him an excellent wife. We have visited them at their own home a number of times. They are happy and prosperous.

No. 37—Was a bright and intelligent girl, committed for incorrigibility. We have received many letters from her, and also from her aunt, who is an excellent woman. At last accounts she was doing well.

No. 38—After her release, lived a long time next door to a gentleman who was a member of the Eighteenth General Assembly. She visits us often, and the gentleman says she is an excellent girl.

No. 43—Was a New York city waif, who came west from the Home for the Friendless. She was committed for larceny. While in the School she made some reputation for writing poetry, several poems being published in the Mt. Pleasant Journal. We are in fre-

quent communication with her. She has received a legacy, is happily married, and lives in Brooklyn, N. Y.

No. 44—Was committed from the city of Des Moines, for disorderly conduct. Was released on Christmas day, 1876, after being in the School a little over one year. After her release she learned dress-making. She worked near the School for several years, until her eyes became weak, when she obtained work in a private family as a domestic, and has continued ever since. She is faithful and conscientious in her labors, and is highly respected by all who know her.

No. 50—A colored girl who had a bad record. She is married, is an excellent cook, is popular with her friends, honorable in her conduct, and was a paper folder in the last General Assembly.

No. 52—Is a domestic in the city of Des Moines, and often visits the School.

No. 53—A bright girl; married a printer, and has a delightful family of little girls. We are familiar with her record since she left the School, and she is a good wife and mother.

No. 55—Released five years ago; is still working as a domestic in the village where the School is located, and visits us every Sunday.

No. 59—Married a blacksmith, who conducts business for himself. They have one or two children, and live in Mt. Pleasant.

Nos. 36 and 64—Were sisters, colored girls. They are leading quiet and industrious lives in the city of Des Moines.

No. 70—One of the brightest girls; graduated at a female seminary in Illinois, and now lives with her family, and enjoys in a high degree the confidence and respect of the community.

No. 71—The girl is married, and has visited us a number of times. She has one or two children, and is doing well, as shown by affidavits from a prominent attorney in her town.

No. 74—Committed for disorderly conduct at the age of fourteen, has lived in one family a number of years as a domestic, and is much esteemed by her employers.

No. 75—With her husband, is employed in a responsible position in one of the large public institutions of the State, and gives excellent satisfaction.

No. 91—Lives with her husband, who is a merchant in Boulder City, Colorado. She visited us this summer, with two bright children.

These statements can all be verified by information received from various sources, and there are very many cases not mentioned here

which are equally creditable. A number of these here mentioned have very bad records, and one who has surpassed in her attainments many girls of the best families was for a number of months a professional prostitute.

GENERAL INFORMATION.

The Girls' Department of the Iowa Industrial School is located at Mitchellville, Polk county, about seventeen miles east of the city of Des Moines. The buildings occupy one corner of a forty acre tract, and are situated about half a mile from town. They are approached directly through the corner of the farm which lies nearest town. The carriage-way on leaving the street corner passes between two clumps of shade trees into an open blue-grass lawn, through which it gently curves a few rods away to the main building—an elegant and substantial structure—and thence on to the barn. Here the drive branches: one road leading around the vegetable and fruit garden, and the other circling around a shady park between the house and barn, both deflecting roads again returning to the main carriage-way.

The plan of the Institution is an oblong square, the main building fronting the north end of the square, the graded school-building at the south end just opposite, while the family homes are arranged along the sides of the square opposite each other. Inside this open square stands the boiler-house, from which pipes are laid so as to supply hot and cold water and steam for heating and cooking to each of the separate buildings.

At present none of these family homes are built. One is in process of construction and will be completed in the fall, but its capacity being only about forty inmates, it will be necessary to keep a large number of girls in the main building a few years longer, or until the Legislature appropriates money to erect another of the family buildings. It is the design that each one of these family homes shall provide cooking, dining and sleeping for forty girls.

Each morning after breakfast all the girls will be assembled, half of the entire number sent to school, and the remaining half will go to their respective places of work under competent instructors. At noon when the bell rings each family will return to its own home for dinner, and after the noon hour they will again be assembled by the ringing of the bell to be detailed as in the morning, except that those who were in school in the forenoon will change places with those

1887.]

who worked. In this manner each girl will receive four hours schooling and four hours instruction in some kind of work each day.

This plan of detailing, so as to change from work to school, and from school to work, has already been practiced for a number years.

The family buildings will be very convenient for the purposes for which they are designed. The girls in each are accommodated with a large, well ventilated sitting-room, with two open fire-places, and sliding doors opening into a room at one end, which is ordinarily used for a reception room, but which may be quickly converted into a stage for theatricals, such as tableaux, charades, etc. This dining-room and kitchen are also on the first floor, and the girls' bed-rooms on the second and third floors. Here each girl has her own little room, six by ten, with single bed, cabinet wash-stand (which also serves for a bureau), wash-bowl, pitcher and other conveniences. At the ringing of the bell in the morning, each girl is expected to rise, put her room in order and be ready for breakfast at the proper signal, and after breakfast she enters upon the duties of the day.

THE DISCIPLINE

of the School is simple, but effective, and chiefly consists in a system of credit marks for good conduct. The law provides that all girls committed to the Institution may be released on probation after the lapse of one year, provided they show evidence of improvement sufficient to warrant such release.

The degree of improvement is indicated by certain credit marks for good conduct, together with proficiency in work and study. A "credit" consists of the aggregate of good marks obtained at roll-call each evening for one month. Credit twelve is the last and highest which can be obtained, but every girl must obtain credit twelve, and in every way give evidence of real reformation, before she can be released. One hundred marks may be obtained by a girl in one month, but only sixty marks each are necessary to obtain credit one, two, three, four, five, six, seven and eight. Sixty-five marks are required for credit nine, seventy-five for credit ten, eighty-five for credit eleven, and ninety-five for credit twelve.

Leave of absence is granted girls who obtain credit twelve, and they may then be returned to their parents or friends, or good homes will be found for them in private families. There are at present more than one hundred girls in the School, and among this number there are, of course, those who are too well contented with such a

home to be stimulated to good conduct by a desire to grade out. For such as these, more severe measures than the loss of credits must at times be resorted to. One of the most severe, and at the same time one of the most harmless methods of discipline is to send a girl to bed for some days in succession, or until she is willing to do better. The credit method is a sufficient restraining influence for most cases, and it is only the few who experience any other punishment during their stay in the School.

TO PARENTS AND FRIENDS.

Every girl is permitted to write one letter each month at the expense of the School. Parents and friends may write to the girls as frequently as they desire, but they should always avoid writing in a way to excite or disturb them. They should always give their full name and address in every letter. Parents may visit girls two or three times one year, to remain one day and night only. No visiting allowed on the Sabbath nor on holidays, such as Christmas, New Years and Fourth of July, unless by special arrangement with the Superintendent. All visits should be of an encouraging nature, and if parents desire their girls to improve under the influence of the School, they should admonish them to be obedient to their teachers, to be diligent and studious, and above all, they should convince them that there is no hope of release from the School except by real reformation, by obedience, and by advancement in their work and studies. All inquiries as to the time of girls coming home should be addressed to the Superintendent.

When girls are entitled to leave of absence, notice will be given, and on receipt of money to pay railroad fare, they will be forwarded to their parents.

Be sure to address all letters and parcels plainly, and in care of Industrial School, Mitchellville, Polk county, Iowa.

HOW CHILDREN ARE COMMITTED.

We often receive letters from parents or friends asking what legal process is required to send girls to this School. In reply we would say all that is necessary to be done is to make formal complaint to any judge in your district of the child's conduct. This may be done in open court, at the private residence of the judge, or elsewhere, provided he is willing. It then becomes his duty to hear

the evidence in the case; and if in his judgment the complaint is sustained by the evidence in the case, he may issue a writ commanding the sheriff of the county to deliver the child to the Superintendent of the Industrial School.

Complaint may also be made before a justice of the peace; but he cannot commit the child. He can only hear the evidence in the case, and forward it to the judge, who, if he may think best, will issue the order for commitment upon the written evidence submitted to him by the justice of the peace. For further information on the subject, see chapter five of the Code of 1873.

REPORT OF W. J. MOIR, TREASURER.

REPORT OF W. J. MOIR, TREASURER.

HON. THOMAS MITCHELL, *President of the Board of Trustees of the Iowa Industrial School:*

DEAR SIR—I herewith present my report as Treasurer of said School from July 1, 1885, to June 30, 1887, inclusive.

W. J. MOIR, *in account with the Iowa Industrial School:*
