

RECREATION ON THE STATE FOREST

HUNTING AND FISHING

The entire forest (except the Reichelt Unit and campgrounds) is open to public hunting and provides excellent hunting opportunities for many species, especially deer and turkey. There are four large ponds stocked with bluegill, largemouth bass, and catfish. Consult DNR regulations for seasons, limits, and other rules.

TRAILS

Most of the recreational development is located on the Lucas, Whitebreast, and Woodburn Units. There are 30 miles of trails that are mowed and signed for designated purposes, such as hiking, mountain biking, horseback riding, and snowmobiling. **Motorized vehicles are prohibited on all trails.** The Woodburn Unit has trails designated exclusively for backpacking with pack-in camp sites.

CAMPING

Campgrounds are located in the Lucas and Whitebreast Units. Our 86 campsites are open year-round and will accommodate tents, trailers, and RV's. Of these campsites, 36 are equestrian. All sites are primitive with no electricity but most have running water. Picnic tables, fire rings and pit vault latrines are available. Firewood for campfires may be cut from dead and down trees – no standing trees, dead or alive, may be felled for firewood without a permit. Campgrounds are administered by the State Park Bureau and a self registration fee is charged (641-774-5632 for more information).

STEPHENS

Stephens State Forest is named for the late DR. T.C. Stephens, a prominent educator and native of Sioux City, Iowa. The forest, located in south central Iowa, is over 14,000 acres in size and is divided into eight separate management units.

Lucas Unit	1,192 acres
Whitebreast Unit	3,207 acres
Woodburn Unit	2,011 acres
Cedar Creek Unit	1,888 acres
Chariton Unit	1,513 acres
Thousand Acre Unit	1,616 acres
Unionville Unit	2,245 acres
Reichelt Unit	440 acres

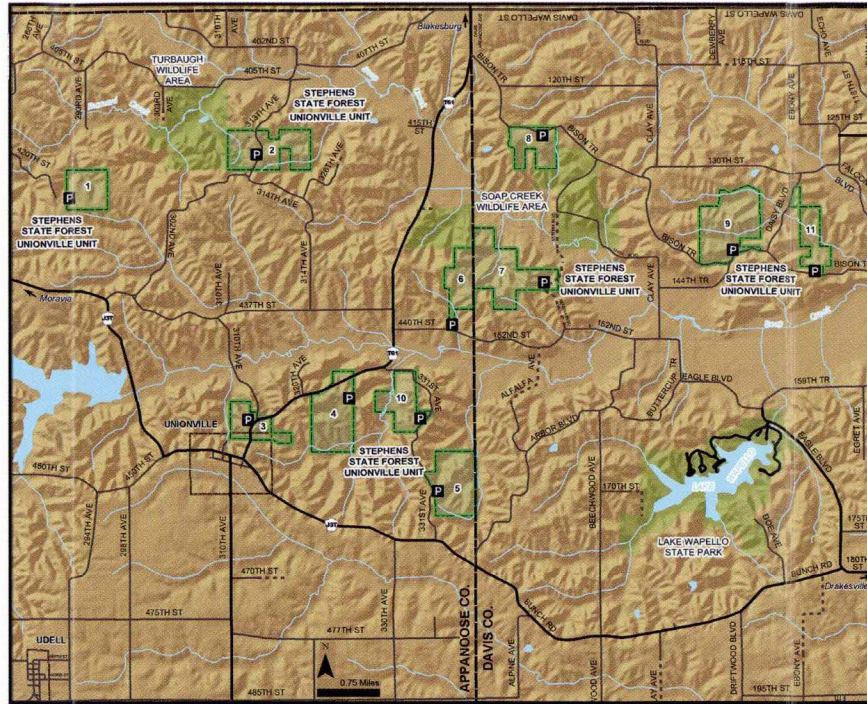

MANAGEMENT OF THE STATE FOREST

Stephens State Forest is actively managed by the Iowa Department of Natural Resources Forestry Bureau to provide timber resources, wildlife habitat and recreational opportunities. The primary mission of Iowa's state forests is to demonstrate sound forest management under the principles of multiple use and sustainability.

The forest is intensively managed through thinning overcrowded trees, harvesting mature, diseased or damaged trees, and planting trees in open areas to create new forests. Regeneration of the native oak-hickory forest is a major management emphasis.

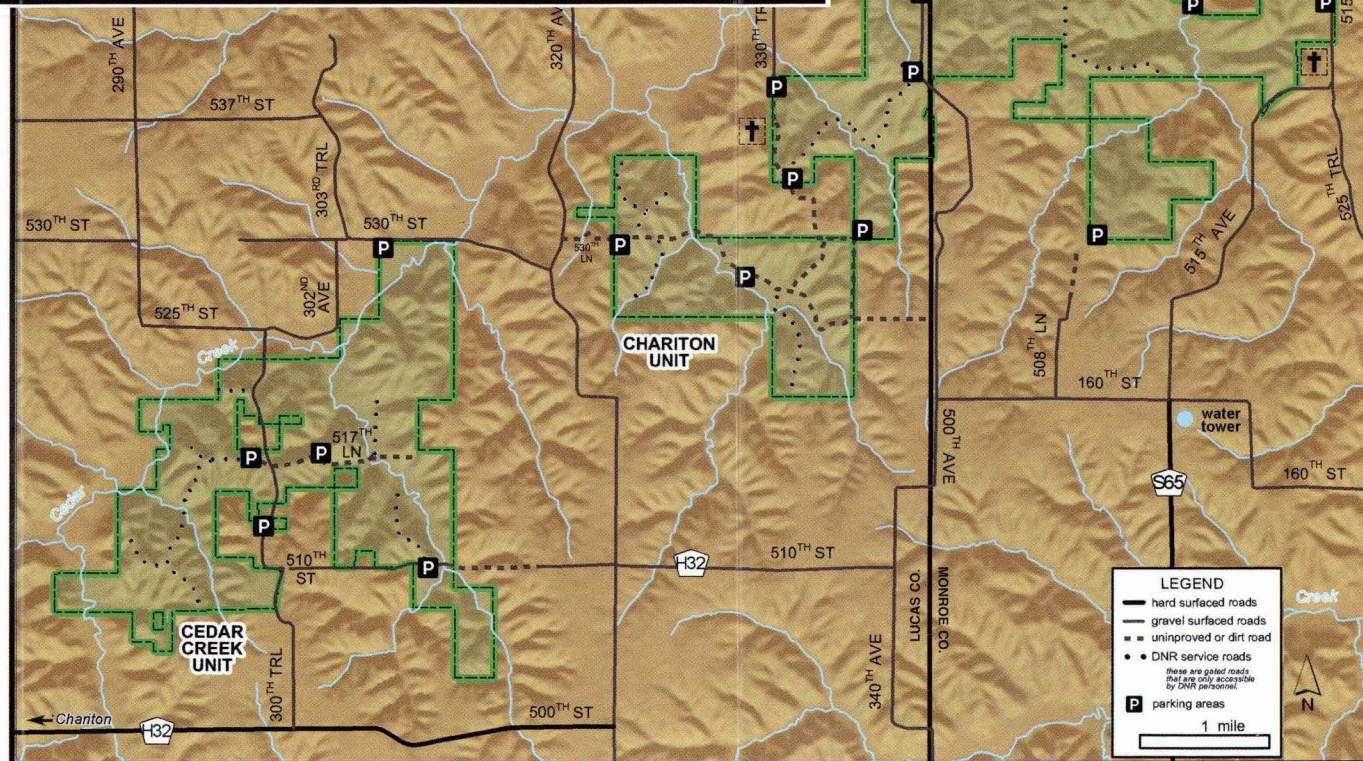

Numerous grasslands and native prairie remnants on the forest are managed through periodic prescribed burning. About 1,000 acres are managed as agricultural land including food plots for wildlife.

The forest is home to numerous wildlife species including deer, turkey, bobcat, quail, pheasant, squirrel, rabbit, and many songbird species. Diverse management insures habitat for all native species.
