County Population Estimates: July 1, 1988, 1987, and 1986

U.S. Department of Commerce
BUREAU OF THE CENSUS

Series P-26, No. 88-A
Issued August 1989

This report presents estimates of the total population as of July 1, 1988, revised estimates for July 1, 1987 and 1986, and components of population change, 1980-88, for 3,139 counties and equivalent areas in the United States (including boroughs and census areas in Alaska, parishes in Louisiana, the District of Columbia, and independent cities in Maryland, Missouri, Nevada, and Virginia). No separate estimate is shown for Kalawao County, Hawaii (1980 population of 144); its population is included in the estimate for Maui County.

The series includes estimates for two counties established since the 1980 census—La Paz County, Arizona (separated from Yuma County in 1983) and Cibola County, New Mexico (separated from Valencia County in 1981). In addition, since 1980, Alaska has established two new boroughs, Northwest Arctic (1986), which is generally coextensive with the former Kobuk Census Area, and Aleutians East (1987), which is mostly the peninsular part of the old Aleutian Islands Census Area. The remaining part of that census area is still identified here under the old census area name (the name will change to Aleutians West Census Area as of January 1, 1990). The 1980 populations shown for these areas reflect their current boundaries.

Revisions in the estimates for 1987 and 1986 reflect corrections made in one method used in preparing the estimates (the Administrative Records method) for geographic coding errors causing the misallocation of migrants. For further information, contact the Population Estimates Branch, Population Division, Bureau of the Census, Washington, DC 20233.

Table 1 presents estimates of the population of counties and county equivalents in alphabetical order by State, together with 1980-88 components of population change (births, deaths, and net migration). The 1988 county estimates presented in this report will be superseded by revised population estimates in subsequent Current Population Reports, Series P-26. Comparisons made earlier in the decade suggest that revised estimates differ on the average from the first estimate series by about 1 percent, disregarding sign. The estimates presented in the table have been rounded to the

nearest hundred without adjustment to the State totals, which were independently rounded to nearest thousand. Percentages are based on the unrounded numbers.

METHODOLOGY

For the great majority of States the 1988 estimates were developed using the revised county estimates for July 1, 1987, as a base and adding estimates of population change from July 1, 1987, to July 1, 1988, using a variation of the Administrative Records method. The revised estimates for 1986 and 1987 use methods and data input that are specific to each State.

Revised 1986 and 1987 Estimates

Table 2 shows the specific methods used to develop the revised county estimates under the Federal-State Cooperative Program for Population Estimates (FSCPE). The objective of this program is the development and publication of yearly population estimates for counties or comparable areas using uniform procedures standardized for data input and methodology.

All 50 States, the District of Columbia, and the Commonwealth of Puerto Rico participate in this program to develop population estimates for counties or equivalent areas. The agencies that work with the Census Bureau under this program are listed in appendix A.

The methods used to prepare the revised estimates were selected jointly by the individual States and the Bureau of the Census. The methods were tested for the 1970's against the 1980 census and, based on these test results, the most appropriate methods were selected for each individual State. Therefore, the number of methods used may vary from State to State. For most States, the best estimates were obtained from an average of the Ratio-Correlation method and the Administrative Records method estimates. In a few States, Component Method II estimates or estimates based on

State-specific methodologies are averaged with the estimates provided by one or both of the other methods on the basis of the evaluations against the 1980 census. For a more detailed description of the overall estimates program, see Current Population Reports, Series P-26, No. 21. An analysis of the 1980 test for counties has been published in Series P-25, No. 984.

The principal estimating methods used are:

1. The Administrative Records method. This is a procedure that obtains separate measures of each component of population change (net migration, births, and deaths). The procedure relies on Federal income tax data to measure the net intercounty migration of the household population under 65 years old, reported resident birth and death statistics to estimate net natural change, and data on Medicare enrollees to estimate the population 65 years old and over. Tax data for two successive years are used to determine the number of persons whose county of residence changed during the period. From this series we calculate a net migration rate and apply it to a population base consisting of the household population under 65 years old. We combine the resultant estimates of net migration with independent estimates of the population 65 years old and over, inmates of institutions, college students in dormitories, military personnel living in barracks, and the other components of population change (resident births and deaths, immigration from abroad, and net movement of military barracks personnel to the civilian population) to yield an estimate of the total population. A detailed description of the Administrative Records method is contained in Current Population Reports, Series P-25, No. 699.
2. The Ratio-Correlation method. This method uses a multiple-regression equation based on selected symptomatic indicators (registered vehicles, school enrollment, births, deaths, etc.) to estimate the change in a county's proportionate share of its State's population between 1980 and the estimate date. The particular set of symptomatic indicators selected and the resulting multiple-regression equations are unique to each State. See each State report in Series P-26, No. 85-AL-C to 85-WY-C for details on individual equations.¹
3. Component Method II. This method is similar to the Administrative Records Method in that it uses resident birth and death statistics to measure net

natural change, but it relies on school enrollment figures to measure net migration. The estimates produced by Component Method II are specific to the household population under 65. To this population is added an estimate of the population 65 and over based on the change in Medicare enrollees from 1980 to the estimate date, the institutional and college populations, and reported military populations living in barracks.

4. State-specific methods. In two States, a method unique to the State is averaged with two of the above methods. In Florida, population change is estimated by the Housing Unit method, using building permits, demolitions, and electric utility connections to estimate changes in the number of housing units or households and converting this to population change. In California, a component method uses address changes in California drivers' licenses to estimate migration of the population 18 to 64. California uses school enrollment to estimate the population under 18 and Medicare data to estimate the population 65 and over.

1988 Estimates

For the States of Alaska, California, Florida, Illinois, Indiana, Michigan, Missouri, New Jersey, North Carolina, Ohio, Vermont, and Virginia, we averaged county population estimates for July 1, 1988, prepared by State agencies participating in the FSCPE with the 1988 estimates derived by the Administrative Records method. This second method used was the Housing Unit method in Florida and the Ratio-Correlation method in the other 11 States. In addition, in two states a third method of estimation was used for the 1988 estimates—one based on drivers' license address change was used in California, and Component Method II was used in New Jersey.

To obtain the 1988 county estimates for all other States, population change was estimated for the period July 1, 1987, to June 30, 1988, by a variation of the Administrative Records method, and this change was added to the revised 1987 estimates. The net migration rates used were based on Federal income tax data for 1987 and 1988. The other components of population change for the year, as well as the special populations to be added for July 1, 1988, (ages 65 and over, plus persons in institutions, dormitories, and military barracks) were approximated using data for the previous year or an extrapolation of 1986-87 trends.

Adjustments

As a last step, the county estimates were adjusted to independent State estimates published by the Bureau of the Census in Current Population Reports, Series P-25,

¹The Ratio-Correlation method has been dropped for Georgia and Virginia, and equations have changed since these reports for Alabama, Arizona, Connecticut, Illinois, Indiana, Maine, Massachusetts, Michigan, Missouri, Montana, Nebraska, New Hampshire, Ohio, Oklahoma, Oregon, Rhode Island, Tennessee, Utah, and Wisconsin. Contact the Population Estimates Branch, Population Division, Bureau of the Census, Washington, DC, 20233 for further information.

No. 1045. The State and county estimates also reflect corrections to the 1980 census counts, if any, made subsequent to the release of the published tabulations.

The population estimates incorporate special censuses for entire counties taken through 1988 by the Bureau of the Census or by the FSCPE agencies in Alaska, California, or Nevada. The census dates and populations are listed in table A.

RELATED REPORTS

Revised population estimates for counties and metropolitan statistical areas (MSA's) for the years 1981 to 1985 are published for individual States in Current Population Reports, Series P-26, No. 85-AL-C though 85-WY-C. They supersede all previous reports in Series P-26 covering county estimates for the 1980's.

Estimates for MSA's for 1988 and revised estimates for 1987 appear in a Census Bureau press release. A summary report on patterns of metropolitan area and county population growth for the 1980-87 period is published as Series P-25, No. 1039.

Population estimates for counties and approximately 36,000 subcounty areas are released biennially. Estimates for July 1, 1986, together with per capita income for 1985, are published in five regional reports in Series P-26 (No. 86-NE-SC, Northeast; 86-ENC-SC, East North Central; 86-WNC-SC, West North Central; 86-S-SC, South; and 86-W-SC, West). Estimates for July 1, 1988, will become available to the public in October 1989, and they are scheduled to be published in Series P-26 in this same regional format by the end of the year.

In advance of formal publication in Series P-25 or P-26, population estimates for counties, MSA's, and subcounties are released on CENDATA, the Census Bureau's online system of electronic publication. CENDATA is available through two commercial vendors, CompuServe and DIALOG. (Call (301) 763-4100 for details.) Concurrently with the electronic publication, the public may access the estimates at cost on paper copy, diskette, or 9-track tape. For further information, call the Population Estimates Branch at (301) 763-7722.
