INTERNATIONAL INFLUENZA ACTIVITY SUMMARY - WHO

Percentage of respiratory specimens that tested positive for influenza, by influenza transmission zone¹. Map generated on 22 December 2022.

The boundaries and names shown and the designations used on this map do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Colored and dashed lines on maps represent approximate border lines for which there may not yet be full agreement.

INFLUENZA TESTING AT THE STATE HYGIENIC LABORATORY

Cumulative Influenza Viruses Detected by SHL by Age Group (10/3/2021 - Current Week)

65 and over	2	8	28	38	0	0	0	0
Unknown	0	0	0	0	0	0	0	0
Total	9	63	165	237	0	0	0	0

Table Note: Cell counts of three or less are sometimes suppressed to protect confidentiality. Totals by age may not add up to totals by subtype/lineage due to missing age information. Only cases of Iowa residents are included. Specimens listed as “not subtyped” may be pending or were not able to be subtyped due to weak positive lab results. This can be due to poor collection, timing of collection or stage of infection.

Influenza Viruses Detected by SHL by Week (10/3/21 - Current Month)

Graph Note: Only viruses that have been assigned a subtype or lineage are shown.

SHL Flu Testing Note: The State Hygienic Laboratory (SHL) is the primary laboratory in Iowa characterizing specimens for influenza surveillance. SHL reports the number of tests performed and the type and subtype/lineage of positive tests to the influenza surveillance network daily. SHL also sends a portion of specimens to CDC for further characterization.

2017-18 2018-19 2019-20 2020-21 2021-22 2022-23

ILI by Season

ILI by Age Group Current Week

MMWR Week	End Date	Age 0-4	Age 5-24	Age 25-49	Age 50-64	Age 65 and older	Total ILI	ILI Pct
52	12/31/2022	27	33	30	13	25	128	4.77%

Outpatient ILI Note: Outpatient health care providers who participate in the ILINet (a national influenza surveillance program) report the number of patients seen with influenza-like illness and the total number of patient visits each week. The ILI Definition changed in 2021-22 so that persons with ILI symptoms (cough, sore throat, fever) will be counted even if positive for other respiratory illness (e.g., COVID-19) which makes comparison across seasons difficult.
