November, 1992

<u>Iowa Jobless Rate Up a Smidgen to 3.8% in September; U.S. at 7.5%</u>

Iowa Department of Employment Services officials reported a small increase in the September jobless to 3.8% from the 3.6% August estimate. This follows three consecutive months of decline. In September, 1991 the state's jobless rate was 4.2%. The U.S. jobless rate dropped slightly in September to 7.5%.

"While the number of unemployed persons collecting unemployment benefits dropped in September, the number of new entrants into the labor force was up," said DES director Cynthia Eisenhauer.

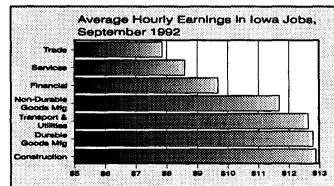

Nonfarm employment rose 16,800 in September, largely due to the return of faculty and staff for the beginning of the fall semester in public and private schools. This was somewhat offset by the normal seasonal reductions that occurred in amusement and recreation jobs.

Employment in the goods producing sectors continues to be flat, poised to respond to that much-heralded national recovery. Durable goods manufacturers lost 1,500 jobs over the year through layoffs or plant closings in industrial machinery, primary and fabricated metals and instruments. This was more than offset by the growth of 7,200 jobs in the service producing sectors.

For more detailed labor market information contact Employment Services economist Ann Wagner at (515)281-8182.

Housing Permits Soften in September; Still Up 31% for Year-to-Date

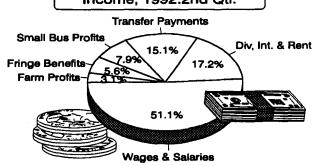

The housing boom in Iowa may finally be topping off - but, what a topping off. Three-quarters of the way through the year, the value of permits issued by the 47 largest communities is 31% above the same period in 1991.

In four communities (Altoona, Charles City, Clear Lake and Storm Lake) the housing permits issued during the first nine months of 1992 more than doubled the same period in 1991. In another sixteen communities the growth rate exceeded 150%.

Each month, IDED staff survey the building departments of 47 communities in Iowa - nearly every community with a population of 7,000 or more residents.

Second Quarter Personal Income 4.6% Above 1991 Level

Sources of Iowa's Personal income, 1992:2nd Qtr.

Led by wages and small business profits, Iowa second quarter personal income estimates were up 4.6% compared to the same quarter in 1991. The 0.9% drop from first quarter 1992 was the result of normal seasonal patterns of income flow - the state estimates are not seasonally adjusted.

Dividend, interest and rent income showed negligible growth for the year - no surprise to anyone watching current interest rates. The outlook for the rest of the year should be little different. The industry disaggregation showed strongest gains in construction and services, weakest in durable goods manufacturing.

Iowa New Car Sales Continue Slipping; Down 9% for Year-to-Date

Not so many years ago, the Russian newspaper, *Izvestia*, had the dubious task of reporting on an American soccer victory over the Russian team. Their headline read "Russian soccer team places second; American team ranks next-to-last."

With this same spirit we report that Iowa sales for foreign carmakers are down 11% for the year, U.S. carmaker sales fell less. During the first eight months of this year domestic-sponsored import sales in Iowa gained market share, rising from 5% to 6% of total sales.

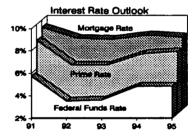

January-August New Car Sales in Iowa										
			Difference	Percent Difference

Modest U.S. Interest Rates Expected Through 1995

The econometricians at DRI/McGraw-Hill expect mortgage rates to remain near current levels through 1995, even with an expected 1.2% increase in the prime rate. Slowly improving economic performance with little inflationary pressures is the

apparent reason. U.S. exports are expected to increase 5-6% per year during this period. Midwestern industrial states, including Iowa, will benefit most from this growth.

U.S. Long-Term Economic Outlook

ISU Demographers Provide 3/4th Inch of Vital Statistics

In 374 pages, two ISU demographers, Willis Goudy and Sandra Charvat Burke, provide the curious with more information about Iowa county statistics than ever before. The tables include trends and historical accounts of births, deaths, housing status, marriages, dissolutions, land values, vehicle registration, labor force, poverty rates, crime rates and income rates.

This book is a must for every business or governmental planner or policy maker. The price is a bargain \$25 (\$26.25 for those required to pay state sales tax - and you know who you are). Send your orders to Census Services, 320 East Hall, Iowa State University, Ames, IA 50011.

Chicago Fed Report: Farm Equipment Sales Sluggish

Despite lower interest rates, a slight increase in crop acreage, and a likely bumper harvest, sales of tractors and combines turned lower in 1991 and have continued the slump into 1992. According to Chicago Federal Reserve Bank economist Gary Benjamin, "the number of new tractors and combines sold to U.S. farmers through August of this year was off 18 percent from last year's pace and 24 percent below the level reached during the first eight months of 1990."

The Fed report offered several reasons for this downturn in equipment sales. In the short term, the "retreat in farm sector earnings" was viewed as a negative for sales. The latest USDA estimates indicate that net cash farm earnings fell 5% last year and is likely to see a comparable decline in 1992.

On the long term horizon, weaker federal farm price support programs, continuing changes in tillage practices and a move

> toward custom harvesting operafor farm equipment.

tions will likely reduce the demand

Sorry Incumbents, U.S. Misery Up; Iowa Less Miserable than the Rest

Economists have concocted a measure for voter dissatisfaction with the political incumbents called the misery index. It purports to aggregate into one number our society's two major economic woes: inflation and unemployment. It seems to be a good bellwhether. The party in power was ousted in every post-World War II presidential election that occurred in a year during which the index was rising.

The 1992 index is up from 1988 and from 1991 levels. That should not bode well for incumbents. Iowa, on the other hand, does not appear to be as 'miserable' as the rest of the nation. Our index level is about 30% below that of the U.S. While Iowa's economic environment has exceeded the nation's during each of the past six presidential elections, this year the difference is greater than ever before.

The theory: voters across the nation will express their dissatisfaction with incumbents this year, but less than they did in 1980. And Iowa voters will express less dissatisfaction than voters elsewhere. By the time you read this we will all know whether the misery index is a keen indicator of the public mood or just more voodoo economics.
