

Iowa is divided into agricultural statistics districts for convenience in compiling and presenting statistical information on crops and livestock. These nine districts are outlined on the above map. The districts are designated as follows: Northwest (NW), West Central (WC), Southwest (SW), North Central (NC), Central (C), South Central (SC), Northeast (NE), East Central (EC), and Southeast (SE). In this bulletin, tables with statistical information by county have the counties grouped alphabetically within each district. Totals and averages are shown for each district.

Following is an alphabetical list of counties showing the crop reporting district in which each county is located:

Message from the Director
National Agricultural Statistics Service
Iowa Field Office

The USDA's National Agricultural Statistics Service, Iowa Field Office is pleased to collaborate with the Iowa Farm Bureau to provide you the latest edition of the *Iowa Agricultural Statistics**. This statistical profile of Iowa's agriculture not only includes state level information but also includes information for every Iowa county.

Enclosed you will find many interesting statistics about Iowa's vibrant and dynamic agricultural industry. I would like to highlight the fact that in the 2008 ranking of states, Iowa ranked number one in:

- Corn Production
- Soybean Production
- Hogs & Pigs inventory & value
- Commercial hog slaughter
- Egg production
- Capacity of on-farm grain storage
- Capacity of commercial grain facilities
- Harvested acreage of principal crops
- Value of Field and Miscellaneous crops

Iowa is ranked number two in:

- Principal crops total value
- Sows that farrowed
- Pig crop inventory
- Red meat production

Only with the support of the entire agricultural industry is the publication and dissemination of agricultural statistics possible. I want to thank the Iowa farmers who completed their questionnaires on inventories and production, the buyers and processors who graciously provided data on their inventories and purchases, as well as all those who supplied analyses that made the *Iowa Agricultural Statistics* possible. It is only with your assistance that NASS is able to complete its mission of providing timely, accurate, and useful statistics in service to U.S. agriculture.

Thank you for your support and interest in Iowa agriculture. The Iowa Field Office staff is dedicated to meeting the agricultural data needs of all users. Please contact us anytime with your questions, comments, and requests for information.

Greg A. Thessen, Director

¹The "New Definition" of a farm, starting in 1975, includes places which had annual sales of agricultural products of \$1,000 or more. This is the same definition used by the Department of Commerce, Bureau of the Census, for the 1978 Census of Agriculture. The "Old Definition" of a farm included places of 10 or more acres and had annual sales of \$50 or more and places of less than 10 acres that had annual sales of \$250 or more.

2008 Iowa Crop Summary

The 2008 crop season began with cold, wet weather conditions in April. The wet fields slowed progress significantly, leaving only 3.2 total days suitable for fieldwork during the month. By the end of April, corn planting was just starting, and only 28 percent of the oats had been planted. Both crops well behind their 5 year averages.

Soil remained wet throughout May, but farmers took advantage of a few windows for planting oats, corn, and soybeans. The first week of May proved to be very wet on the eastern two-thirds of the state. However, the western third of the state managed to plant over 30 percent of their corn during the week. A few breaks in rain during the second and third week of May allowed for the rest of the state to make progress with their planting. At the end of May, 81 percent of soybeans had been planted and nearly 60 percent had emerged. Corn planting was 97 percent finished and 77 percent had emerged. By the end of May 94 percent of oats had emerged and the first cutting of alfalfa was 8 percent complete.

The first week of June brought severe storms across Iowa. Some areas received more than 8 inches of rain during the week. Standing water was evident throughout fields in the state and flooding near rivers became a major concern. Seventy-four percent of the state had a surplus topsoil moisture level. The second week in June continued the pattern of severe weather. Yellowing and stunting was occurring in the corn crop and soybeans were showing some signs of seedling disease. In addition, much of the alfalfa first cutting was being abandoned because farmers were unable to get at the wet fields. At the end of the second week in June, 15 percent of the corn and soybean crop was in either poor or very poor condition. The third and fourth weeks of June began the recovery stage for crops in Iowa. Drier conditions allowed soil moisture to move away from surplus levels and crops to develop. Also, farmers were able to replant their flooded crops. Eleven percent of the corn crop and 12 percent of the soybean crop had to be replanted during the month. By June's end, the corn stand was at 84 percent, with 100 percent being normal. Oats were 68 percent headed and just starting to turn color. Soybeans were 92 percent emerged. Alfalfa first harvest was 83 percent complete.

Weather in July varied significantly across the state. The northern districts were relatively dry and experienced rapid crop maturation. Whereas the southern districts experienced periods of heavy rain and hail. By the end of the month, northern districts

average topsoil moisture was rated 14 percent surplus. Southern and central districts topsoil moisture was rated 42 percent surplus. Many corn and soybean fields were experiencing uneven maturation problems. By month's end corn was 67 percent tasseled and 45 percent silked, far behind the five-year average. Soybeans were 67 percent bloomed and 26 percent were setting pods. Oat harvest was beginning and the second alfalfa crop was just over half harvested.

Spraying for aphids moved into full swing during August. Most of Iowa experienced drier weather during August. The southwest district was the driest area, rating their topsoil moisture at 36 percent very short. Soybeans were just starting to turn color across the state and one-third of the state's corn was in or past the dent stage. In addition, the third crop of alfalfa was 50 percent complete. August had over 25 days suitable for fieldwork and proved to be a productive month for farmers.

Early September brought colder nightly temperatures which slowed crop maturation. However, by the third week of September, warmer weather returned, and most field crops made significant progress. Soybean harvest was just beginning, primarily in the northern districts. By month's end, 8 percent of the soybean crop was harvested across the state. Corn that was mature and safe from frost was rated at 45 percent, well below the five-year average of 85 percent. Also, some farmers were able to get a fourth cutting off of their alfalfa fields later in the month.

The first two weeks of October allowed farmers to make significant progress harvesting their soybean crop. However, rain fell across the state during the third and fourth weeks which slowed harvest. By the end of October, 87 percent of the soybean crop had been harvested but only 20 percent of the corn crop had been harvested. Twenty-eight percent of the state reported having a surplus amount of topsoil moisture the last week of October.

As November began, harvest was still in full swing. By the second week, soybean harvest was wrapping up across Iowa. Freezing temperatures allowed equipment back into the fields during the third and fourth weeks of November. By the end of November, 94 percent of the corn crop was harvested and 43 percent of the fertilizer application had been completed.

¹Total supply includes carryover, production, and imports. ²"Ending stocks available by days" is calculated by dividing the current year's total use (feed & residual; food, seed & industrial; exports) by days during year to obtain a daily use. The ending stocks are then divided by the daily use to obtain stocks available by days. ³Estimated. ⁴Projection June 2009.

Biotechnology Varieties, Iowa and U.S.

USDA, National Agricultural Statistics Service conducts the June Agricultural Survey each year. Randomly selected farmers across Iowa are asked if they planted corn or soybean seeds that, through biotechnology, are resistant to herbicides, insects, or both. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). Stacked gene varieties include those containing biotech traits for both herbicide and insect resistance.

Objective Yield Data Corn for Grain

The National Agricultural Statistics Service conducts objective yield surveys in randomly selected plots in corn for grain fields. These fields are visited monthly from August through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

Objective Yield Data Soybeans

The National Agricultural Statistics Service conducts objective yield surveys in randomly selected plots in soybean fields. These fields are visited monthly from August through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

2008 Livestock Summary

Iowa

Iowa's cattle, hog, and sheep producers received \$7.67 billion from marketings in 2008. This was up from the \$6.87 billion received in 2007. Cattle accounted for \$2.88 billion of the cash receipts in 2008 while hog sales totaled \$4.76 billion and sheep \$30.3 million. This compares to 2007 receipts of \$2.55 billion for cattle, \$4.29 billion for hogs, and \$33.1 million for sheep.

Cattle: Iowa producers had 39.5 million cattle and calves on farms as of January 1, 2009, down 1 percent from January 1, 2008. Cows and heifers that have calved totaled 1.14 million head, down 3 percent from a year earlier. Of this total, 925,000 million head were beef cows, down 4 percent from last year, and 215,000 head were milk cows, unchanged from last year.

Heifers weighing 500 pounds or more, at 870,000 head, were down 9 percent from the previous year. Of this total, 140,000 were beef cow replacements, 130,000 were milk cow replacements, and 600,000 were other heifers.

Steers weighing 500 pounds or more, at 1.39 million head, were up 7 percent from a year ago. An estimated 70,000 bulls weighing 500 pounds or more were on hand, unchanged from last year. Calves weighing 500 pounds or less totaled 480,000 head, down 2 percent from the previous year. The estimated 2008 calf crop for Iowa is 1.07 million head, up 1 percent from a year ago.

Hogs: Iowa continues to rank number one among the states in hog inventory. Hogs and pigs on hand December 1, 2008 totaled 19.9 million, or almost 30 percent of the Nation's hogs.

The state's pork producers farrowed 2.04 million sows from December 2007 through November 2008, up 5 percent from the 1.94 million sows farrowed during the same period a year earlier. The average pigs saved per litter was 9.36, resulting in a pig crop of 19.1 million, up 7 percent from the previous year. Marketings of hogs were 38.8 million head in 2008, up 13 percent from 2007.

Sheep: Sheep numbers on January 1, 2009 in Iowa totaled 200,000 head, down 11 percent from January 1, 2008. An estimated 183,000 lambs were born during 2008, down 6 percent from the previous year. The 195,000 sheep shorn in 2008 produced 1.18 million pounds of wool valued at \$413,000.

Milk Production: Iowa dairy farmers produced an estimated 4.32 billion pounds of milk during 2008, up almost 1 percent from 2007. There was an average of 216,000 milk cows on hand during 2008, up 1 percent from the 213,000 a year earlier. The annual average milk produced per cow was 19,995 pounds, down from the 20,085 pound average in 2007.

Red Meat Production: Slaughter plants in Iowa produced 7.07 billion pounds of red meat (beef, veal, pork, and mutton) during 2008, a 7 percent increase from 2007.

United States

The 2008 gross income from all cattle, hogs, and sheep for the U.S. totaled \$65.2 billion, down 1 percent from 2007. Gross income increased for hogs and pigs, but decreased for cattle, calves, sheep, and lambs. Hogs and pigs gross income increased 9 percent. Cattle and calves gross income decreased 3 percent and sheep and lambs decreased 5 percent.

Total 2008 cash receipts from marketings of meat animals decreased 1 percent to \$64.7 billion. Cattle and calves accounted for 74 percent of this total, hogs and pigs 25 percent, and sheep and lambs 1 percent. Production increased for hogs and pigs, but decreased for cattle, calves, sheep, and lambs. Average prices were up for hogs, pigs, and lambs, while cattle, calf, and sheep prices were down.

Cattle and Calves: Cash receipts from marketings of cattle and calves decreased 3 percent from \$49.8 billion in 2007 to \$48.2 billion in 2008. All cattle and calf marketings totaled 54.2 billion pounds in 2008, down 1 percent from 2007. The U.S.

annual average price per 100 pounds live weight for cattle was \$89.10, a decrease of \$0.80 from 2007. For calves, the annual average price decreased from \$119.00 to \$110.00.

Hogs and Pigs: Cash receipts from hogs and pigs totaled \$16.1 billion during 2008, up 9 percent from 2007. Marketings totaled 32.7 billion pounds in 2008, up 8 percent from 2007. The U.S. annual average price per 100 pounds live weight increased from \$46.60 in 2007 to \$47.00 in 2008.

Sheep and Lambs: Cash receipts from marketings of sheep and lambs in 2008 were \$451 million, down 5 percent from 2007. Marketings decreased 6 percent to 526 million pounds. The U.S. annual average price per 100 pounds live weight for sheep decreased from \$31.00 in 2007 to \$27.20 in 2008. For lambs, the annual average price increased from \$98.50 to \$99.60 in 2008.

THANK YOU

Much of the data used to calculate statistics published by the National Agricultural Statistics Service is collected by a part-time staff of telephone and field enumerators. This enumerator staff is employed by the National Association of State Departments of Agriculture (NASDA) and serves as outside contract workers for the USDA. The Iowa Field Office thanks the Iowa enumerators and gratefully acknowledges their contribution and dedication in providing Iowa with the highest quality agricultural information possible.
