

INTEGRATED TESTING SERVICES SNAPSHOT

HIV Screening: 2021

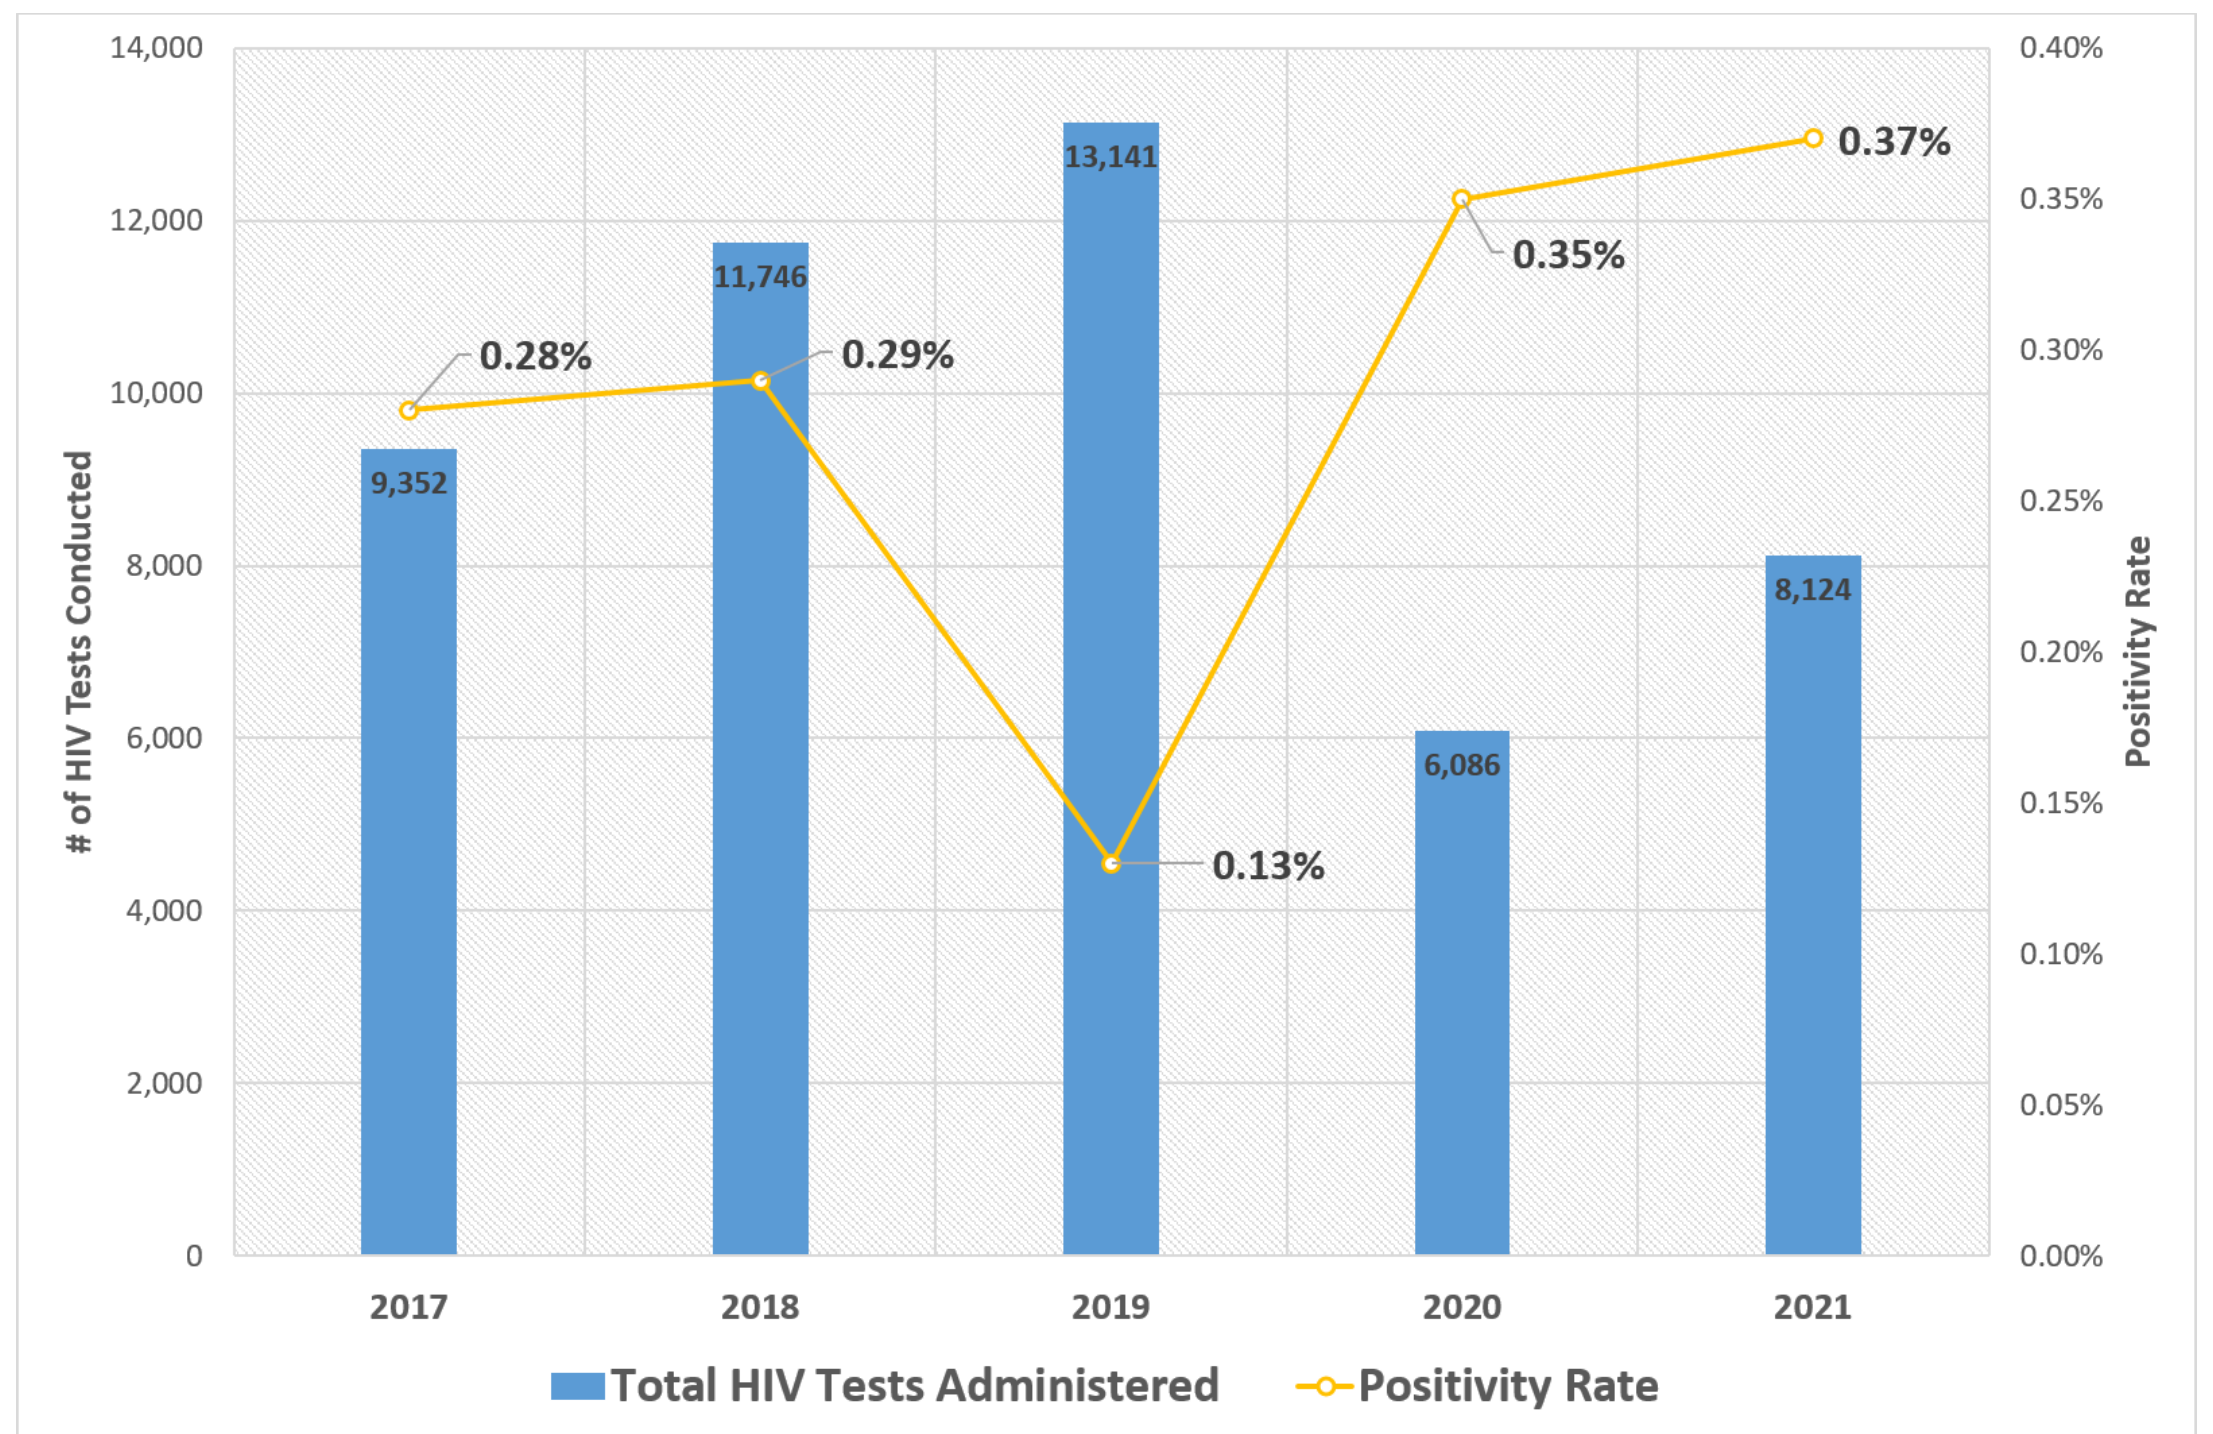

ITS HIV Testing and Positivity 2017 - 2021

The Integrated Testing Services (ITS) program administered 8,124 HIV tests across 12 participating agencies in 2021.

This represents an increase of 33% from 2020, and is 16% under the 5-year average of 9,690 tests per year.

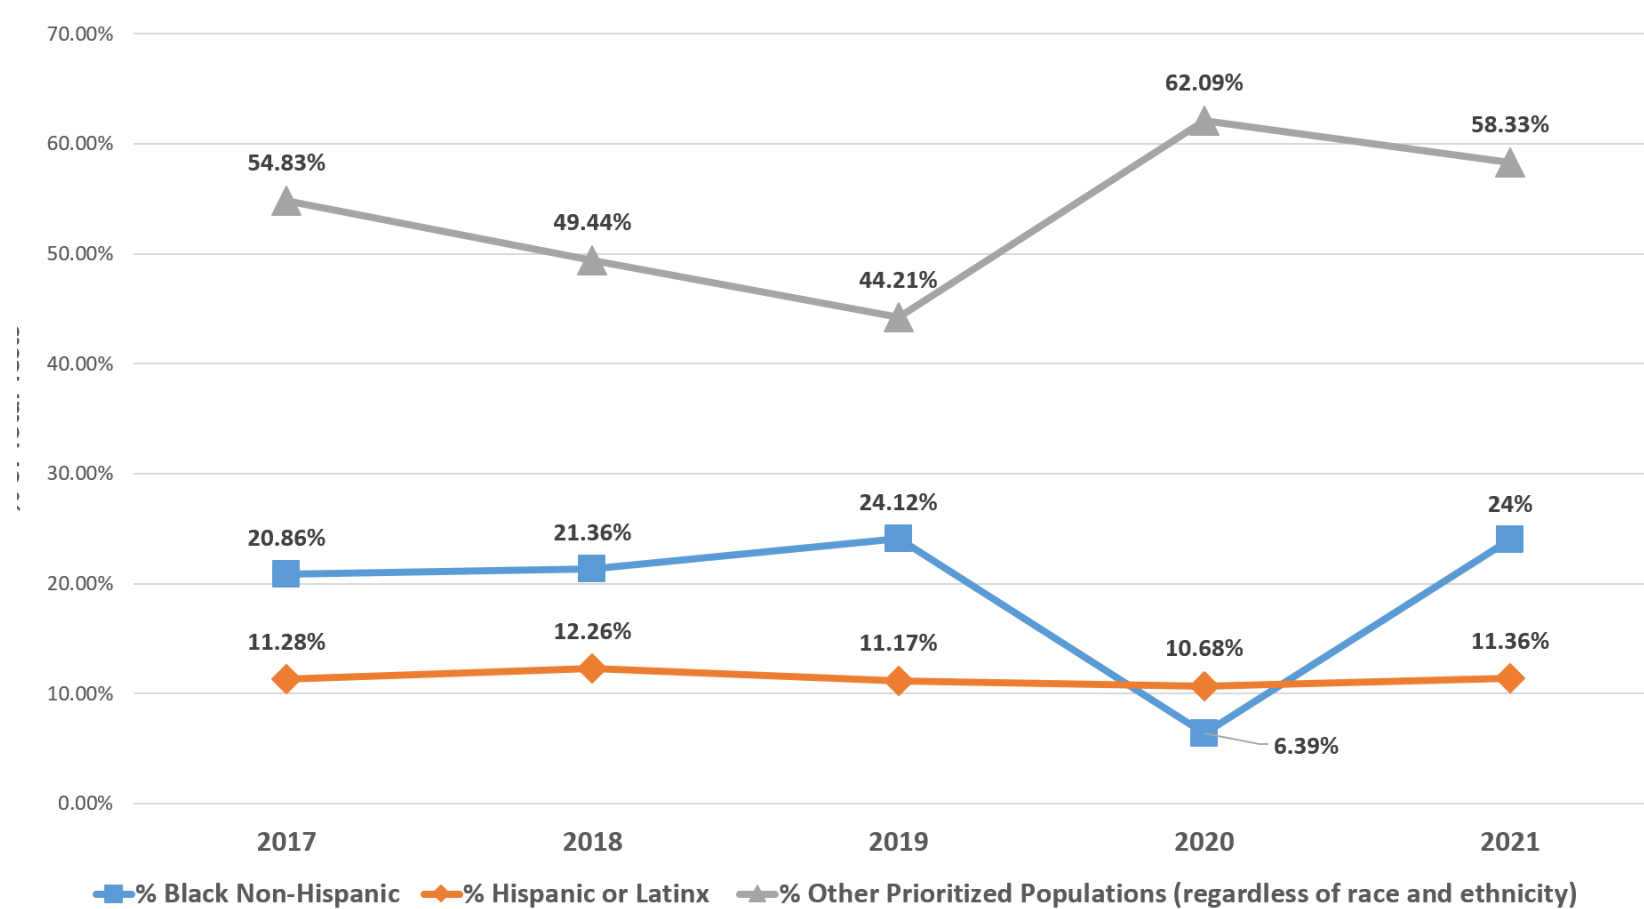

While total testing numbers have not yet returned to pre-pandemic levels, the number of newly diagnosed people living with HIV increased slightly resulting in a 0.37% positivity rate.

These data indicate that ITS projects are making progress towards service restoration while continuing to engage prioritized populations and identify previously undiagnosed individuals.

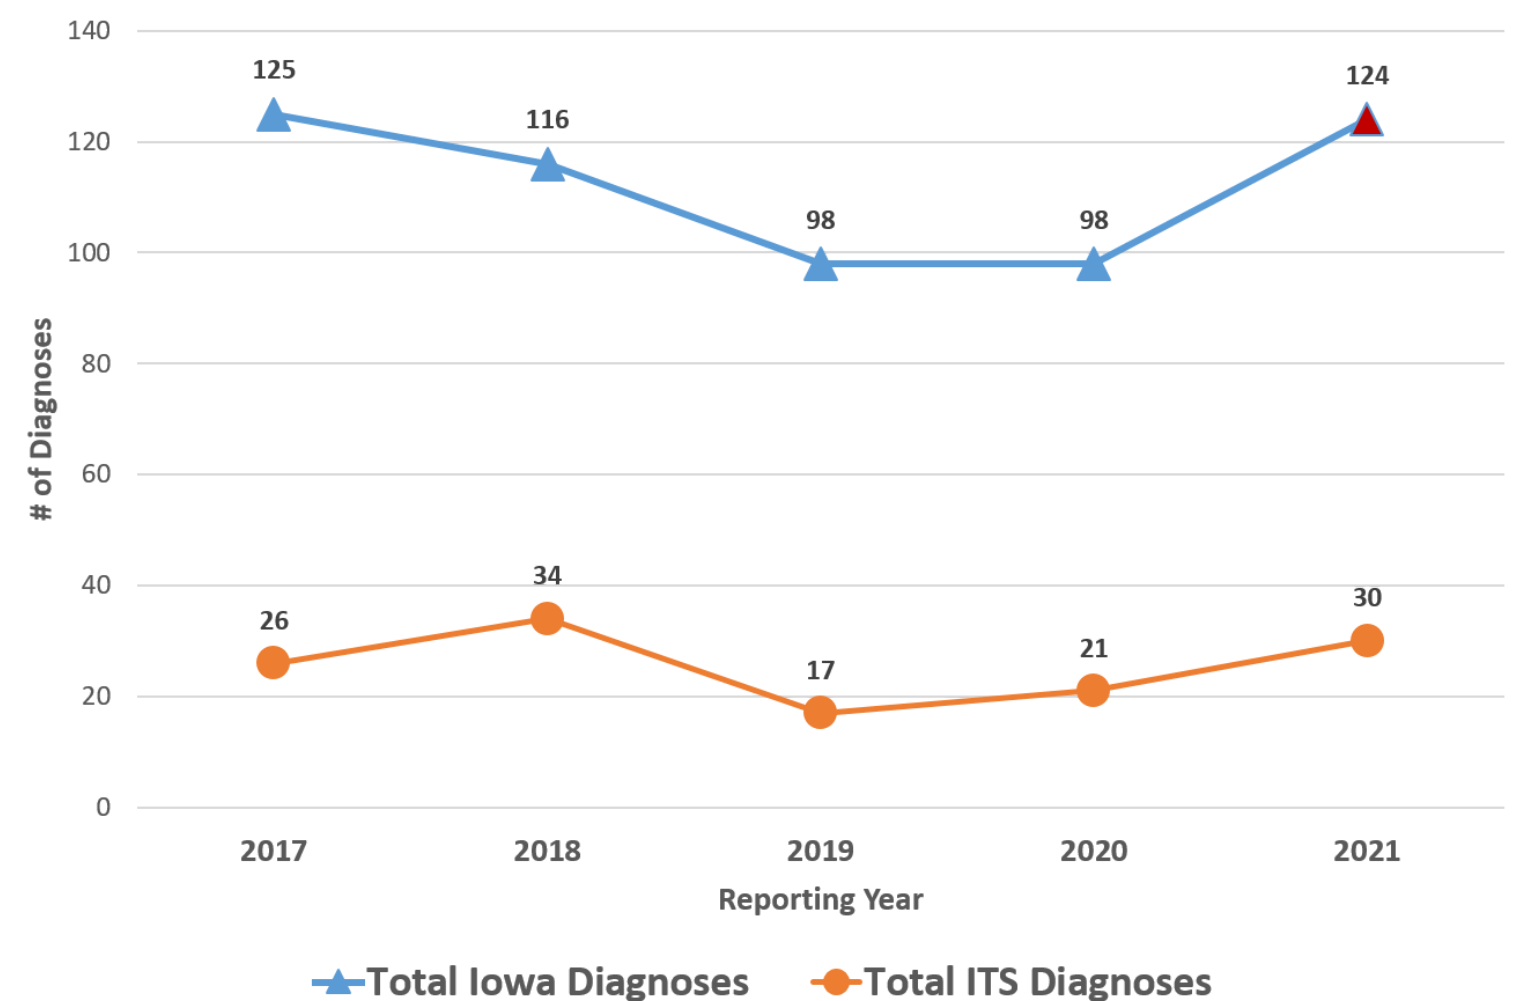

*Data are not de-duplicated. Numbers represent tests and not unique individuals.

ITS HIV Testing by Population 2017 -2021

ITS HIV Diagnosis vs State Totals 2017 -2021

*2021 state total displayed above were not final at the time of release. Final numbers may be revised.

The percentage of total tests administered to prioritized populations (regardless of race and ethnicity) decreased from 62% in 2017 to 58% in 2021, slightly above the 5-year average of 52%. **The percentage of total tests administered to individuals who reported Hispanic/Latinx ethnicity (regardless of race) was stable at 11% in 2021 (compared to 11% in 2020 and a 5-year average of 11%).** During the same time period, **the percentage of total tests administered to individuals who identified as Black or African American (non-Hispanic) returned to pre-pandemic levels, with 24% of all HIV tests being administered to this population in 2021 compared to 6% in 2020 and a five-year average of 21%.** The proportion of newly diagnosed individuals living with HIV in Iowa identified through ITS program activities increased slightly to 24% of new diagnoses in 2021 (as compared to 21% in 2020 and a five-year average of 23%).
