Earnings Down – But Take-Home Pay Up!

Although gross earnings for workers in lowa's private sector were down an average of \$1.22 a week during May, their take-home pay, after federal and state taxes, rose from 87 cents to \$3.13 a week, depending upon the number of dependents claimed. All this is due to current provisions contained in the 1975 tax-cut bill, signed into law on March 29, 1975.

As a result of this bill, several changes have been made in federal tax regulations for calendar 1975: the low-income allowance has been raised from \$1,300 to \$1,600 for single workers, and to \$1,900 for married workers filing joint returns; and the standard deduction has been increased from 15 to 16% with a maximum of \$2,300 (\$2,600 for married workers).

Also added is a special tax credit of \$30 for each allowable exemption.

Employers began withholding at the new rates starting in May, 1975. This is reflected in the current spendable earnings figures for Iowa as shown in Table VII.

The increase in the low-income allowance will mean an average tax savings of about \$1.04 a week for the single worker making more than \$49.32 and less than \$192.31, and \$1.80 a week for the worker with three dependents making more than \$110.72 and less than \$228.37.

The increase in the standard deduction, from 15 to 16%, will mean an average tax savings of about 0.24% a week for the single worker making between \$192.32 and \$276.44, and about .19% a week for the worker with three dependents earning between \$228.38 and \$312.50. For workers with earnings higher than these maxima, average tax reductions will be about \$1.62 and \$2.68 a week, respectively.

The addition of the special tax credit will mean an average tax saving of about \$.55 a week for the single worker, and about \$2.21 a week for the married worker with two dependent children.

Below is a comparison chart showing the net changes in tax liabilities for nonsupervisory employees in the private sector in lowa:

	Gross Weekly			Weekly Earning Dependents	ngs			Weekly Earnin th 3 Dependen

^{1/} Revised to most current information available at publication. Data include all full and part-time wage and salary workers employed during the week containing the 12th of the month. Proprietors, self-employed, domestic workers and the armed forces are excluded. Detail may not add up to total due to rounding. (March, 1974 benchmark levels)

__labor market briefs

Total **EMPLOYMENT** on a residential basis showed 36,700 more workers on the job than in April . . . 1,308,800 employed in May compared to 1,272,100 during the preceding month. Employment in May 1974 was 1,296,900, a count of 11,900 under the current mark. Nonag wage and salary jobs for May tallied 1,008,000 on a place of work tabulation. Nonmanufacturing increases in trade (eating and drinking places), services (amusement and recreation) and local government worked to push job totals up in May . . these summer related boosts covering a manufacturing loss to raise total nonag 6,000. Numerous labormanagement disputes lowered nonmanufacturing's contract construction employment level. Manufacturing continued to fall substantially below year ago tallies . . . 15,500 under the May 1974 count. Durables declined 1,600 . . . resulting from some strike activities and general slowdowns. In nondurables, however, moderate gains appeared . . mainly through seasonal increases in food and kindred products.

Total **UNEMPLOYMENT** for May fell seasonally from 80,600 in April to 71,000 . . . a drop of 9,600. On the other hand, joblessness showed a sizable upswing of 39,500 from last May's jobless count of 31,500. Iowa's seasonally adjusted **UNEMPLOYMENT RATE** was estimated at 6.2% . . . up from the April rate of 5.9% . . . indicating the continuing economic trend. Iowa's unadjusted rate—aided by seasonal upturns—registered at 5.1% . . . compared to April's 6.0%. In May 1974, the seasonally adjusted rate was 2.9% . . . the unadjusted rate was 2.4%.

The civilian LABOR FORCE—the combined totals of employed and unemployed workers in lowa—increased by 27,100...numbering 1,379,800 compared to 1,352,700 in April...and 1,328,400 during last May.

The state's **UNEMPLOYMENT INSURANCE** (UI) program paid \$7,794,107 to jobless workers . . . over \$3 million (\$3,369,182) below April's payments of \$11,163,289 . . . a 30.2% drop . . . but a big 270.8% increase over the May 1974 UI payments tally of \$2,102,089. May's average weekly UI payment was \$68.97 . . . compared to \$69.60 in April . . . \$60.14 during last May. Payments dipped in all industries . . . the largest downswings occurring in construction, 54.8% . . . mining, 59.6% . . . transportation, 36.1% . . and trade, 26.9%. In the survey week, 29,858 lowans filed for UI payments . . . a decrease of 6,780 from the 36,638 who filed in April. Occupationally, structural work showed the greatest downturn of workers applying for payments . . . 3,044 this month compared to 6,084 in April.

HOURS and EARNINGS: A shorter workweek influenced the total earnings picture statewide . . . as well as in five out of seven of the major labor areas . . . where fewer hours were worked. Earnings were off 1¢ an hour. In manufacturing, nonelectrical machinery experienced job cuts . . . raising hourly earnings . . . but lowering the workweek. Manufacturing's other durables was one of the few industries in the sector to have a longer workweek . . . lengthened after the settlement of large labor-management disputes. The largest hours and earnings increase was in newspapers. Construction strikes in nonmanufacturing slowed advances . . . strike areas plus others adding large numbers of lower paid workers drove earnings down 12¢ an hour . . . but lengthened the workweek.

In the **TURNOVER** area, accession rates are still lagging behind year ago levels . . . however, they have improved from April. Over the month, separations lowered with total quits remaining unchanged and layoffs declining slightly. In contrast to a year ago, over four times as many workers experienced layoffs . . . while only about half as many quit their jobs . . . and there were about a third as many new hires. Total accessions fell to around half last year's level.

WHAT'S UP AHEAD? . . . At this writing, some evidence of an upturn is evolving, but lowa's economic and employment conditions continue sluggish. Manufacturing hiring lags with layoffs still occurring . . . with the hiring that is taking place mainly involving recalls. Most construction workers are on the job but the industry is operating below normal. Worker surpluses are numerous, shortages appearing only in highly skilled, specialized occupations. Although a brighter outlook seems to be shaping up, would advise careful planning for the long haul.

^{2/} Includes ordnance & accessories, instruments & related products and miscellaneous manufacturing.

^{3/} Includes textile mill products, petroleum & coal products and leather & leather products.

Latest month's data is preliminary. Detail may not add up to total due to rounding. Council Bluffs and Davenport areas include lowa portions only. * Data no

* Data not available in time of publication. (March, 1974 benchmark levels)

1/ Includes unemployed and employed individuals. Establishment employment data is adjusted to commuting, multiple job-holding, and unpaid absence patterns.

3/ Includes all full and part-time wage and salary workers, excluding domestics, who were employed or involved in a labor-management dispute during the week including the 12th of the month.

2/ Includes nonagricultural wage and salary; self-employed, unpaid family, and domestic workers; and agriculture. 4/ Includes nonagricultural self-employed persons, unpaid family workers, and domestic workers in private households.

5/ Data for CETA programs in these areas are based on a "BLS census share" method and are not technically comparable to figures published here.

1/ Estimates are based upon a sample of full and part-time production and related employees, who worked during or received pay for the payroll period which includes the 12th of the month. Besides changes in basic hourly and incentive wage rates, average hourly earnings reflect such variable factors as overtime premium pay, late shift work, and changes in output of workers paid on an incentive basis. They also reflect changing employment of workers between relatively high-paid and low-paid work, and full-time and part-time status. Revised to most current information available at publication.
