## Statistics Department

## THE WHOLESALE PRICE INDEX war 27198

The oldest continuous statistical series published by the Bureau of Labor Statistics-and one of the oldest produced by the federal government-is the Wholesale Price Index (WPI). The WPI first appeared in 1902 and covered the years 18901901.

The origins of the index are associated with a resolution of the U.S. Senate in 1891 which authorized the Senate Committee on Finance to investigate the effects of tariff laws "upon imports and exports, the growth, development, production and prices of agricultural and manufactured articles at home and abroad."

The initial index published in 1902 included from 250 to 261 commodities. Since that time, many changes have been made in the sample of commodities used, the base period investigated and the method in which the index is calculated.

Today, the Bureau of Labor Statistics collects nearly 9,000 price quotations each month, covering approximately 2,700 commodities. This information is obtained from reports submitted by individual producers, supplemented by statistics appearing in trade publications or coming from other government agencies.

## An Estimate of Price Changes

In essence, the WPI is a statistical estimate of price changes for goods sold in primary markets throughout the United States. The index records price changes of commodities as they move through all stages of processing-crude, intermediate and finished. All commodities sold commercially in these markets are represented, including those imported for sale. The survey covers these goods at each level of processing . . . the output of industries classified as manufacturing, agriculture, forestry, fishing, mining, gas and electricity and public utilities.

As a result, the WPI has become one of the leading indicators of the direction consumer prices will take in future months-and, in turn, changes in the rate of inflation.

The following graph illustrates the relationship between the prices paid by consumers for commodities in the retail market and the prices paid for commodities in the wholesale market.

# LABOR MARKET BRIEFS 

## The National Scene

The seasonally adjusted jobless rate of $6.4 \%$ for December marked the first time since October 1974 that the national rate has registered below $6.6 \%$. Total employment showed a substantial gain for the second straight month . . . the December level of 92.6 million workers on the job up 410,000 over the preceding month. Men scored major employment increases . . . while women and teenagers registered smaller gains. Employment in blue collar and service work was strong . . . leading other job categories.

Unemployment dropped sharply from November . . . down 480,000 . The most significant decrease occurred among workers who had lost their jobs sometime during the previous months . . . and had been employed in December. Substantial declines in joblessness lowered the jobless rate for men to $4.7 \%$ . . . decreased the women's rate to $6.7 \% \ldots$ and dipped the teenager rate to $15.4 \%$. Unemployment among blacks fell from $13.8 \%$ in November to $12.5 \%$ in December.

Prices for finished goods rose at an annual rate of $8.7 \%$. . nearly double the November rate. The wholesale price index for December was 200.0 compared to 199.2 for November. Consumer prices increased at an annual rate of $4.9 \%$. . the biggest jumps in new cars, furniture, floor covering and medical care. The consumer price index for December was 186.1.

Personal income continued to climb . . . a hike of 1.1\% over the November mark . . . an annual rate of \$1.618 trillion . . . this in spite of reduced wages and salaries resulting from the coal strike.

Industrial production-affected by the coal strike-grew only $0.2 \%$ in December. Nevertheless, production output continued to increase moderately ... factories operating at 83.0\% capacity. But business-particularly retailers-kept a watchful eye on inventories . . a major reason why total output of goods and services for the 1977 fourth quarter slowed considerably from the first quarter growth rate of $7.5 \%$-yet grew at an annual rate of $4.2 \%$.

Still to be fully determined is the effect severe weather conditions in the eastern two-thirds of the nation will have on the national economy. Of great concern is the nationwide coal strike which could have serious reprecussions if it continues . . . business and industry possibly forced to curtail production . . . or even shut down . . . due to shortages of coal produced energy.

## ... And in Iowa

The state's economic picture dimmed as the December seasonally adjusted unemployment rate rose $0.1 \%$ from the

November level . . . to 3.0\% of the labor force. The unemployment count was 7,700 more than in November . . . but was 8,900 under a year ago.

Total employment was 33,300 below the November figure . . . but was 22,800 more than the December 1976 tally. Employment changes from November were seasonal. . . a continued decline in agriculture and construction . . . an upsurge in retail trade . . . and a show of strength in manufacturing.

The December drop in nonfarm employment stemmed primarily from the seasonal slowdown in contract construction activity. The 5,400 employment decline was the largest for the industry in this decade . . . yet construction employment remained strong at 44,600. Only in December 1974 was the construction employment figure higher . . . registering at 46,300.

Retail trade employment reached an all-time high of 215,400 . . up 4, 100 from November. Wholesale trade experienced the usual downturn that occurs at this time of year. Cold weather slowed agricultural and other outdoor employment . . . such as scrap metal collection. Stone, clay and glass also felt the seasonal employment dip. However, as shown by a random sample survey, weekly earnings in the industry were up $\$ 21.58$ from a year ago.

Settlement of labor-management disputes that involved 800 employees in farm machinery and equipment helped to boost the number of employed in the machinery except electrical sector. Average hourly earnings were up $16 \phi$ in transportation equipment due to wage rate increases. Seasonal layoffs by poultry dressing and packing firms in meat packing brought that industry's layoff rate to 71 per 1,000 workers and total separations to 30 per 1,000. A meat packing strike affecting 200 workers was arbitrated . . . while a still larger strike continued.

A partial shutdown in the wet corn milling industry kept employment in grain mill products at a lower level this year than last. Less overtime brought average weekly earnings down in newspaper publishing.

The outlook for the next few months may be clouded by an anticipated employment drop in farm machinery manufacturing and in electrical equipment. A possible decline in the demand for farm equipment due to falling farm income and the exodus of a major electronic firm from the state are expected to have a negative effect on the lowa economy.

## EMPLOYERS' PAGE

## the advantages of reverse referral

The man entered the plant lobby and went directly to the receptionist's desk.
"I'd like to apply for a job," he told her.

The receptionist smiled up at him. "We no longer take applications here," she said. "All applications for employment with our firm are now filed with the local Job Service office." She handed him a card. "That's the Job Service office address. Just give them the card when you go in to register. They'll help you fill out an application. You'll then be considered for the current or future openings we may have."

The man glanced at the card with a puzzled expression. "This is something new?" he asked.
"Not really. We've been using this system of registering our walk-in applicants for some time. It's called 'reverse referral.' Instead of Job Service sending workers to us, we're referring our applicants to them. And when we need applicants, Job Service will refer them back to us. Works out fine. Better for us . . . saves us a lot of time and record keeping. Better for you, too . . . since Job Service can offer you many kinds of employment assistance . . . even can expose you to job openings with other employers."
"'But what if I'm only looking for a job here-with your firm?"
"Then you simply specify this on the application you fill out at Job Service. That way you'll only be notified by Job Service when we have openings you're qualified to hold."

The above scene is frequently repeated in a growing number of firms in lowa-actually, every time a job seeker walks in looking for work. Without exception, the applicant is referred to Job Service.

This reverse referral system affords employers like yourself the advantage of not heving to interview every applicant who walks in on the off chance he or she might be someone your firm can use in the future. Also eliminated are the bookkeeping and filing chores that are a part of the initial application-taking procedure.

The system is an agreement between you-the employerand Job Service of lowa wherein you never register walk-in applicants, but refer them instead to be interviewed and registered for work. You're spared the task of initially processing these applicants, yet are assured of receiving a satisfactory number of qualified workers to fill your job openings as they occur.

Posters and explanatory cards provided by Job Service will direct all walk-in job seekers to the state agency office in your community . . . quickly and efficiently.

## How the System Works

Each applicant you refer to Job Service is interviewed and classified according to work qualifications. A work application is prepared-yours or Job Service's, according to your preference-which is placed in a file reserved for your firm.

When you have job openings, you notify Job Service of the number and qualifications of the workers you wish to interview. Job Service will contact suitable applicants from your file and refer them to you. Should the file reserved for your firm contain no qualifying applications, referrals will come from regular Job Service files.

- You save:
- time spent in carrying out the registration procedure-hours of valuable effort that can be devoted to other things.
- expense of advertising, recruiting and screening for proper selection of employees.
- You receive:
- qualified applicants as you need them, carefully screened to meet your job qualifications.
- applicant interviews scheduled as you want them, to suit your timetable.
- assurance of compliance with civil rights, mandatory listing and other regulations.
- You gain:
- freedom from preliminary interviewing procedures.
- prompt, professional service in filling your job openings . . . at no cost.
- peace of mind.

For more detailed information about becoming a part of the reverse referral system, contact your local Job Service office.

Latest month's data is preliminary. Detail may not add up to total due to rounding. Council Bluffs and Davenport areas include lowa portions only.
*Data not available at time of publication. (March, 1975 benchmark levels)
1/ Includes unemployed and employed individuals. Establishment employment data is adjusted to commuting, multiple job holding, and unpaid absence patterns.
2/ Includes nonagricultural wage and salary, self-employed, unpaid family, domestic and agriculture workers.
$3 /$ Includes all full and part-time wage and salary workers, excluding domestics, who were employed or involved in a labor-management dispute during the week including the 12 th of the month.
4/ Includes nonagricultural self-employed persons, unpaid family workers and domestic workers in private households.
5/ Data for CETA programs in these areas based on a "BLS census share" method and not technically comparable to figures published here.

$1 /$ Estimates based upon a sample of full and part-time production and related employees, who worked during or received pay for the payroll period which includes the 12 th of the month. Besides changes in basic hourly and incentive wage rates, average hourly earnings reflect such variable factors as overtime premium pay, late shift work, and changes in output of workers paid on an incentive basis. They also reflect changing employment of workers between relatively high-paid and low-paid work, and full-time and part-time status. Revised to most current information available at publication. (March, 1975 benchmark levels) *Data not available

1/ Figures presented are expressed as a rate per 100 employees. *Less than . 05.

Unemployment Rates
December 1977

[^0]:    1/ See footnote - Table III

    * Data not available.

[^1]:    1/ Insured unemployed counted during the week including the 12 th and based on a survey of claims filed during the week including the 19 th.
    *Less than 5 per cent of total insured unemployed.

[^2]:    1/ Revised to most current information available at publication. Data includes all full and part-time wage and salary workers employed during the week containing the 12 th of the month. Proprietors, self-employed, domestic workers and the armed forces are excluded. Detail may not add up to total due to rounding. (March, 1975 benchmark levels)
