Characteristics of the Insured Unemployed

Wapello County

CHARACTERISTICS OF THE INSURED UNEMPLOYED

NOVEMBER 1977

Ottumwa, Iowa Labor Area

WAPELLO COUNTY

A Labor Market Information Publication of the

IOWA DEPARTMENT OF JOB SERVICE

affiliated with the

Employment and Training Administration

U. S. Department of Labor

Characteristics of the Insured Unemployed

This quarterly publication is designed to disseminate information on the characteristics of the insured unemployed to manpower planners, officials and other users of labor market information concerned with the problems of the unemployed. An unemployment insurance (U.I.) claimant is an individual who has been determined monetarily eligible for benefit payments under State Job Insurance programs and whose benefit year or compensation has not ended and who has not exhausted his benefit payments under Federal U. I. Programs. The publication is concerned primarily with those under the State Job Insurance programs.

Since this publication is directed toward planners, we would appreciate any suggestions you may have that would be useful in providing the most useful and complete information available. Any questions or suggestions should be directed to the:

CHARACTERISTICS OF THE INSURED UNEMPLOYED

Data for the Quarter Ending September 30, 1977

General Economic Conditions

Ottumwa's economy continued to expand through the Third Quarter of 1977. Led by manufacturing, service and government, total employment increased by more than 200 workers. During this same period, agriculture dropped 150 seasonal workers.

Manufacturing gains were spread throughout the industry. The addition of one new plant - Diamond Industries - and expansions in plant size and employment by existing plants were the main thrust behind these gains. Manufacturing employment did show some fluctuation in mid-summer with vacation layoffs.

Both service and government received most of their quarterly gains from educational services, where school workers laid off last June were re-hired in late August. Service also recorded gains in the health service field.

Ottumwa's unemployment rate declined to below 4.0 for the first time in five years during third quarter, 1977. The jobless rate for July was slightly higher than for June (5.0, up from 4.7). By September, however, the local unemployment rate had dropped to 3.7, the lowest recorded since late 1972 - prior to the Morrell meat packing plant closing. Students leaving the labor force combined with the recall of workers on vacation layoffs contribute to the unemployment decline.

Characteristics of the Insured Unemployed

The number of Wapello County residents receiving job insurance benefits under the Iowa unemployment insurance program during third quarter 1977 continued to decrease from the previous two quarters. The number of claimants in July stood at 239, down from 625 in January.

During the third quarter, the number of insured unemployed peaked in August at 335, dropping to 224 in September - a 33.1% decrease. The major factor behind this middle of the quarter peak was the weather. Excessive rains curtailed much outdoor work and resulted in temporary layoffs in related industries. Another factor was vacation shut-downs. In many cases, probationary employees are not eligible for vacation pay and are eligible for unemployment insurance.

The largest category of insured unemployed workers continues to be manufacturing, accounting for more than a third of all. This is understandable since manufacturing is also the largest category of employed workers. Contract construction depends on good weather and this is evident by the drop in insured unemployed from 220 last March to 25 in September.

The number of female claimants has held relatively stable since the beginning of 1977 and continues to do so. The bulk of the female workers are employed within service and trade, with males dominating manufacturing and contract construction. This indicates the relative stability of trade and service jobs.

The number of chronic unemployed (those out of work 15 weeks or longer) has fallen to the lowest level recorded in 1977 - 73 in September. Those out of work 5-14 weeks continue to account for nearly half of the local claimants.

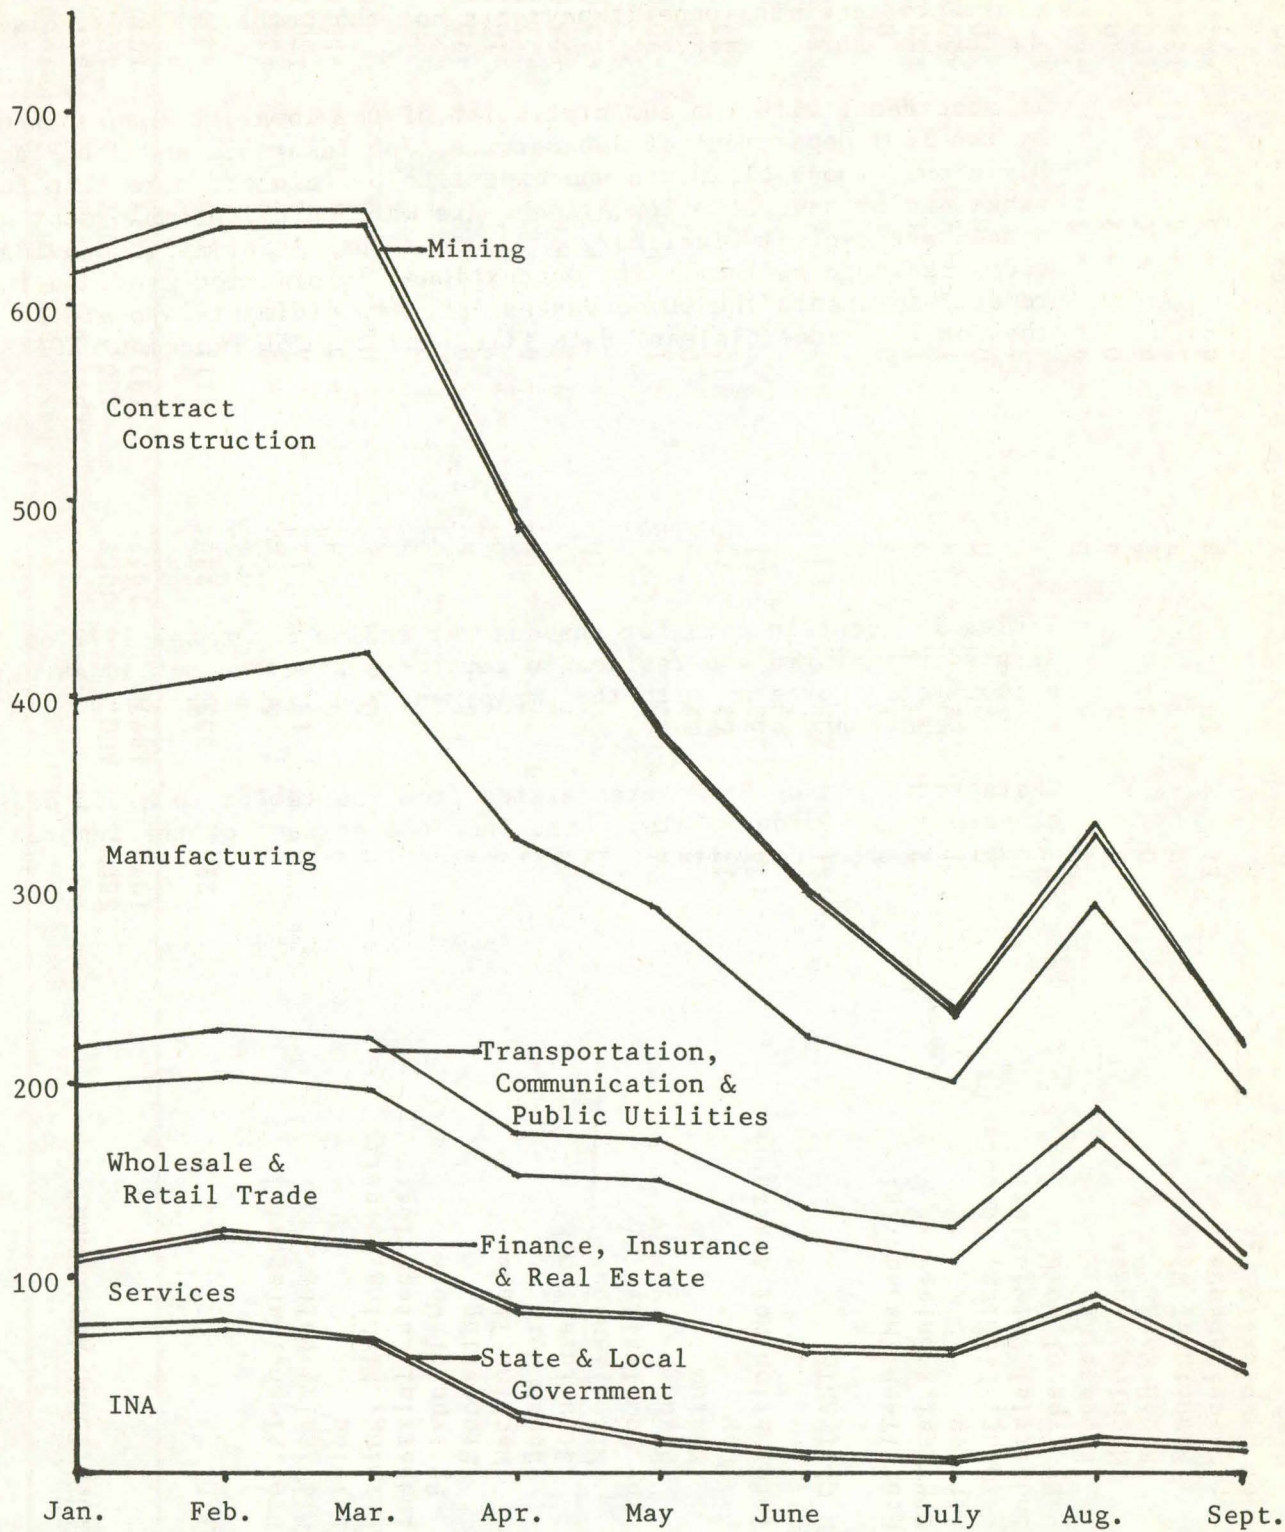

Since the number of insured unemployed represents approximately half of the total local unemployed tally in an average month, their characteristics can be useful for operational planning by vocational educators, labor, business, local planners and other community leaders.

OUTLOOK

The outlook for fourth quarter 1977 is for the number of insured unemployed to increase. When this increase will occur is dependent upon the completion of construction projects and the onset of inclement weather. Manufacturing employment should continue to edge upward with expected plant expansions, thereby leaving the number of manufacturing related insured unemployed at or below the current level. Trade and service normally gear up for the holidays during this period, providing at least temporary jobs for some insured unemployed individuals.

INDUSTRY ATTACHMENT OF THE INSURED UNEMPLOYED IN WAPELLO COUNTY

January - September 1977

TECHNICAL NOTES

The data presented in this report represents characteristics of job insurance claimants who filed claims for benefits covering the survey week containing the 12th of the month. The data represents individual claimants receiving benefit payments not the number of weeks claimed during the survey week.

In accordance with the administration of the Iowa job insurance program by the Iowa Department of Job Service, Job Insurance and Job Placement Divisions, those claimants who expect to be laid off more than four weeks and/or have no union attachments which provide employment assistance have 6-digit Dictionary of Occupational information provided in codes assigned to them. The occupational information provided in this report represents the DOT codes assigned to claimants who are in both the Job Insurance claimant data files and the Job Placement ESARS data files.

SUPPORTING STATISTICAL TABLES

Tables 1-7 contain data for the quarter ending September 1977 on the insured unemployed who resided in Iowa. Data were compiled as part of a cooperative program with the Employment and Training Administration, U. S. Department of Labor.

Characteristics by Race were deleted from the tables to avoid disclosure of individual data. Less than one percent of the insured unemployed were nonwhite.
