REF. NO.

Mr. Bill Kendall, Director  
Office of Driver License  
Iowa Department of Transportation  
Lucas Building  
Des Moines, Iowa 50319

Dear Bill:

The Office of Transportation Research is pleased to forward the final report of An Analysis of Driver License Office Data Bases.

The report examines existing data and makes recommendations for its use in evaluation of the Office of Driver License service to the public.

Your assistance and the assistance of Jim Fischer is much appreciated.

Sincerely,

*Steve Kadolph*

Steve Kadolph  
Statistical Research Analyst  
Office of Transportation Research

## I. EXECUTIVE SUMMARY

The purpose of this report is to provide the Driver License Office with a method of using existing data to evaluate the service driver license teams are offering to the public. Also dealt with are alternatives to existing data gathering techniques and data not currently available.

The primary weakness found in existing driver license data was the manner in which it was collected. All of the data, with the exception of the new driver license master file, was available only from hand calculated records. Upon receipt of the data, the Office of Transportation Research entered it into a computer file via its terminal. These computer files were then manipulated by use of Statistical Analysis System (SAS), a software package, and computer listings showing the data arranged in various ways were developed. Many of the computer listings used in this report, and some that were not, were supplied to the Driver License Office as soon as they were completed. Several listings were also generated at the request of the Driver License Office.

This report will deal with techniques for using existing data to evaluate the operations of each driver license location, but will not make recommendations as to the specific operations of driver license teams. While it is not impossible to develop a model that would generate hypothetical optimum locations and hours of operation for these locations, it was considerably beyond the time frame of this project to do so. It was not possible to develop several key parameters, such as minimum and maximum hours of operation per location and a desired level of productivity based on average licenses issued per hour. A technique was developed to evaluate the effectiveness of each location by selecting a standard of operation based on average licenses issued per hour.

### Findings of the Study:

#### April 1980 Survey Data

This survey contained information on the hourly operations of the driver license locations and the number of people waiting when a location opened. Using the computer the following manipulations of the data were made:

1. The average number of licenses issued per hour for each hour the station was open were calculated for permanent, itinerant locations, and all locations.
2. The number of people waiting by opening time by locations for each day were computed.

The following observations were made based upon the above calculations:

1. The itinerant locations showed very little difference in the average number of licenses issued on a daily basis.
2. Permanent locations issued almost three licenses per hour more on Tuesday than the next highest day (Saturday).

3. As opening times became later, the number of people waiting increased.
4. Tuesday, when all locations open at 10:30 a.m., accounted for 42 percent of the people who were waiting.
5. The number of people waiting on Tuesday caused the average licenses issued per hour for the first two hours of Tuesday to be high when compared to the rest of the days and hours.
6. The least productive hours were the last hour of the day and the first hour, respectively, with the exception of Tuesday:

The following recommendations are made:

1. By using the computer listings supplied to the Driver License Office, permanent locations with high volumes on Tuesday and a large number of people waiting when a location opens can be found. Based on volumes during the rest of the week, the possibility of remaining open some evening other than Tuesday should be evaluated to more evenly distribute the week's work load.
2. While this survey gathered useful information, the amount of time and effort involved in gathering it on a continual basis would probably not be worthwhile. An alternative for the permanent locations will be discussed in the chapter dealing with the newly developed computer driver license master file.
3. Such a compilation of data on a yearly or less frequent basis would, however, be of value. The Office of Transportation Research would be willing to assist the Driver License Office in setting up such a survey and analyzing it.

#### January - October 1980 Monthly Data

Because the driver license master file was not available, January - October information was analyzed in its place. The following information, by location, was available from this monthly summary data:

1. Average hourly licenses issued;
2. Number licenses issued;
3. Driver tests given;
4. Motorcycle tests given;
5. Written tests given.

Originally, providing for the optimum operation of a location was to be done by establishing minimum and maximum hours of operation and licenses issued per hour. Because of the complex interaction of driver license locations as listed in the section dealing with the January - October 1980 data base, this was not feasible. Instead, the following formula based on average licenses per hour was developed.

$$\text{OPT HOURS} = \frac{\text{ATOT}}{X} - \frac{\text{ATOT}}{\text{AVLH}}$$

- X = Standard work rate of licenses to be issued per hour  
ATOT = Average licenses issued monthly  
AVLH = Average licenses issued per hour for the location  
OPT HOURS = Change in monthly hours required for a location to issue X licenses per hour.

Using this formula, monthly adjustments in the hours of operation of each location can be calculated. The section of this report dealing with the January - October 1981 data shows a sample calculation based on a standard of 10 licenses/hour. The January - October 1980 data showed an average of 9.75 licenses per hour were issued.

This data is essential since it contains basic information on the operation of each location. Because it was hand compiled and hand totaled, its usefulness is extremely limited. To extract listings such as the Office of Transportation Research has compiled would require an inordinate amount of time. To facilitate manipulation of the data the Driver License Office should, in conjunction with Data Processing, develop a computer file and programs to manipulate it to provide information similar to that provided in this report.

#### Cost Data:

This section of the report contains budget costs for the operation of each driver license location. A sample evaluation is made in this section of the impact of closing the Keokuk location. Based upon this sample calculation, it was determined that closing a location because of cost cannot be justified if the increased costs incurred by the public are considered. However, it may be cost effective to reallocate existing location's hours if the public's travel time can be reduced.

#### Driver License Master File

This file was originally scheduled to be ready for use on January 1, 1981; however, it will not be ready until June 15, 1981. In order to not delay this report, it was decided not to wait for this file. When the file becomes available, it will be analyzed and the results sent to the Driver License Office.

The Driver License Office should investigate with Data Processing the possibility of using this file to generate periodic reports showing driver license location activities. This would involve the addition of a field to each record that would identify each location and possibly other fields to identify items not currently contained in the file. If this is not feasible, or would not provide the needed information, then the possibility of building a separate computer file using the information from each of the two types of driver license forms should be investigated.

Another piece of information that could be compiled for on line locations is licenses issued for each hour. If hourly data is needed, the possibility of compiling the information from terminal entry operations should be investigated. Data from the April 1980 survey indicated that 39 percent of all licenses issued were issued from on line locations.

Information Not Currently Available:

Evaluation of the desirability of evening and Saturday service would require knowledge of why a person got his or her license then. A survey was conducted in July 1977 by Central Surveys, Inc., which in part asked for public opinion on evening and Saturday service. In this survey, 39 percent of the people said increased Saturday service would be more convenient and 48 percent said service later in the evening would be more convenient. For a discussion on why these numbers could be misleading see Appendix E. Based upon this survey the current Tuesday - Saturday schedule for most locations was started February 2, 1979. Although it would be useful to evaluate the public's use of this change in service, the data available makes any meaningful evaluation impossible. The information needed to make an evaluation would have to be gathered by taking a sample of those people who received their licenses in the evening or on Saturday.

The subsequent sections of this report deal with the various data bases evaluated.

## II. GENERAL INFORMATION ON DRIVER LICENSE OFFICE

Currently the Driver License Office operates 140 separate locations with 38 driver license teams. The following teams operate permanent locations in the listed cities:

<u>DL Team #</u>	<u>City</u>
2	Des Moines
3	Des Moines
29	Des Moines
40	Des Moines ( <u>Renewals Only</u> )
21	Cedar Rapids
41	Cedar Rapids ( <u>Renewals Only</u> )
6	Council Bluffs
8	Sioux City
14	Waterloo
18	Dubuque
23	Bettendorf
24	Iowa City
28	Marion
30	Davenport

These 14 permanent locations, plus Ames (DL Team #1), process driver license applications via remote terminals.

The remaining 24 DL teams account for 126 separate locations. The number of locations served ranges from two to nine per team. DL Team #1 operates in Ames as a renewal only station on the days when the examiner is in another location. Table 1 shows locations categorized by days of service. Days on which driver license locations are open are Tuesday through Saturday, with evening service offered until 7:00 p.m. at most locations open on Tuesday.

Table 1 Location by Type of Service

Days of Service	Number of Locations
1, 2, 3, or 5 days/week	88
Every other or every fourth week	30
Some kind of monthly service	21
Special	1
Total	140

Some kind of monthly service indicates that on a specific day and week of the month a location is open. The special location is Muscatine, which is open every week on Tuesday and Saturday and on the first, third, and fifth Wednesday of each month.

Table 2 shows the number of locations by days/week of service:

Table 2 Locations by Days/Week of Service

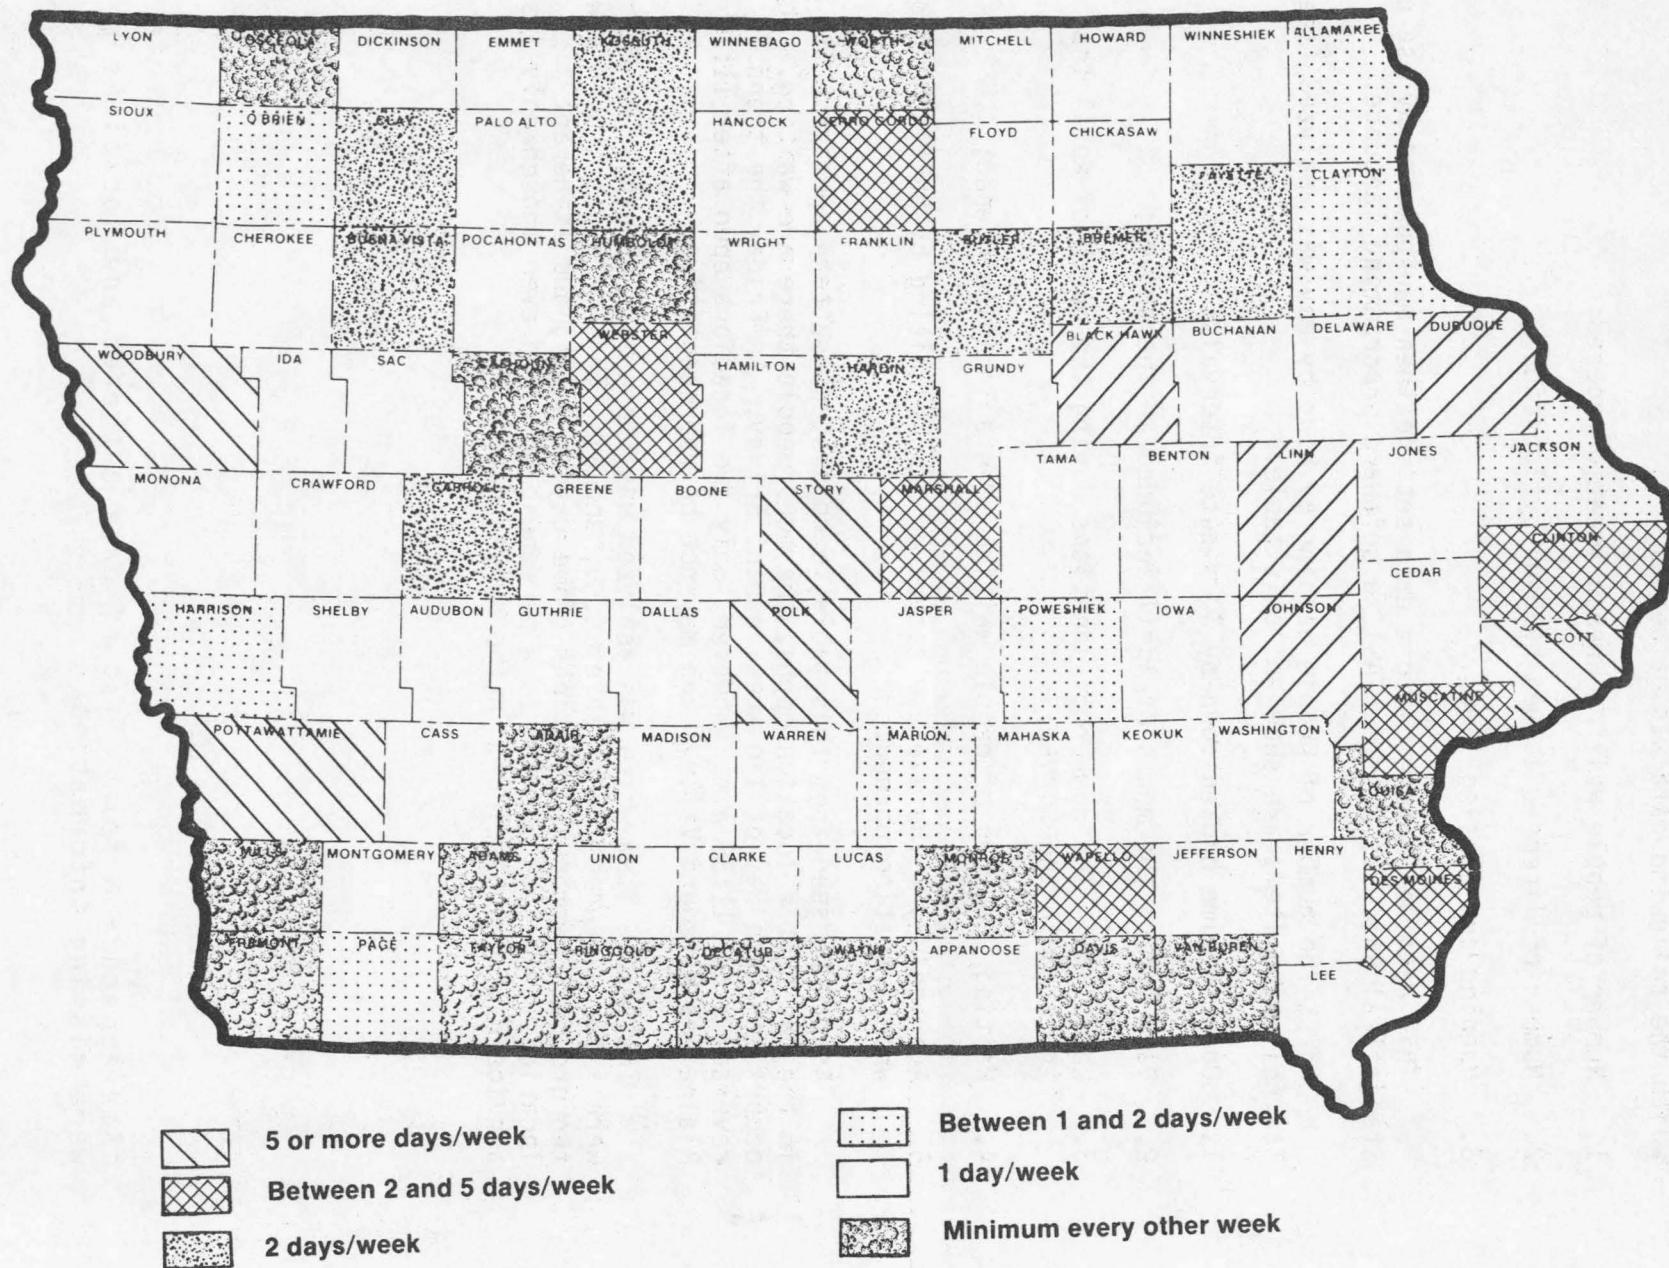

Days/Week	Number of Locations
5	15 <sup>1/</sup>
3	6
2 to 3	8
1	60
.5 to 1	36
< .5	15
Total	140

1/ Includes Ames

The following map (Figure 1) shows days of service broken down by county. It should be noted that locations are not always centrally located and may serve more than one county.

Section 321.186 of the Code of Iowa requires that service to a county be provided at no more than 15 day intervals. Currently 16 counties receive minimum service (every other week) and are shown on the county map (Figure 1).

**FIGURE 1**  
**COUNTIES BY DAYS/WEEK OF SERVICE**

### III. 1980 APRIL SURVEY DATA<sup>1</sup>

In April 1980 a survey was conducted by the Driver License Office, from which the following data was gathered:

1. Number of people waiting when a location opened;
2. Number of licenses issued by hour by location;
3. Opening and closing times.

This data was entered into a data set and then manipulated by use of Statistical Analysis System (SAS), a software programming language.

First the number of people waiting by hour by day was analyzed (see Table 3). The following items are shown on this table:

1. Opening time broken down by 30 minute intervals;
2. Days during the month of April included in the survey;
3. Locations - The number of locations during the month of April that were included in the survey;
4. Waiting - Number of people waiting when a location opened;
5. Average/Day - The average number of people waiting by half-hour groups when a station opened.

As can be seen from this table, a consistent pattern appears. The later in the day that a location opens, the more people there are waiting. This occurs for each day of the week, except Friday. On Friday the trend is reversed after 11:30 a.m. However, only two locations open after 11:30 (Belle Plaine and Missouri Valley) and may not be representative.

The second item which was analyzed was the number of people by hour that were issued licenses (see Tables 4, 5, and 6). This data was broken down into two groups. Permanent locations (five days a week), and itinerant locations. Ames is counted as a permanent location even though only its full service days were included in the survey data.

<sup>1</sup>See Appendix A for a list of data gathered and locations that were missing information.

4:00	10.1	7.2	6.5	6.9	--	7.8
5:00	8.6	4.0	1.3	11.0	--	8.4
6:00	5.0	--	--	--	--	5.0
Daily Average	10.2	9.4	10.1	9.8	9.9	9.9

Tables 4, 5 and 6 contain the following information:

1. Hours - 1 hour time increments from 8:00 a.m. to 6:00 p.m.;
2. Average licenses issued per hour by day;
3. Daily average licenses issued per hour;
4. Average licenses issued per hour for all the days.

Table 4 is for all locations. Tables 5 and 6 show the same data for permanent and itinerant locations, respectively.

The largest average issued licenses per hour occurred on Tuesday between 10:30 and 11:00, when all stations open between 10:30 and 11:00. Tuesday also accounts for 42 percent of the people who are waiting when a location opens. This fact probably accounts for the high number of licenses per hour in this time period.

Table 7 shows the number of licenses issued daily and the total number of hours per day for locations included in the survey:

TABLE 7  
TOTAL LICENSES AND HOURS BY DAY

DAY	Permanent Locations		Itinerant Locations		All Locations	
	Hours	Licenses	Hours	Licenses	Hours	Licenses
Tuesday	544	7,385	977.5	9,928	1,521.5	17,313
Wednesday	524	5,134	882.0	8,259	1,406	13,393
Thursday	416.7	3,792	702.8	7,119	1,119.5	10,911
Friday	385	3,876	659.2	6,429	1,069	10,305
Saturday	392.0	4,030	677.0	6,718	1,069	10,748
TOTAL	2,261.7	24,217	3,898.5	38,453	6,160.2	62,670

As shown in this table the busiest day of the week for driver licenses is on Tuesday, which also has the most hours of service. Table 4 also shows that Tuesday has 11.4 licenses issued per hour. This is 1.3 licenses per hour more than the next highest day, Saturday. However, in looking at Table 6, average licenses per hour of itinerant locations, there is almost no difference between the days of the week. The licenses per hour of itinerant locations range from 9.4 on Wednesday to 10.2 on Tuesday. Permanent locations however, range from 9.1 licenses per hour to 13.6 licenses per hour on Tuesday. Data from the April survey does not indicate Tuesday at permanent locations is substantially higher because of the evening service offered that day. Rather, it indicates that Tuesday is generally a busier day for permanent locations.

#### Limitations

1. Since only April was surveyed the data may not be representative of the rest of the year.
2. No information was gathered for renewal only locations. Des Moines (DL Team #40), Cedar Rapids (DL Team #41), and Ames (DL Team #1), issue renewals only on Wednesday, Thursday, and Friday.
3. See Appendix A for locations which were missing information on the survey.

#### IV. DRIVER LICENSE MONTHLY DATA FROM JANUARY 1980 - OCTOBER 1980

This information was supplied by the Driver License Office and contained monthly data by locations as follows:

1. Average licenses issued per hour;
2. Driver test given;
3. Motorcycle tests given;
5. License issued; and
6. I.D.'s issued.

The first five items were entered into a computer base and manipulated by SAS.

Appendix B contains three computer listings showing the following information broken down by location, county, and driver license team:

1. Average values for each of the five items entered;
2. Minimum values - lowest monthly values of each item; and
3. Maximum values - highest monthly value of each item.

In order to calculate average licenses per hour for the 10-month period it was necessary to compute hours of operation for a location. This was derived by dividing total monthly licenses issued by average monthly licenses issued per hour for each location. The licenses issued and hours of operation were summed for the 10-month period, and the sum of the licenses issued was divided by the sum of the hours of operation; to arrive at an average license per hour for the 10-month period for each location.

The computer listings in Appendix B are sorted in ascending order by 10-month average licenses issued per hour. There are 141 locations on the first listing since separate data was kept for Ames on renewal only days.

Several items can be observed from this listing. The average licenses issued per hour for the 10-month period was 9.75. Looking at the computer printout it can be seen that 62.4 percent of all locations were below this value and 37.6 percent were higher.

Table 8 shows a breakdown by 10 percent groups of locations based on average licenses per hour.

TABLE 8  
NUMBER OF LOCATIONS  
BY RANKING OF AVERAGE LICENSES PER HOUR

Percent	Minimum Service	0- 1/2 Days/ Week	More than 1/2 to 1 Days/ Week	2 or More But less Than 5 Day/week	Permanent <sup>1</sup> 5 Days/Week
0 - 10%	0	11	2	0	1
10.1 - 20%	1	0	9	2	2
20.1 - 30%	1	4	9	0	0
30.1 - 40%	2	3	8	0	1
40.1 - 50%	3	2	6	2	1
50.1 - 60%	1	2	9	2	0
60.1 - 70%	2	1	6	4	1
70.1 - 80%	1	1	7	2	3
80.1 - 90%	2	0	7	2	3
90.1 - 100%	3	3	5	0	3
TOTAL	16	27	68	14	15

The average licenses issued per hour were as follows for the indicated percentile ranks:

0% - 4.78	60% - 9.60
10% - 6.36	70% - 10.14
20% - 7.16	80% - 11.14
30% - 7.76	90% - 12.29
40% - 8.46	100% - 15.92
50% - 9.01	

In dicussion with the Driver License Office, a goal of 10 licenses per hour was stated as being the acceptable minimum rate. Using the data in Appendix B and the following formula, the hours of operation by location can be calculated:

$$\text{Average License per Hour} = \text{AVLH}$$

$$\text{Total Licenses Issued} = \text{ATOT}$$

$$\text{Hours of Operation} = \text{HOURS}$$

$$\text{Change in Hours} = \text{OPT HOURS}$$

$$\text{HOURS} = \frac{\text{ATOT}}{\text{AVLH}}$$

Using this equation and the data in Appendix B and setting AVLH = 10, the following equation can be used to calculate the increase/decrease in service needed to arrive at 10 licenses per hour for each location:

$$\text{OPT HOURS} = \frac{\text{ATOT}}{10} - \frac{\text{ATOT}}{\text{AVLH}}$$

<sup>1</sup>Includes Ames, which is treated as one location.

A positive number indicates increased hours and a negative number means that decreased hours of monthly service would be required for a location to issue an average of 10 licenses per hour.

Using the above calculations, Table 9 was developed:

By use of Table 9 it can be seen that Parkersburg could be changed from a one day/week to an every other week location. Assuming the same number of licenses issued, this would mean Parkersburg would issue an average of 9.56 licenses per hour. The actual number would probably be less since some people would presumably get their licenses at another location because of the decreased service.

Using a table such as the one above to achieve optimum service depends on several factors. The major factors that would prohibit changes are:

1. No other location in the area can increase/decrease service;
2. Another location that would gain from increased service is not available for the additional hours/days;
3. Increased travel time to get to a different location would be counter productive; and
4. Some changes would involve a major redistribution of locations/days, and driver license teams.

#### Limitations of Data

1. It is aggregate data and contains only monthly totals.
2. Biases exist because of holidays for itinerant locations (i.e., McGregor and Rock Valley, one day a month locations, both had a holiday and this caused all of their minimum values to be zero).

#### Observations

This data is essential since it contains basic information on the operation of each location. Because it was hand compiled and hand totaled, its usefulness is extremely limited. To extract listings such as the Office of Transportation Research has compiled would require an inordinate amount of time. To facilitate manipulation of the data the Driver License Office should, in conjunction with Data Processing, develop a computer file and programs to manipulate it to provide information similar to that provided in this report. Some of the benefits of having such a computer file are as follows:

1. Once a program is written it can be used repeatedly.
2. Time wasting hand calculations can be avoided.
3. The data can be manipulated via the computer in many ways that would be prohibitive if it were to be done by hand.
4. Looking at many years of data would be possible.
5. Summary reports (i.e., yearly, quarterly, fiscal year) could easily be generated.
6. Human error in calculations would be avoided.

The time spent by the Office of Transportation Research in entering and proofing the data was more than the time required to write the programs which produced the listings shown in Appendix B and in this section of the report.

## V. COST DATA

Salary, vehicle cost, and vehicle depreciation were obtained from Payroll for each of the 38 DL teams. Annual rent costs were obtained from Facilities Management for the 36 locations that pay rent. Fiscal Year maintenance costs were obtained from the Driver License Office. A list of each of these items is contained in Appendix C.

The following relationships were then developed to measure the cost to the public in lost time and vehicle costs if they had to travel to a different location.

$$\text{Public Cost} = (\text{Distance Traveled} \times \text{Costs Per Mile to Operate Vehicle}) + (\text{Lost Time} \times \text{Cost/Hour})$$

Cost Per Mile to Operate Vehicle = \$.2258

Cost/Hour = \$5.93

Lost Time = Miles 148 mph

The equations used to estimate Driver License Office costs for a location are as follows:

$$\text{Vehicle Cost} = (\text{Maintenance} + \text{Gas} + \text{Depreciation}) \times (\% \text{ of Miles Traveled} / \text{Location of Total Miles Traveled for the Vehicle})$$

$$\text{Staff Cost} = \text{Lost Time} \times (\% \text{ Location's Time is of Total for the DL Team})$$

$$\text{Location Costs} = \text{Vehicle Cost} + \text{Staff Cost}$$

A calculation of the cost effectiveness in closing the Keokuk location is shown. Keokuk was chosen because of its location within the state. Since all people who would receive their licenses in Keokuk can be assumed to receive their licenses in Fort Madison, estimates of average distances traveled per person is simplified. These estimated costs are shown step by step for both the public's cost and the Driver License Office cost.

Calculation of cost of closing Keokuk Location:

### Estimated Public Cost

1. Ninety percent of the distance from Keokuk to Fort Madison, 24 miles, would approximate the additional one-way traveled if the Keokuk location were to be closed.
2. People = Average Licenses per Hour x Number Hours of Operation in One Year = 12.23 (364) = 4452
3. Time Lost =  $(2 \times (\text{Distance to New Location}) / (48 \text{ mph})) \times .9$   
=  $(48/48) \times .9 = .90 \text{ Hours}$
4. Cost/Hour = \$5.93

$$\begin{aligned}\text{Lost Time Cost} &= \text{People} \times \text{Time Lost} \times \text{Wage Cost/Hour} \\ &= 4,452 \times .90 \times \$5.93 \\ &= \$23,760.32\end{aligned}$$

5. Miles Traveled =  $48 \times .9 = 43.2$
6. Vehicle Cost = .2258 per mile
7. Trip Cost =  $(43.2) \times .2258 = 9.755$

Travel Cost = \$9.755 (4,452) = \$43,429.26  
Public Cost = Lost Time Cost + Travel Cost

Public Cost = \$23,760.32 + \$43,429.26 = \$67,189.58

Estimated driver license team costs if location is closed and number of DL teams are reduced:

1. Location Cost = Rent + Maintenance  
= 0 + \$589.95  
= \$589.95

2. Vehicle Costs = (Maintenance + Gas) + Depreciation)) x Ratio of Keokuk  
To Total Miles  
Vehicle Cost = (\$1,719 + \$573) x .3)  
= \$587.60

3. Staff Cost = (Fiscal Year 1979 - 1980 Salary) x Ratio of Location  
Hours to Total Hours  
for the DL Team  
  
= \$62,488 x .2 = \$12,497

Driver License Cost = Location Cost + Vehicle Costs  
+ Staff Costs  
= \$589.95 + \$687.60 + \$12,497  
= \$13,774.55

The estimated result of closing the location using the above calculation would result in a net loss of \$53,415.03 to the public. The required average license issued per hour to break even for closing this location would have to be 2.5 licenses per hour. The somewhat rough technique used to arrive at these figures is no doubt open to some criticism. However, the important thing to observe is the number of licenses per hour that would be required to just break even. Considering the lowest average licenses issued per hour for a location is 4.78, from a cost standpoint it will be almost impossible to close any location.

Looking at merely the reallocation of existing staff to a different location would reduce the Driver License Office cost figures even further. However there could be a positive public cost associated with the calculation if the average miles driven is a negative number.

#### Limitations

1. The number of variables that were estimated.
2. The roughness of the calculations.

#### Observations

As this section shows, closing a location cannot be justified from a cost standpoint. However, as shown in the preceding chapter, closing a location or reducing the hours of a location can be justified by providing more equitable service to the public. It may also be possible to change to a new location which would reduce average travel distances.

## VI. DRIVER LICENSE MASTER FILE

This file was originally scheduled to be available on January 1, 1981, but due to delays it has not yet been completed. Appendix D contains a copy of the proposed record format of this computer file. In order to avoid the delay of the completion of this report, a decision was made not to wait for the computer file. Upon its completion a report containing the information extracted will be sent to the Driver License Office.

Data Processing is currently writing a program to extract data from the master file. One major difficulty was encountered in developing this program. This was caused by the lack of a field in the record which would identify either the DL team or location which issued a license. The only solution was to use the control numbers, which are on file, to find a DL team and then use the date of issuance to determine the location. There were 323 separate control number sequences that identify individual driver license teams.

Figures 2 and 3 display each of the two forms used by the Driver License Office to issue licenses. The first form is used by on line teams. For a list of these DL teams see the first section of this report. The second form is used by itinerant locations, and in the event of telecommunications failure, by the permanent locations.

From the driver license master file the following information will be extracted for the period of November 1979 to October 1980:

1. County of residence of person issued the license, by location.
2. Number of various license types issued, by location.

This information will be separated by location by days of the week. Separate totals will be generated for Tuesday, Saturday, and another for the rest of the week. This information will then be evaluated to determine the impact of Tuesday evening service and Saturday service. Figures 4 and 5 show maps that locate counties with evening or Saturday service, respectively. By looking at the distribution of licenses issued by county of residence for a county such as Winneshiek, which offers Tuesday evening service at Decorah, and comparing the distribution of out of county licenses issued on Tuesday to those issued on Wednesday through Friday, a measure of the effectiveness of evening service can be obtained. The same technique can be used to evaluate Saturday service.

### Limitations of Data

1. Because no location or driver license team identifier is included in the computer record, use of this file in its current form is limited.
2. Some items such as whether a driver test was given, or a written test was given, are not included in the file.

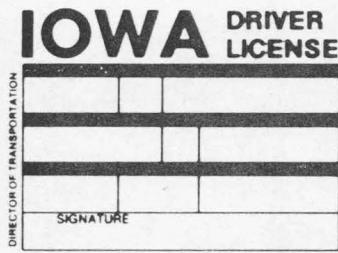

### Observations

The Driver License Office should investigate, with Data Processing, the possibility of using this file to generate periodic reports showing driver license location activities. This would involve the addition of a variable to

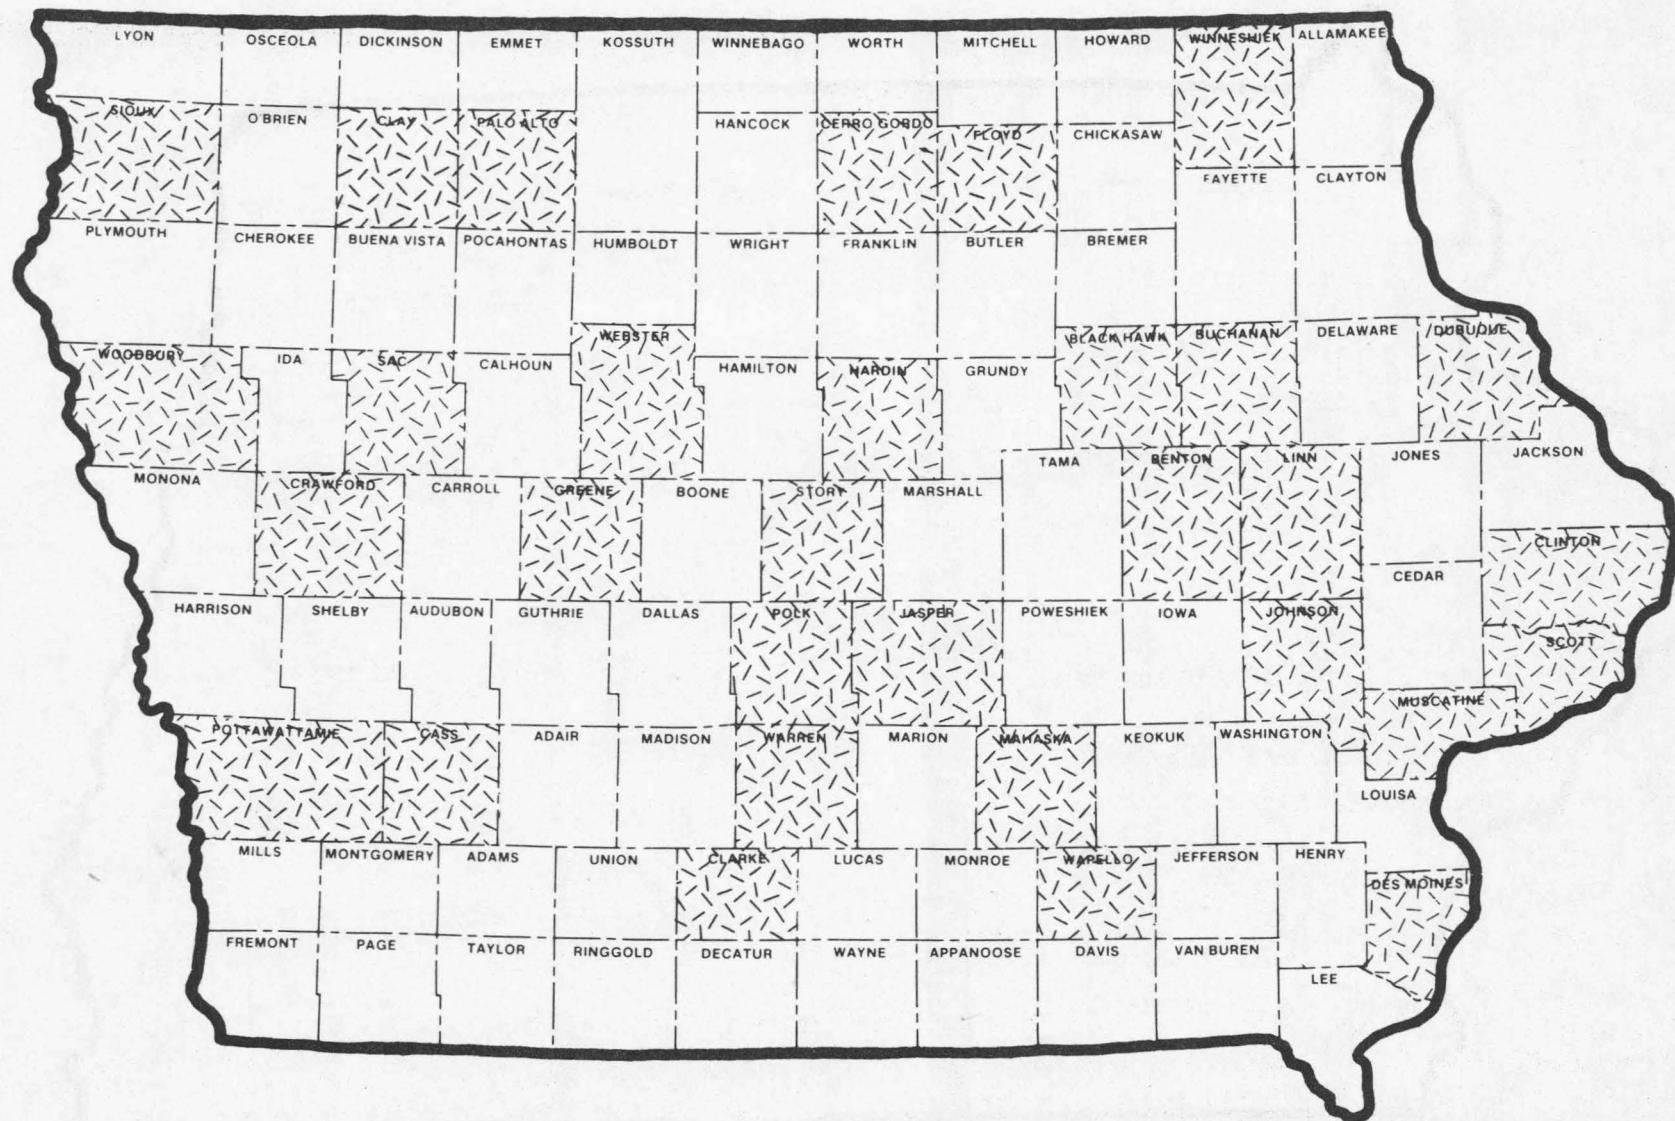

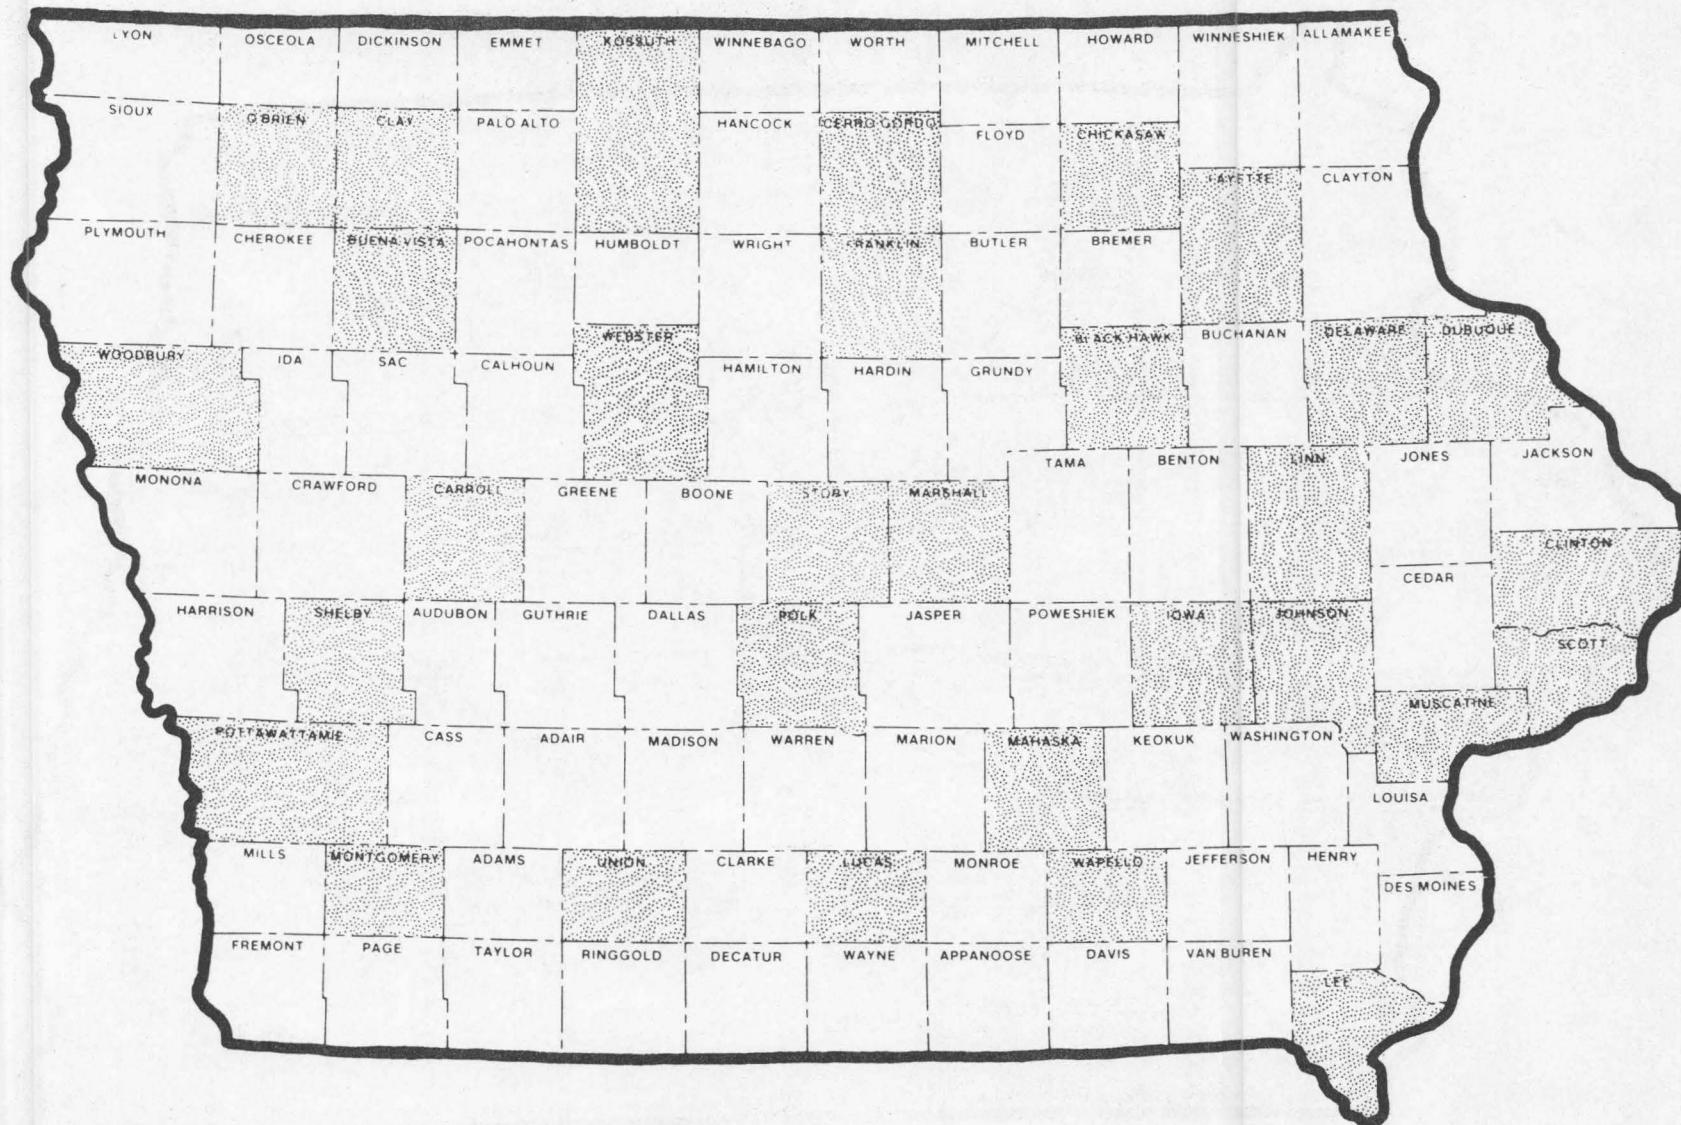

FIGURE 5

## COUNTIES WITH SATURDAY SERVICE

each record that would identify each location and possible other variables to identify items such as those mentioned in the above section on limitations. If this is not feasible, or would not provide the needed information, then the possibility of building a separate computer file using the information from each of the two types of driver license forms should be investigated.

Additional information that could be compiled for on line location is the licenses issued for each hour. If hourly data is needed, the possibility of compiling the information from terminal entry operations should be investigated. Data from the April 1980 survey indicated 39 percent of all licenses issued were from permanent locations.

## VII. OTHER DATA SOURCES USED IN EVALUATION OF THE DRIVER LICENSE OFFICE

The following table shows the distance from a DL team's base station to each of its remaining itinerant locations. This data was taken from the mileage table of the statewide traffic model which is contained on a computer listing and available from the Office of Advance Planning, Traffic Estimation Section.

Also used in the analysis was 1970 census data. This data was gathered from two sources: County population was obtained from the census publication, "General Social and Economic Characteristics, Iowa" - Table 43; incorporated area populations were obtained from the cities computer tape maintained by the Office of Transportation Inventory.

Based on 1970 census figures, 55.97 percent of the Iowa population has a driver license location in the incorporated area in which they live. If contiguous areas are included this is increased to 58.3 percent of the population.

The following tables show the 1970 population data for incorporated areas with a driver license location.<sup>1</sup> The list by location shows 0 population for the second and subsequent listings of Des Moines, which has four locations, and Cedar Rapids, which has two locations.

<sup>1</sup>After analysis of the data was completed 1980 preliminary census figures became available. These figures are also shown on the computer listings. These numbers were taken from 1980 census of Population and Housing, PHC80, Page 17, Feb 1981.

## VIII. SUMMARY

In using the data that the Driver License Office had available, it was found that most items needed for decisions are already available. However, human organization of the data into the formats needed for the information to be useful would be extremely time consuming. Because of this it is recommended the Driver License Office, in conjunction with Data Processing, develop computer file(s) and programs to use the existing data.

Use of the newly developed driver license master file's information to make decisions based on efficiency of operation will be almost impossible if a variable identifying locations is not added. This should also be considered by the Driver License Office in conjunction with Data Processing.

The original proposal called for developing techniques to optimize service based on fixed ranges of values for station operating times and development of a range of desired average licenses issued per hour. Because of the complex interaction of locations as listed in the section on the January - October 1980 data, an alternative approach was developed. This approach does not require a given license issued per hour value. It involves a technique for providing the optimum service for any given value of licenses issued per hour, which in turn determines the optimum number of hours a station can be open. Use of this method will require that the Driver License Office evaluate locations in areas of the state as a group, and will require a considerable amount of judgment as to what changes are desirable.

The most important data that was lacking was that which could be used to evaluate Tuesday evening and Saturday service. To make an evaluation of how important this service is would require determining if a person who got a license during those hours could have gotten it during regular hours. The only feasible method for collecting this data would be to survey those people who got their licenses during evening hours on Tuesday, and on Saturday.

## APPENDICES

## APPENDIX A

The variables on the computer pages numbers ii - xix are as follows:

DL NO = Driver License Team Number

DA = 2 = Tuesday

= 3 = Wednesday

= 4 = Thursday

= 5 = Friday

= 6 = Saturday

OPEN = Opening time by 1/10th of an hour in military time

CLOSE = Closing time by 1/10th of an hour in military time

WAITING = Number of people waiting when a location opens

HR8 - HR 19 = Number of licenses issued for the one hour military time beginning with the indicated hour

DRIVER LICENSE TEAMS MISSING INFORMATION ON APRIL SURVEY

DL Number 1

April 30 - Wednesday - Adel

DL Number 2

April 7 - Tuesday - Des Moines

DL Number 3

April 18 - Friday - Des Moines

DL Number 8

April 25 - Friday - Sioux City

DL Number 14

April 4 - Friday - Clarion

April 18 - Friday - Clarion

DL Number 17

April 3 - Wednesday - Waterloo

April 4, 18 - Friday - Waterloo

DL Number 23

April 11 - Friday - Bettendorf

DL Number 26

April 12 - Saturday - Ottumwa

DL Number 29

April 3 - Thursday - Des Moines

DL Number 31

April 19 - Saturday - Muscatine

No information is available from renewal only stations

1. Ames (01) Wednesday, Thursday, Friday
2. Des Moines (40)
3. Cedar Rapids (41)

## Appendix E

### SUMMARY OF JUNE 1977 SURVEY DATA FOR TUESDAY EVENING AND SATURDAY SERVICE

In reviewing the opinion poll conducted by Central Surveys, Inc. during July 1977, the questions in Appendix F were separated. This separation was made based upon their relationship to Tuesday evening and Saturday service.

The following facts may be obtained from this survey with regard to Saturday service:

1. Eight percent of the people surveyed remembered getting their licenses on Saturday. (Question 3)
2. Six percent of the people surveyed said they would like to have stations open on Saturday to improve service. (Question 6)
3. Thirty-nine percent of the people said having many locations open all day Saturday would be more convenient. (Question 7)
4. Four of 23 people said the reason current service was not satisfactory was because of lack of Saturday or weekend service. (Question 5c)
5. Ninety-one percent of the people who remembered the day on which they got their licenses said it was satisfactory. (Question 5b)
6. Ninety-six percent responded that if the stations were closed on Monday so they could be open on Saturday, it would cause no inconvenience. (Question 8)
7. Five percent of the people who did not have a driver license team visit their community remembered getting their licenses on Saturday. (Question 8)

The following facts may be obtained for Tuesday evening service from the survey:

1. Seven percent of the people surveyed would like to see changes in the hours of operation. (Question 6)
2. Forty-eight percent said it would be more convenient if many locations stayed open until 8:00 p.m. (Question 9)
3. Ninety-five percent responded that if a station opened at noon in order to stay open until 8:00 p.m., no inconvenience would result. (Question 10)
4. Ninety percent said Tuesday would be as good as any evening to remain open until 8:00 p.m. (Question 11)
5. See Question 11a to see reasons why eight percent of the people said Tuesday was not acceptable.

6. Six percent of the people who worked full time said that station operating hours made it difficult or impossible to get to a driver license station on time. (Question 16b)

The two questions asking about the convenience of Saturday or evening service both contained the expression "at many locations". Because there are only 38 driver license teams and 140 locations, the use of the word "many" could have been misleading. Also, just from the nature of these two questions one would expect to get a substantial amount of people who would respond that it would be more convenient. When asked if the current day was satisfactory, 91 percent responded yes. Unfortunately, no question was asked as to whether or not the current hours of operation were satisfactory.

The following tables show operating hours and locations served for various points in time by the Driver License Office. The June 1977 data was from immediately prior to the survey. The February 1979 data was after all teams except 40 and 41 had gone to a schedule set in part by the survey. It should be noted that the survey said "close at 8:00 p.m." for evening service, while the actual closing times were at 7:15 p.m. All percentages are based on weekly hours, and if more than one location was served, all locations served by that team were counted. The hours were weighted accordingly.

Open	Percent hours	Percent Licenses
After 4:00	17.2	14.5
After 5:00	7.1	5.1
After 6:00	2.9	1.6
Saturday	17.4	17.2

\*This Table does not include information for all locations. For locations that were missing information on the April 1980 survey see Appendix A, Item 1.

For the following reasons it is difficult to draw any conclusions in regard to evening and Saturday service from this survey:

1. The only people who are included in the survey are those with a telephone.
2. No documentation was included on what was done if a person was not reached on the first call.
3. No documentation is included on how sample was selected.
4. In the period reviewed, January 1973 - October 1980, there was always some evening and Saturday service.
5. No data is available other than that from the April 1980 survey to use to evaluate evening and Saturday service.

## Appendix F

### Questions Pertaining to Tuesday and Saturday Service From July 1977 Survey

Q.3: Do you recall whether you renewed your license on a weekday or on a Saturday?

Weekday	84%
Saturday	8%
Don't recall	8%

Q.5a: (If never on Q.5) How about the nearest community that the driver license team visits -- do you know what day or days they are there?

Monday	4%
Tuesday	9%
Wednesday	7%
Thursday	14%
Friday	12%
Saturday	5%
Daily (includes those mentioning 3 or more days)	26%
Don't know, can't recall	33%

Q.5b: (Asked only of the 331 who name day on Q.5 or 5a) Is that day as satisfactory as any, from your standpoint?

	Number of respondents (331)
Yes	91%
No	8
No opinion	1

Q.5c: (If "no" on Q.5b) Why not?

- 2 say "We need more days" or "It would be better to have it open more days."
- 2 "They should be open on Saturdays."
- 2 "They should be open available every day."
- 4 "It isn't good for working people.", I have to take off work.", "It's hard for working people.", etc.
- 1 "I have to take off work early because I work until noon and they close at noon.
- 1 "It's hard for me to get there because of my job."
- 1 "Too many people work and cannot get to the driver license renewal place and have to take off work.

- 1 "It's impossible for me to go to my county courthouse during the work week ----Monday through Friday."
- 1 "I only have Thursdays off. From 4 o'clock after working hours is when I find it more convenient".
- 1 "I have other activities I have to attend to after working all day."
- 1 "I prefer a center closer to home and I think a center near here should be open on Saturdays as we work."
- 1 "I work nights."
- 1 "I have to go on my noon hour."
- 1 "If I'm not able to make it on Friday I have to drive to a town further away."
- 1 I drove to Forest City, 25 miles away, and the examiner wasn't there so I drove another 15 miles to Garner. I'd like to have them open more than one day a week."
- 1 "It's packed with people those days."

Q.6: The people in charge of the Driver License Office in Iowa are trying to improve the service available to the driver of Iowa. Are there any time or place changes you would suggest, that would make it more convenient to you, when you renew your license next time?

Suggest changes in timing	16%
Refer to hours -- Open earlier, stay open later, oper over noon hour, etc	(7%)
Want stations open Saturdays, weekends, etc.	(6%)
Prefer different or more days	(3%)
Want more or closer stations	8%
Mention actual procedures of testing teams:	
Want separation of routine renewal and testing, motorcycle or chauffeur, etc.	(2%)
Want more manpower, quicker service	(1%)
Critical of procedures, machinery, picture taking, etc.	(1%)
Offer miscellaneous other suggestions	3%
Offer no suggestions	73%

Q.7: One possibility is to keep the licensing stations open all day Saturday at many locations. Would that be more convenient for you, or wouldn't it make any difference?

More convenient	39%
Would make no difference	59%

	Less convenient	1%
	No opinion	1%
Q.8:	If the licensing stations were open Saturday, they would probably close on weekday, since most people work a five day week. If the licensing stations were always closed on Monday, would that be any inconvenience to you, or wouldn't matter?	
	Would be inconvenienent	3%
	Wouldn't matter	96%
	No opinion	1%
Q.9:	Another possibility is to stay open until 8 p.m. on one night each week at many locations. Would that be more convenient for you, or wouldn't it make any difference?	
	More convenient	48%
	Makes no difference	52%
	Less convenient	*
	No opinion	*
Q.10:	If the licensing stations stayed open one evening per week, they would probably open at noon that day instead of earlier in the morning. Would that matter to you?	
	Yes, it would matter	4%
	No, it would not	95%
	No opinion	1%
Q.11:	Would Tuesday night be as good as any to stay open until 8?	
	Yes	90%
	No	8%
	No opinion	2%
Q.11a:	(If "no" on Q.11) Why? Percent asked,	8%
	Prefer night stores are open	4%
	Have a conflict on Tuesday, lodge night, bridge nights, etc.	2%
	Give no reasons for wanting another night, would prefer Monday, Wednesday, more convenient, etc.	1%

Don't know, give no reason

\*

Q.16b: (If "full time" on 16a) Do you work regular daytime hours, such as 8 a.m. to 5 p.m., or some other type of schedule? Percent asked, 48%

Work hours that are either not controlled or daytime hours, can get to license bureau if want 45%

Work hours make it difficult or impossible to get to driver license station at proper time 3%

\*Less than  $\frac{1}{2}$  of 1 percent.
