

HELP PROTECT CHILDREN

CDC photo Credit -Cade Martin

Lead is all around!

Common sources of lead exposure to children:

- ◇ Buildings (including homes) built before 1978 are the most common source of lead exposure in Iowa from:
 - ◇ Peeling lead-based paint and lead in dust in soil
 - ◇ Renovations/repairs and remodeling of buildings built before 1978
- ◇ Old toys and imported jewelry
- ◇ Take home lead (if parent is exposed to lead at a job or hobby) See back for jobs/hobbies examples
- ◇ Candies from other countries/home remedies
- ◇ Water (lead pipes)
- ◇ Chewing or eating non food items like paint chips, dirt, window frames, jewelry, keys, or other metal or painted objects
- ◇ Pottery, Health Remedies and Spices (especially turmeric, chili, paprika and cumin) that are imported from outside of US or purchased from international specialty stores
- ◇ Some Traditional folk medicine

Understanding Lead Poisoning

- ◆ Lead exposure at even lower levels has been shown to cause harm as children are highly sensitive to lead. It is important to test young children for lead poisoning.
- ◆ Children with very high lead levels can suffer from irreversible health impacts and in rare cases even death.
- ◆ Young children under age 4 are most at risk for lead poisoning due to development milestones such as hand to mouth activity and their bodies absorb lead more quickly than adults.
- ◆ Lead Poisoning symptoms may include:
 - ◆ Being easily excited
 - ◆ Problems paying attention
 - ◆ Having stomach aches/headaches
 - ◆ Being more tired than usual
- ◆ Buildings built before 1978 probably contain lead based paints. It is important to check to see if your child care building has lead based paint.

FACT

Lead testing is the only way to know if a child is lead poisoned. Most lead poisoned children do not look ill. A simple finger prick to collect the blood sample can be done by a health care provider.

FACT

Blood Lead testing is **required** in Iowa before starting kindergarten.

To Do Checklist

Help To Decrease Children's Exposure to Lead

-
- ⇒ **Look for any chipping or peeling paint in your child care building and outside of your building.**
 - *If found, contact your local Child Care Nurse Consultant (CCNC) for information.*
 - *Keep children away from chipping and peeling paint inside and outside of the child care building, especially around windows.*
 - ⇒ **Test your child care building for lead.** *Buildings built prior to 1978 should be tested for lead by a certified lead inspector or by purchasing a lead test kit from a home improvement store.*
 - ⇒ **Check to see if your water pipes contain lead.** *Old plumbing may include lead.*
 - ⇒ **Wash children's hands after playing and before eating.** *In addition, review best practices on additional times to wash hands.*
 - ⇒ **Review your menu to make sure it includes foods high in calcium, iron and vitamin C.** *If children are exposed to lead, good nutrition may reduce the amount of lead absorbed by their bodies.*
 - ⇒ **Sign up for recalls at Consumer Product Safety Commission (CPSC).** *CPSC has a list of recalls of products that contain lead (as well as other recalls). Recalls occur frequently. Remove any recalled toys and other recalled items from your child care environment.*
 - *Information on recalls available at <https://www.idph.iowa.gov/hcci/recalls>*
 - ⇒ **Obtain resources on child care lead poisoning to share with families in your newsletter, bulletin board or mailings.**
 - *Contact your local Child Care Nurse Consultant for help connecting families to resources for lead prevention programs, local testing options and brochures.*

Did you know?

Here are some examples of jobs and hobbies that may be exposed to lead:

- * Manufacturing (auto or industrial equipment part or battery)
- * Metal repair or recycling (scrap metal, electronics, vehicle radiators)
- * Firearms (target practice, indoor/outdoor shooting ranges, ammunition (making, casting or reloading))
- * Fishing (making lead sinkers)
- * Antique Furniture (refinishing)
- * Pottery making or glazing
- * Metal Welding
