REPORT NUMBER 1027

OCTOBER, 1978

#### ACKNOWLEDGEMENTS

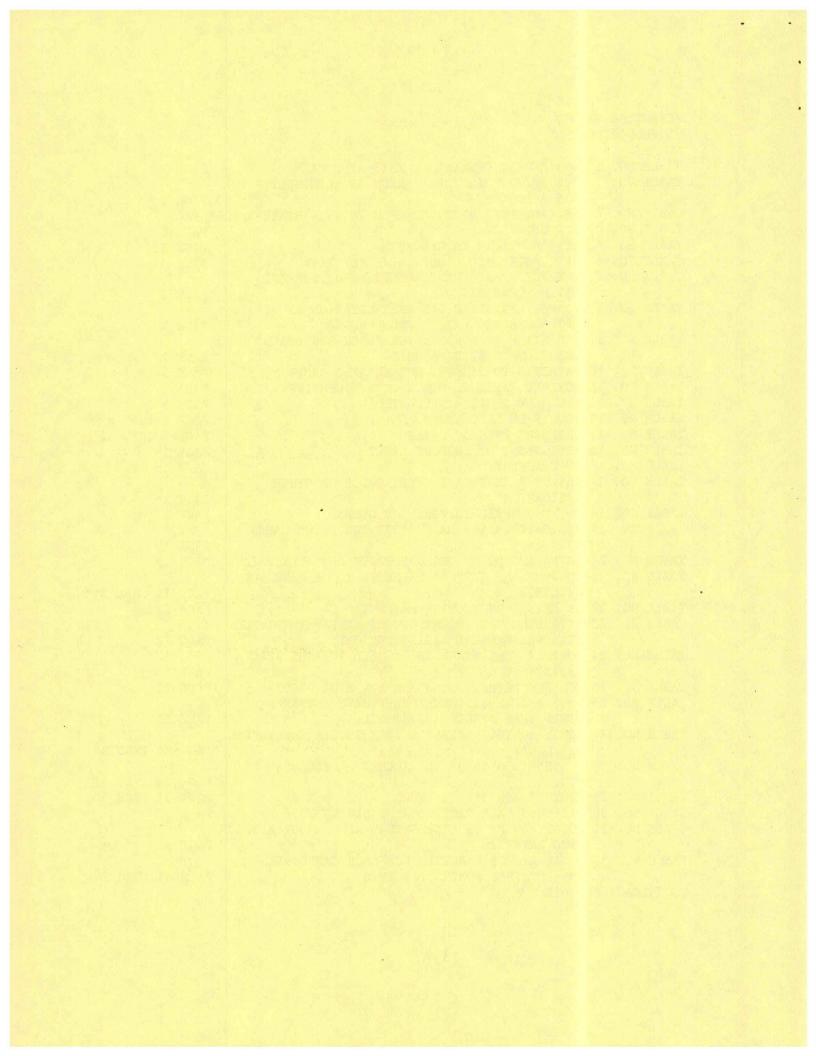

The completion of the 1977 AFDC recipient study was dependent upon the time, patience and effort of many people. Some people edited the questionnaires after they were completed. Other people punched the cards used in electronic data processing. A typist had to prepare the numerous tables. A special thank you goes to the workers in all of the 99 counties who filled out the study questionnaire for each individual recipient in the sample.

S. John DeHaan Statistical Research Analyst

#### INTRODUCTION

Why invest time and money in a study of AFDC characteristics? A superficial answer might go as follows:

"The State of Iowa has a responsibility toward deprived children. Maybe a little data on the subject might be useful."

The question deserves a more sophisticated answer. In March of 1977 the state of Iowa had 31,187 households which received assistance under the program known as, Aid To Families With Dependent Children (AFDC). A family can qualify for AFDC only if there of their parents. An assessment of needs must precede any kind of rational conviction about the program. There are alternative levels of help. A choice of one level or another must precede action. In conclusion from this it may be said that a fund of data showing the social and economic characteristics of recipients is essential.

The responsibility for deprived children falls heavily upon persons in the General Assembly and perhaps even more heavily upon persons in the Department of Social Services. Inevitably the responsibility falls in greater than normal degree upon a relatively few individuals. Almost as inevitably these persons need detailed information. This report is designed to give these persons the kind of information they need.

The people who attempt to supply this data soon discover that information about a single case is not enough. The social and economic characteristics of the AFDC household vary from case to case. The usual and the unusual case must both be served. The actual amount of an AFDC payment depends on the number of persons in the assistance group and the amount of other income. The cases are numerous and varied. Under these circumstances it becomes imperative to summarize the data.

It seems worthy to emphasize a distinction between the qualitative and the quantitative aspects of a table or statement. The qualitative aspect is expressed in words and serves to identify a distinct feature commonly found from case to case. The quantitative aspect is expressed in numbers and serves to count what ever has been identified. For instance, the study tells us that a child may have a Father who is absent from the home. A total of 54,729 children share this characteristic.

Proper summarization can be achieved through an understanding of each aspect and the relationship between them. We wish to avoid the kind of fallacy illustrated in simple form by counting apples and oranges.

#### SUMMARY

A series of somewhat independent statements can summarize in approximate fashion the most common characteristics of the AFDC household. The household is likely to consist of less than four (4) persons. The number of children will likely be less than three (3), but can vary from one to eight. The children will be legitimate and under thirteen years of age. The other person will be the wory likely be unemployed and without earned income. The Father will be absent from the home, and the household will be without income other than public assistance.

#### SUMMARY TABLE NO. 1

Group	Characteristic	Percent
Households	Less than 4 persons	53.2
Households	Less than 3 children	70.8
AFDC children	Legitimate	80.1
Children household	Under 13 years of age	70.8
AFDC children	Mother in home	92.9
Households	Mother unemployed	76.3
AFDC children	Father absent from home	83.6
Households	No other income	60.8

#### SUMMARY TABLE NO. 2

Group	Characteristic	Average	
All cases	Monthly full standard of need	\$318	
All cases	Monthly standard of payment	\$301	
All cases	Monthly AFDC payment	\$265	
All cases	Monthly value food stamps	\$103	
All cases	Monthly charge food stamps	\$ 51	

The data shows an average of 2.34 children per household. The 1975 AFDC characteristics study shows of the AFDC family. "These facts are worth noting, since one of the predominate images of an ADC family is that of a Mother who has several children in order to obtain a larger ADC check. Judging from the number of one or two-child families, this is very obviously a false image." The present study verifies this statement.

In a way the data is conspicious for what it does not say. The data provides no evidence that the AFDC family is pampered. The presence of children in the home acts to limit employment opportunities for the Mother. The data tells us nothing about the consequences and costs that might follow from not helping deprived children. These costs are not visable.

The annual report, Iowa Department of Social Services for the year ending June 30, 1977 shows that the state spent \$46,304,087 of its own money on Aid to Dependent Children. This is a lot of money. However, the expenditure falls on a population estimated at 2,870,000 for the year 1976. This estimate appears in the statistical abstract of the U.S., in this perspective the cost of the program amounted to \$16.00 per person per year.

TOTAL All AFDC cases in 3/77	31, 186	100.0	

TOTAL All AFDC cases in 3/77

31,186

#### TECHNICAL APPENDIX

The recipient characteristics study for March, 1977 was conducted by the National Center for Social Statistics (NCSS), Department of Health Education and Welfare. This unit composed the questionnaires or schedules and other materials published and distributed in connection with the study.

The sampling procedure was prescribed by NCSS. It is described in a document subtitled "Sampling Instructions." Part C thereof is titled "Method of Selecting Sample" and is quoted as follows:

"AFDC cases and SSI cases will be selected based on prescribed random digits that correspond to digits associated with the case. A list of random numbers is in Appendix A. All cases with the numbers from the list of random numbers will be included in the sample. For those cases that do not have a social security number available for drawing the sample, another number containing randomly assigned digits (such as the case number) will be used."

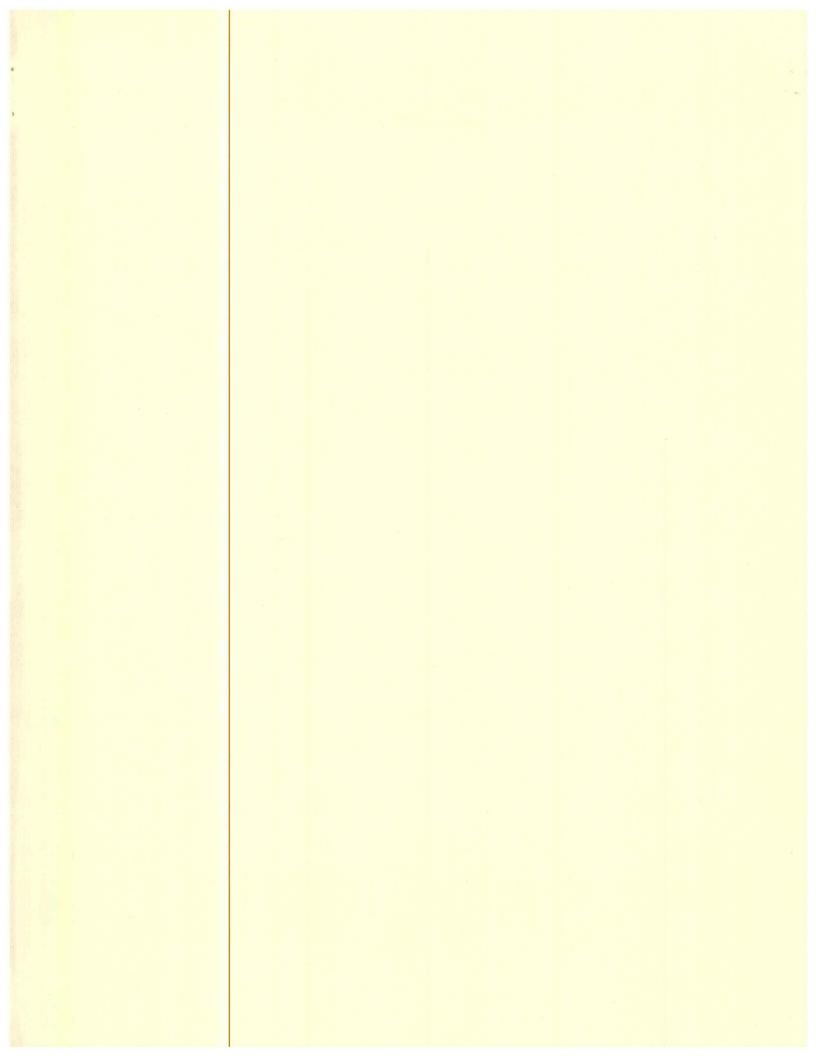

The size of the sample was set at 400 cases. The AFDC caseload in March, of 1977 amounted to 31,187 individual cases. The ratio between the number of cases in the sample and the number of cases in the universe is 1/78. Random numbers were used to select approximately one (1) case out of every seventy-eight (78) cases on the case Data Master File.

The questionnaires for the selected cases were sent out to the county offices and completed by local office personnel. The local office personnel had to rely on their knowledge of the client and the records pertaining to the individual case. The questionnaires were later returned to the central office. Here they were edited with intent to detect improper coding.

The next step involved keypunching and placed the information from the questionnaires on IBM punch cards. A decision was made to create two sets of cards. One set was forwarded to NCSS, the other set was retained for our own use. From this point in time the data could be studied here with the use of our electronic data processing equipment.

A distinction has been made and a separate schedule has been provided for; Income Maintenance, Medical Services and Social Services. This report deals with income maintenance. The income maintenance schedule is in turn divided into three parts. The separate parts of the income maintenance schedule are focused on; The case, Adults in the Household, and Children in the Household.

The Income Maintenance and other schedules have a format for the individual question which question which includes a code number and a statement. A similair format now appears in the computer programs and in this report. The system facilitates cross reference between the various documents pertaining to the AFDC Study for 1977. These documents include one with the subtitle, "Instructions for Income Maintenance Schedule." A knowledge of these instructions may give new insight into some of the results.
