New water treatment plant constructed primarily in 2022

Introduction

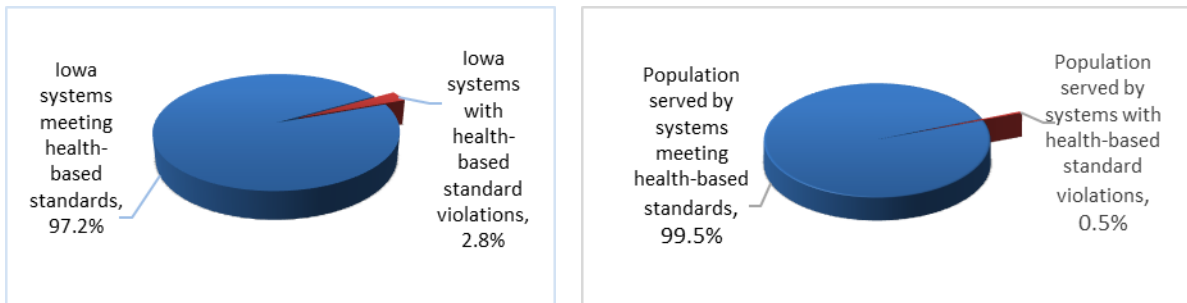

The Iowa Department of Natural Resources (DNR) administers the Public Drinking Water Program in Iowa under delegation of authority from the United States Environmental Protection Agency (EPA). The 1996 re-authorized Safe Drinking Water Act (SDWA) requires that each state that has been granted primary implementation authority prepare an annual report on violations of national primary drinking water regulations within the state, make the report readily available to the public, and submit it to the EPA. This report fulfills this responsibility in Iowa for the 2023 calendar year, and includes violations of maximum contaminant levels, maximum residual disinfectant levels, treatment technique requirements, action level exceedances, major monitoring or reporting requirements, and operator certification requirements.

2023 Report Highlights

Iowa’s inventory of public water supply (PWS) systems was 1,834, a slight decrease from 2022. The percentage of systems in compliance with all health-based standards in 2023 was 97.2%, while the percentage of population served by systems compliant with all health-based standards was 99.5%. Major monitoring and reporting requirements were met by 80.4% of systems. The percentage of population served by systems in compliance with the major monitoring and reporting requirements was 92.4%.

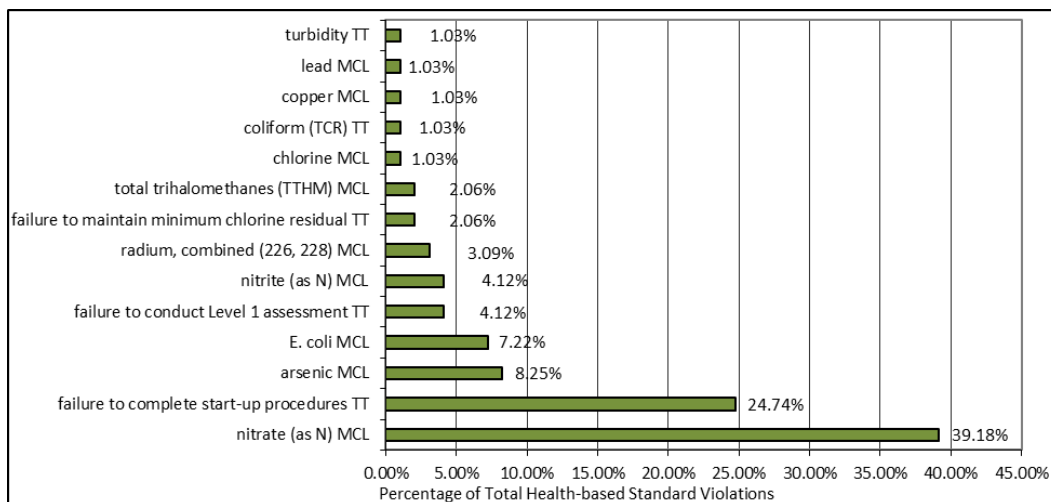

Compliance with Health-Based Standards

No waterborne diseases or deaths were reported from Iowa PWSs in 2023. Of the nearly 3.07M people served by Iowa’s PWSs, over 3.05 million people regularly received water from systems meeting all health-based drinking water standards.

Health-based drinking water standards were met by 97.2% of the 1,834 regulated PWSs. There were 52 PWSs that had 97 violations of a health-based drinking water standards, maximum residual disinfectant level, treatment technique, or action level.

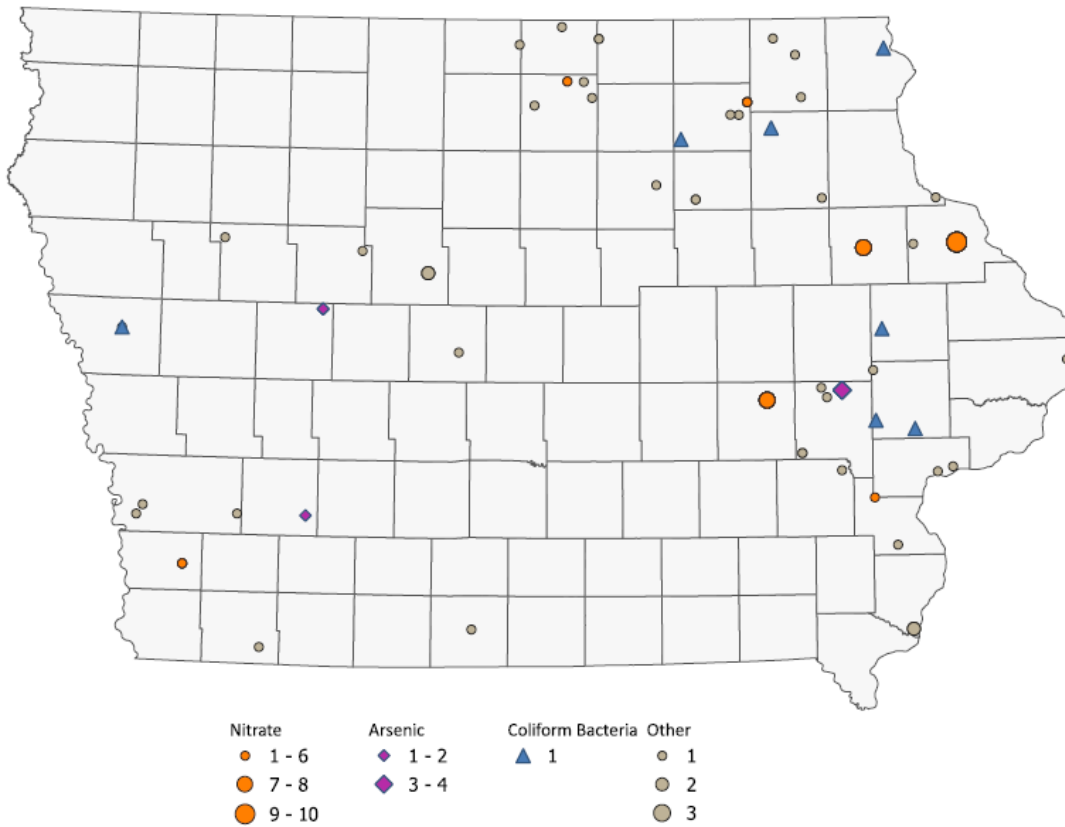

Nine regulated contaminants were found at levels that exceeded the health-based standards during 2023, and five treatment techniques were not met. The standards are shown in the chart on the following page, along with the percentage each contributed to the total number of health-based standard violations.

2023 Health-based Standard Violations Map

The map below depicts the health-based standard violations that occurred in 2023 at Iowa's PWSs, with the number of violations denoted by size of the marker. Three common violations are shown separately; the remaining violations are grouped together as "other."

Health-Based Standard Violations at Iowa Public Water Supplies in 2023

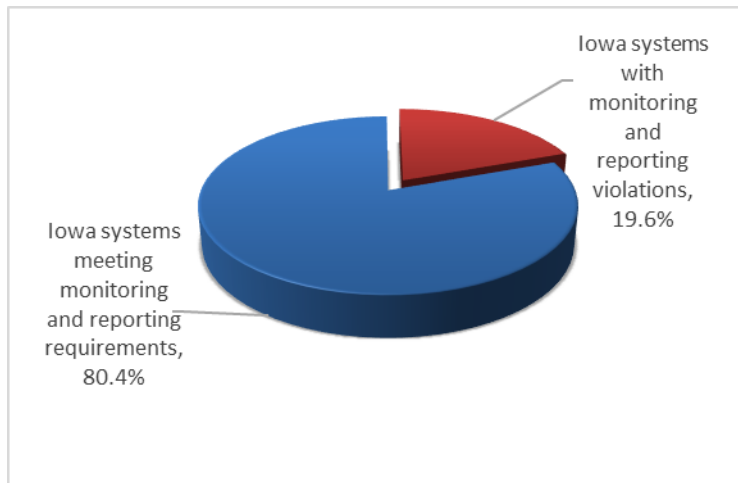

Compliance with Monitoring & Reporting Requirements

A major monitoring violation is incurred when a required sample is not collected for a specific contaminant.

Over 2.83 million people regularly received water from Iowa systems that complied with all major monitoring and reporting requirements.

Major monitoring and reporting requirements were met by 80.4% of the 1,834 regulated PWSs.

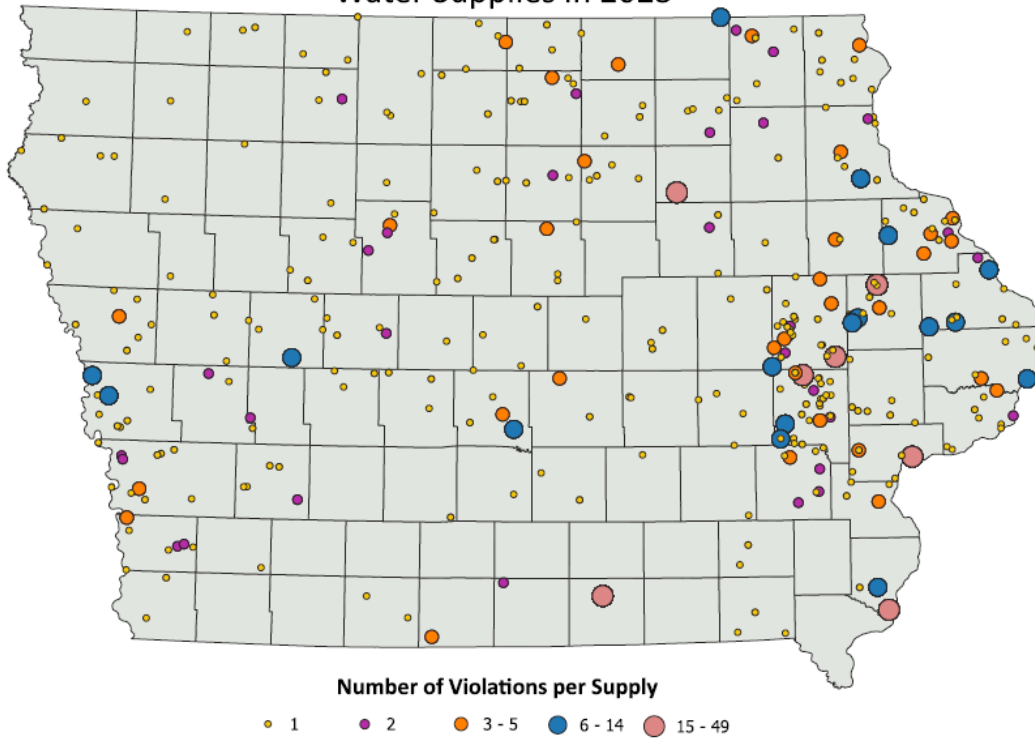

There were 596 major monitoring violations in 2023 at 251 systems. At least one reporting violation was incurred by 188 systems, for a total of 356 reporting violations. The monitoring and reporting violations are shown on the following chart, along with the number each contributed to the total number of monitoring and reporting violations.

2023 Major Monitoring and Reporting Violations Map

This map depicts the systems in Iowa that incurred a major monitoring or reporting violation in 2023. The system that incurred the most monitoring/reporting violations in 2023 had 49 monitoring/reporting violations.

Major Monitoring and Reporting Violations at Iowa Public Water Supplies in 2023

The National Public Drinking Water Program: An Overview

The EPA established the Public Water System Supervision Program (PWSSP) under authority of the 1974 SDWA, which was most recently amended in 1996.

- To ensure the water is safe for human consumption, EPA sets national limits on allowable contaminant levels in PWSs. These limits are known as maximum contaminant levels (MCLs) and maximum residual disinfectant levels (MRDLs).
- Because certain contaminants are difficult to measure, EPA establishes treatment techniques (TTs) or action levels in lieu of MCLs to control unacceptable levels of those specific contaminants in public drinking water.
- EPA specifies how often systems must monitor for contaminants and requires those monitoring results be reported to the state. Generally, the larger the population, the more frequent the monitoring and reporting requirements.
- EPA requires systems to notify the public they serve when violations of the drinking water regulations occur. Public notification must include a clear and understandable explanation of the nature of the violation, potential adverse health effects resulting from the violation, steps the system is taking to correct the violation, and the availability and necessity of using alternative water supplies until the violation is corrected.
- EPA also has requirements for certification of water distribution and water treatment operators, environmental laboratory certification, and development of systems' technical, financial, and managerial capacity, to ensure that systems are properly operated.

The SDWA applies to all 50 States, the District of Columbia, Native American Indian Lands, Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands.

The SDWA allows States and Territories to seek EPA approval to administer their own PWSSP, which is called primacy. To receive primacy, States must meet certain requirements set forth in the SDWA regulations, including adoption of drinking water regulations which are at least as stringent as federal regulations, and must demonstrate that the state or territory can enforce the program requirements. Of the 56 states and territories, all but Wyoming and the District of Columbia have primacy. The EPA Regional Offices administer the PWSSP within those two jurisdictions.

Native American tribes must meet the same requirements as a state in order to receive primacy. EPA currently administers PWSSP on all Indian lands except the Navaho Nation. The three PWSs operated by Native American tribes in Iowa have not received primacy and are overseen directly by EPA Region 7 (Lenexa, KS): Winn-A-Vegas Casino in Sloan; Blackbird Bend Casino in Onawa; and, the Sac & Fox Meskwaki Community in Tama.

EPA regional offices report to the states any enforcement actions taken by EPA within their jurisdiction. All SDWA data for a state is stored in an electronic database called the Safe Drinking Water Information System (SDWIS). At the federal level, this database contains an inventory of PWSs and violation records. States have additional computer systems to augment the required functions of the SDWA program.

The Iowa DNR Drinking Water Program Components

The Iowa public drinking water program has the following responsibilities, conducted by staff located centrally in Des Moines (Water Supply and Region 5), as well as in five other cities around the state: Manchester (Region 1), Mason City (Region 2), Spencer (Region 3), Atlantic (Region 4), and Washington (Region 6). The offices are shown on the map at the right.

On-Site Inspection

- Conducts site surveys for well and treatment facility placement.
- Along with contracted county health departments, inspects every PWS in the state at least every five years (three years for community water systems), which includes examination of the operation and maintenance of the entire system.
- Ensures systems address significant deficiencies identified during onsite inspections.
- Reviews monthly operation reports.
- Provides technical assistance to water supply operators.
- Responds to complaints from the public.
- Provides emergency response to spills that may threaten water resources.
- Provides assistance to PWSs during disaster events.

Operation Permitting

- Issues the operation permits for each system at least every three years, which lists the system-specific monitoring, operation, and reporting requirements.
- Provides technical assistance to water supply operators.
- Monitors the compliance by each system with the drinking water program requirements.
- Prepares violation notices, compliance schedules, and enforcement actions.

Construction Permitting

- Issues construction permits for projects.
- Reviews preliminary engineering reports and viability assessments.
- Assists systems and consulting engineers in selecting various treatment technologies for specific water quality problems.

Water Allocation and Use Permitting

- Allocates and tracks the withdrawal of water from Iowa's aquifers and surface waters.
- Issues and renews water use permits that are effective for ten years.
- Reviews water conservation plans.

Drinking Water Operator Certification

- Evaluates qualifications of the applicants to determine eligibility for examination.
- Certifies operators that successfully complete an electronic exam.
- Renews certification every two years of operators that earn continuing education units.

Environmental Laboratory Certification

- Certifies commercial and municipal laboratories that analyze compliance samples under the SDWA.
- Ensures that environmental analytical compliance data generated for the DNR are scientifically valid and defensible, and are of known and acceptable precision and accuracy.
- Contracts with the State Hygienic Laboratory to inspect environmental laboratories every two years and check the accuracy of annual proficiency testing samples.

Drinking Water State Revolving Loan Program (DWSRF)

- Makes low-interest loans to drinking water systems for construction of drinking water sources, treatment, storage and distribution systems to ensure public health and provide safe drinking water.
- Conducts environmental reviews.
- If there are more requests than funding, scores and ranks applications based on whether the projects addresses health risks, rule compliance, and infrastructure needs, including criteria for loan eligibility.
- During SFY 2023, the DWSRF signed loan commitments totaling over \$96 million. This included 28 construction loans (\$77 million) and 29 Planning and Design loans (\$19 million). Each loan amount ranged from \$25,000 to over \$12 million.

Iowa also provides a variety of assistance to PWSs through the following programs, funded through the state revolving loan fund set-asides:

Capacity Development

The DNR continues to implement a capacity development strategy to improve the financial, technical, and managerial capabilities of all PWSs. New systems must be considered viable before they start construction and begin operating. Existing systems are required to conduct self-assessments based upon various performance factors and may need to work with the department on areas determined to be deficient in order to retain viable status. The 2023 Report to the Governor on Iowa's Drinking Water Capacity Development Program can be found on our [Drinking Water Capacity Development program web page](#). The DNR has an e-mail newsletter, the Water Supply Listserv, written for operators on relevant topics of the day. The listserv is sent at least monthly to the subscribers, which numbered 33,505 people as of June 2023.

Area Wide Optimization Program (AWOP)

In this reporting year, Iowa's AWOP team members participated in quarterly AWOP meetings as well as the National AWOP meeting in Cincinnati, OH. One AWOP team member also participated in a training Comprehensive Performance Evaluation (CPE) hosted by the Kansas Department of Health and Environment. This was a microbial focused CPE event. Continued participation in these events offers valuable exposure and experience that can be applied to Iowa's program.

Team members continued to assist in the development of a comprehensive Surface Water Treatment Training program through a contract with Process Applications, Incorporated (PAI). The format of the modules consists of two days with the first day being in classroom learning and the second day in plant exercises. This training program integrates various optimization concepts related to operation, special studies and data integrity. In previous years, Module 1 (regulation), Module 2 (rules), Module 3 (flocculation) and Module 4 (filtration) were completed and piloted. In this reporting period, Module 5 (disinfection) was completed and piloted.

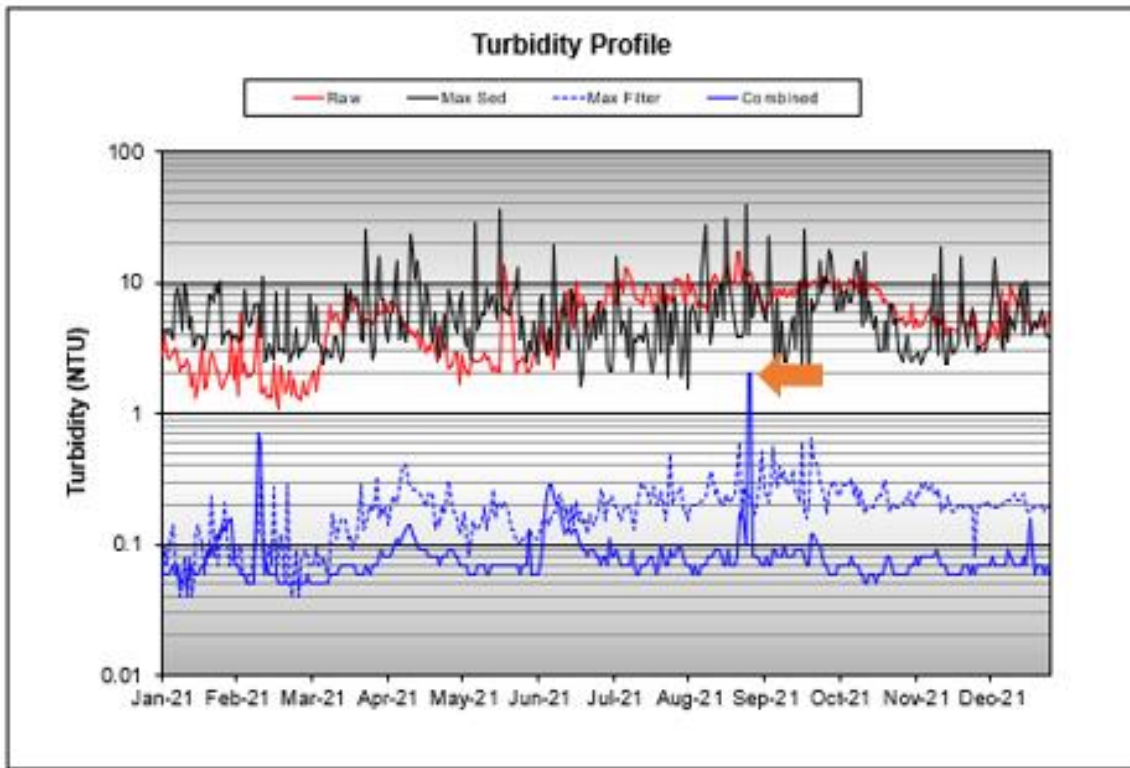

In November, the AWOP team delivered a Disinfection Data Integrity workshop at the Iowa City Water Treatment Plant. The event was attended by over 20 DNR Water Supply staff and operators from the host plant. The event utilized concepts from the Module 5 Surface Water Treatment Training.

The City of Osceola experienced severe drought and critically low water levels in their surface water source, West Lake, through and beyond Fall of 2023. Several unique long term and short-term solutions, including indirect wastewater reuse, were presented. The AWOP quarterly meetings and national network offered technical perspectives on alternatives rarely, if ever, presented in Iowa.

Presentations were delivered by team members on Instrument Data Integrity at Iowa Association of Municipal Utilities' Advanced Water Treatment Workshop as well as an EPA 4-State meeting on the various ways Iowa has integrated AWOP into our drinking water program.

Data from the Monthly Operating Reports (MORs) of Iowa's surface water treatment plants was entered into the AWOP Optimization Assessment Software (OAS) through 2022. This information is utilized to evaluate plant performance relative to AWOP goals and encourage optimization. These tools are also valuable in detecting data integrity issues. For

example, review of recent MOR/OAS data indicated two consecutive days in which a plant reported a CFE of 2.0 NTU. Upon further review, the MOR did note that the system had been doing work on some valves in the plant which caused the spike. So, the spikes were ultimately invalidated. However, the OAS review brought to light a possible data integrity issue of data capping. This can be seen in the associated graphics below. The AWOP team shared this data with the Field Office for further investigation. This example continues to underscore the value of the AWOP program and ongoing data integrity efforts.

Annual Data	Avg NTU	Min NTU	Max NTU	REQ	95% NTU	Opt Goal % Values	Req. % Values
Raw Turbidity	5.7	1.1	17.1	n/a	10.7	n/a	n/a
Max Settled Turbidity	6.2	1.6	38.4	0.02	15.3	1.6	n/a
Max Filtered Turbidity	0.19	0.04	0.65	0.01	0.34	16.2	n/a
Combined Filtered Turbidity	0.09	0.05	2.00	0.00	0.14	88.5	98.99

Looking forward to 2024, the AWOP team is planning to continue to invest in data integrity. A second data integrity training event is in the planning stages for 2024. Iowa is also moving forward with the development of an AWOP awards program that would recognize those systems that actively participate in Iowa’s AWOP program.

Source Water Protection

The first step in a multiple-barrier approach to drinking water protection is preventing contamination of drinking water sources. The source water delineation and contaminant source inventory assessments (Phase 1 plans) for new public water sources continued in 2023, which the systems may then use to develop their system-specific source water protection plans (Phase 2 plans). Four systems had their system-specific source water plans approved in 2023: Wapello Rural Water, Lake Panorama, Wesley, and Rathbun.

Technical Assistance Contracts

The DNR administers contracts for projects that provide technical assistance to water operators and to systems serving fewer than 10,000 persons.

Iowa's Public Water Supply Systems

Definition of a PWS

A PWS is a system that provides water to the public for human consumption, which includes drinking, handwashing, bathing, ice-making, dishwashing, food preparation, etc. The system must have at least 15 service connections or regularly serve an average of at least 25 individuals daily at least 60 days out of the year. An example of a system that is not a PWS would be a well serving a farmstead or rural home with 6 residents, which is considered to be a private water supply.

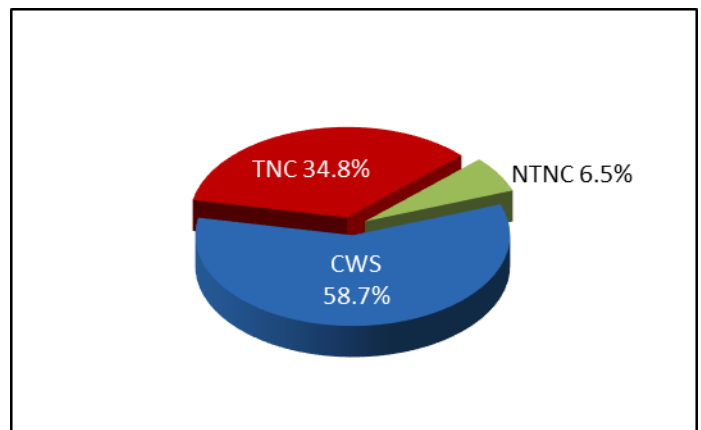

A PWS is further classified as a community water system, a non-transient non-community system, or a transient non-community system.

- A **community water system (CWS)** is a PWS that meets the above definition for year-round residents. Examples of CWSs include municipalities, unincorporated towns, subdivisions, and mobile home parks.
- A **non-transient non-community water system (NTNC)** is a PWS that regularly serves at least 25 of the same people four hours or more per day, for four or more days per week, for 26 or more weeks per year. Examples of these systems are schools, day-care centers, factories, and offices. Other service-oriented businesses, such as hotels, resorts, hospitals, and restaurants, are classified as NTNCs if they employ 25 or more people and are open for 26 or more weeks of the year.
- A **transient non-community water system (TNC)** is a PWS other than a CWS or NTNC that regularly serves at least 25 individuals daily at least 60 days out of the year. Examples of TNCs are highway rest areas, bars, restaurants with fewer than 25 employees, golf courses, camps, and parks.

PWSs in Iowa

Number of Systems and Population Served

In 2023, over 2.95 million Iowans were served by community PWSs, or 92.6% of the total state population (compared with the 2020 census of 3,190,369), with the remaining 7.4% of the population served by private water supplies at their residences. Iowa's 1,834 PWSs in 2023 included 1,076 CWS, 119 NTNC, and 639 TNC systems. The map depicting all of Iowa's active PWSs in 2023 is shown on the next page.

System Size

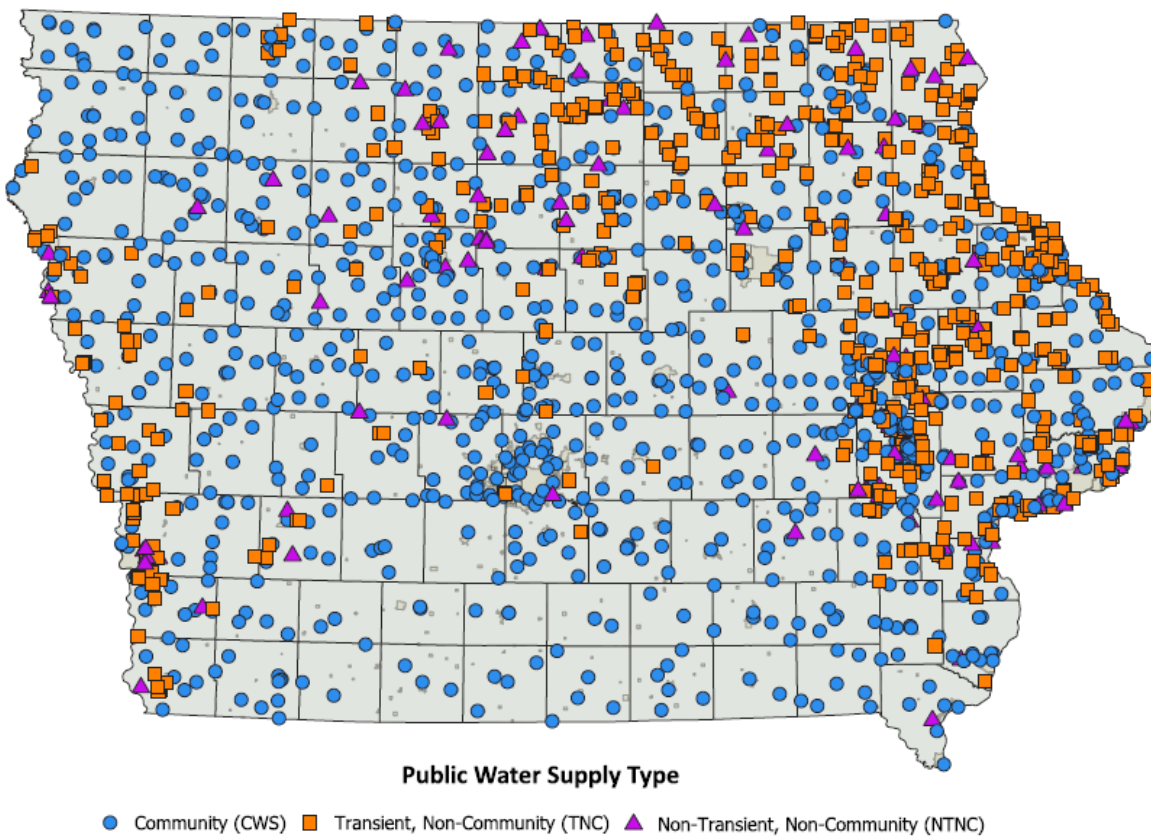

Iowa is a small-system state, as indicated in the following table, with 92.4% of our systems each serving fewer than 3,300 people.

Population Served	EPA Classification	Number of Iowa PWS	Percentage of Total Number of PWS	Total PWS Population Served
25 - 500	Very Small	1289	70.3	182,250
501 - 3,300	Small	406	22.1	497,973
3,301 - 10,000	Medium	90	4.9	504,961
10,001 - 100,000	Large	46	2.5	1,350,181
Over 100,000	Very Large	3	0.2	534,263
Total		1,834	100.0	3,069,628

In 2023, the number of PWSs in Iowa slightly decreased from 2022. Any system that was active for a single day during the year is included in that year's total.

Active Public Water Supplies In 2023

System Source Water

Iowa's drinking water is obtained from three sources:

- Groundwater from deep or shallow wells,
- Surface water from rivers, lakes, and reservoirs, and
- Groundwater that is under the direct influence of surface water as determined through testing by the presence of insects, bacteria, algae, pathogens, and/or significant and relatively rapid shifts in physical and chemical water characteristics.

Since a PWS can use any combination of water sources in its system, the PWS is classified by the source that is most vulnerable to contamination. Surface water systems are the most vulnerable to contamination, followed by influenced groundwater systems. Systems using surface water or influenced groundwater sources have more complex operational

and monitoring requirements than do groundwater systems, because of the greater treatment requirements of their source water.

As indicated in the following table, 92% Iowa's systems are served by groundwater sources, which serve 54% of the population. Surface water and influenced groundwater sources are used in the remaining 8% of systems, and serve 46% of the population.

Source of Water	Number of PWS	Percentage of Total PWS	Percentage of Total Population Served
Surface water	130	7.09	37.3
Influenced Groundwater	25	1.36	9.0
Groundwater	1,679	91.55	53.7

System Source Water in Iowa

Most of Iowa's PWSs are supplied by groundwater.

Population Served by the various Source Waters

Even though 92% of Iowa's systems use only groundwater sources, those systems serve only 54% of the population served by PWSs. The more populated areas of the state are generally served by surface water or influenced groundwater sources.

Maximum Contaminant Levels (MCLs) and Maximum Residual Disinfectant Levels (MRDLs)

All systems classified as public water supplies are required to test periodically for coliform bacteria, nitrate, and nitrite. Inorganic and organic chemical testing are only required in community and non-transient non-community systems. With the exception of chlorine, chloramines, chlorine dioxide, and confirmed total coliform bacteria, the contaminants are regulated by a specific MCL. An MCL is defined as the maximum permissible level of a contaminant in water that is delivered to any user of a PWS. Chlorine, chloramines, and chlorine dioxide are regulated by a MRDL, defined as the level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects. The presence of confirmed total coliform bacteria triggers the requirement for a self-assessment by the system, which if not conducted within the prescribed timeframe, is a treatment technique (TT) violation.

With both the MCL and MRDL, if the drinking water meets that limit for a specific contaminant, it is considered to be safe. Monitoring frequencies are increased if a contaminant is found, and ultimately the system is required to resolve situations when the water is determined to not meet the standards.

In this section, the requirements for each group of contaminants are described, including the type of violation, common sources of contamination, specific health effects, how a violation is incurred, and how the system returns to compliance. The rules pertaining to MCLs and MRDLs are listed in the Iowa Administrative Code 567—Chapters 40, 41, 42, and 43.

Contaminants posing an immediate risk to human health (“acute”)

There are four regulated contaminants that may pose an immediate, or acute, risk to human health if they are found in drinking water above the MCL: *E. coli*, nitrate, nitrite, or chlorine dioxide.

***E. coli* Bacteria - 567 IAC 41.2(1)**

Sources of Contamination: Total coliform bacteria are common in the environment and are generally not harmful themselves. The presence of *Escherichia coli* (*E. coli*) in drinking water is serious because the bacteria are usually associated with sewage or animal waste. The presence of these bacteria in drinking water generally is a result of a problem with the water treatment or the pipes which distribute the water, and indicates that the water may be contaminated with organisms that can cause disease.

Health Effects: At greatest risk are children, pregnant women, infants, elderly persons, and persons with compromised immune systems. Disease symptoms may include diarrhea, cramps, nausea, headaches, and fatigue. Chlorinating the drinking water will provide disinfection. Boiling water from the tap is also an effective method of sterilizing the drinking water.

Acute MCL: When total coliform bacteria are present in any sample, that sample is also analyzed for *E. coli*. Any confirmed *E. coli* sample is a violation of the MCL for *E. coli* bacteria. To meet this MCL, all drinking water samples must be free from these bacteria.

Violation: A PWS incurs a violation when the MCL is exceeded in any one monthly or quarterly compliance period. A violation of the *E. coli* bacteria MCL is an acute violation and public notification must be started within 24 hours of notification of the violation.

Compliance Achieved: The system returns to compliance after one monitoring period in which all required samples are collected as directed and all analytical results are negative.

Nitrate and Nitrite - 567 IAC 41.3

Source of Contamination: Nitrate and nitrite contamination can occur from several sources: the natural decay of organic materials such as leaves and crop residue, use of commercial fertilizers, contamination by human sewage and wastes from farm animals, and the nitrification of ammonia in the treatment and distribution system.

Health Effects: Excessive levels of nitrate and nitrite in drinking water can cause serious illness and sometimes death in infants less than six months of age. Nitrate converts to nitrite, which interferes with the oxygen-carrying capacity in the child's blood (methemoglobinemia or blue-baby syndrome). This is an acute disease because symptoms can develop rapidly in infants. In most cases, health deteriorates over a period of days. Symptoms include shortness of breath and blueness of the skin. Expert medical advice should be sought immediately if these symptoms occur. Elevated nitrate and nitrite levels may also cause adverse health effects in pregnant women through the risk of miscarriage and in people with specific metabolic diseases that increase the risk of methemoglobinemia. Boiling the water should not be done, since it will only concentrate the nitrates and nitrites. Alternative sources of water should be used, such as Food and Drug Administration-approved bottled drinking water with low levels of nitrate clearly listed on the label.

Acute MCL: The MCL for nitrate is 10 mg/L as N and the MCL for nitrite is 1.0 mg/L as N.

Violation: A system incurs a violation when the MCL is exceeded in any one compliance period, assigned either as a monthly, quarterly, or annual requirement. Violation of the nitrate or nitrite MCL is an acute violation.

Compliance Achieved: The system returns to compliance after two consecutive quarters in which all required samples are collected as directed and all analytical results are below the MCL.

Chlorine Dioxide - 567 IAC 41.6

Source: Chlorine dioxide is a chemical added to drinking water for the purposes of microbial disinfection and oxidation of dissolved organic carbon to reduce formation of disinfection byproducts.

Health Effects: Some infants and young children who drink water containing chlorine dioxide in excess of the MRDL could experience nervous system effects. Similar effects may occur in the fetuses of pregnant women who drink water containing chlorine dioxide in excess of the MRDL. Some people may experience anemia. Violations of the chlorine dioxide standard within the distribution system may harm human health based on short-term exposures. Certain groups, including fetuses, infants, and young children, may be especially susceptible to nervous system effects from excessive chlorine dioxide exposure.

Acute MRDL: The MRDL for chlorine dioxide is 0.8 mg/L as ClO₂, and only applies to those systems using chlorine dioxide in their treatment processes. An acute MRDL occurs when too much of the chlorine dioxide is applied during the treatment process at the treatment plant.

Violation: A system incurs an acute violation when the daily monitoring results in the distribution system exceeds the MRDL on the day following an elevated chlorine dioxide level at the entry to the distribution system.

Compliance Achieved: The system returns to compliance after two consecutive months in which all required samples are collected as directed and all analytical results are below the MCL.

Contaminants posing a long-term risk to human health ("chronic" or "non-acute")

Inorganic Chemicals - 567 IAC 41.3 (not including lead & copper)

Source of Contamination: Inorganic contaminants can leach into drinking water after dissolving from naturally-occurring minerals in the ground, or from runoff from industrial sources or landfills. Chlorite and bromate are byproducts of disinfection.

Health Effects: These contaminants may damage organs such as the kidneys and liver, damage the cardiovascular system and central nervous system, and are sometimes associated with high blood pressure and cancer. High levels of fluoride may cause dental and skeletal fluorosis.

Non-Acute MCL: Compliance with the MCL is determined based upon the sampling frequency:

- For systems collecting a sample every month or quarter, compliance with the MCL is determined using a running annual average.

- For systems collecting a sample annually or longer in frequency, compliance with the MCL is determined using the average of the initial sample and a confirmation sample.

Compliance with the chlorite requirements for systems using chlorine dioxide is determined from both source/entry point and distribution system samples.

For contaminants with an established Health Advisory (HA) level but no established MCL, the PWS is required to conduct public notification each quarter in which the HA is exceeded.

Violation: A PWS incurs a violation when the MCL is exceeded in the average of the required samples.

Compliance Achieved: The system returns to compliance after two consecutive monitoring quarters in which all required samples are collected as directed and all analytical results are below the MCL.

Organic Chemicals - 567 IAC 41.5 and 41.6

Organic chemicals are classified as a volatile organic chemical (VOC) or a synthetic organic chemical (SOC).

Sources of Contamination: Organic contaminants come from petroleum solvents, paint removers, degreasers, cleaning fluids, pesticides, gasoline, electrical transformers, manufacturing processes, chemical production, byproducts from disinfection, and the production of plastics. Agricultural runoff, improper waste disposal, and improper handling and storage techniques contribute to drinking water contamination via percolation of the contaminant through the soil into the groundwater.

Health Effects: These contaminants may damage organs such as the heart, liver, and kidneys, damage the central nervous and immune systems, and cause cancer.

Non-Acute MCL: Compliance with the MCL is determined based upon the sampling frequency:

- For systems collecting a sample annually or longer in frequency, compliance with the MCL is determined using the average of the initial sample and a confirmation sample.
- For systems collecting a sample every quarter, compliance with the MCL is determined using a running annual average.

For contaminants with an established HA level but no established MCL, the PWS is required to conduct public notification each quarter in which the HA is exceeded.

Violation: A PWS incurs a violation when the MCL is exceeded in the average of the required samples.

Compliance Achieved: The system returns to compliance after two consecutive monitoring quarters in which all required samples are collected as directed and all analytical results are below the MCL.

Radionuclides - 567 IAC 41.8

Source of Contamination: Alpha emitters, which include radium and uranium, occur naturally in certain groundwaters in the state due to the geological formations, particularly in the deeper aquifers. Beta emitters are usually the result of manmade sources or activities.

Non-Acute MCL: Compliance with the MCL is determined from the annual average of four quarters of sampling, either four separately analyzed samples or four temporally-composited aliquots in a single analyzed sample.

Health Effects: Radionuclide contaminants may cause cancer.

Violation: A PWS incurs a violation when the MCL is exceeded in the average of the required samples.

Map courtesy of Iowa Geological Survey

Compliance Achieved: The system returns to compliance after one monitoring period in which all required samples are collected as directed and all analytical results are below the MCL.

Disinfectants - 567 IAC 43.6

Disinfectants are chemicals added to the drinking water during treatment to provide disinfection at the treatment plant and in the distribution system. They are regulated by a MRDL, which is the maximum amount of disinfectant allowed in the system.

Health Effects: Health effects for chlorine and chloramines include irritating effects to the eyes and nose, stomach discomfort, and (chloramine only) anemia. Chlorine dioxide can cause nervous system effects and anemia. Similar effects may occur in fetuses of pregnant women who drink water containing chlorine dioxide in excess of the MRDL.

Non-Acute MRDL: Compliance with the chlorine and chloramine MRDL is determined from the annual average of twelve months of sampling. Compliance with the chlorine dioxide maximum residual disinfectant level is determined from the comparison of the source/entry point and distribution system samples to the MRDL. Chlorine dioxide can be either an acute (found in the distribution system at levels greater than the MRDL) or a non-acute health risk (only found at the treatment plant at levels greater than the MRDL), depending upon the duration and location of the elevated levels in the system.

Violation: A system incurs a violation for chlorine or chloramines when the MRDL is exceeded in the annual average of the required samples. A non-acute violation is incurred for chlorine dioxide when the source/entry point sample exceeds the MRDL for two consecutive days and the distribution system samples are all below the MRDL.

Compliance Achieved: The system returns to compliance after two consecutive monitoring periods in which all required samples are collected as directed and all analytical results are below the MRDL.

Water main installation using open trench construction (photos were provided by the system)

Action Level and Treatment Technique Requirements

Certain systems are required to meet action level and treatment technique requirements. All NTNC and CWS systems are required to comply with the lead and copper action levels. All systems meeting specific criteria are required to comply with the treatment techniques.

In this section, the requirements for each group of contaminants are described, including the type of violation, common sources of contamination, specific health effects, how a violation is incurred, and how the system returns to compliance. If the drinking water from these systems meets the stated requirements, it is considered to be safe.

Action Level (AL) Requirements

Lead/Copper Action Levels - 567 IAC 41.4

Action Level Exceedance: Lead and copper are regulated by action levels (AL) rather than MCL standards. Compliance with the AL is based upon the number of samples collected. The lead AL is exceeded if the concentration of lead in more than 10 percent of tap water samples collected during any monitoring period is greater than 0.015 mg/L (i.e., if the "90th percentile" lead level is greater than 0.015 mg/L). The copper AL is exceeded if the concentration of copper in more than 10 percent of tap water samples collected during any monitoring period is greater than 1.3 mg/L (i.e., if the "90th percentile" copper level is greater than 1.3 mg/L). If the AL at the 90th percentile is exceeded for either lead or copper, it represents a long-term risk to health.

Source of Contamination:

- Lead is a common metal found in lead-based paint, household dust, and certain types of pottery, porcelain, and pewter. It can be found in drinking water due to leaching from lead pipes, from lead solder on indoor plumbing, or from brass faucets and fixtures.
- Copper is often used to plumb residential and commercial structures that are connected to water distribution systems. Leaching of copper from these sources can result in contamination of the drinking water.

Health Effects: Infants and children who drink water containing lead in excess of the AL could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure. Copper is an essential nutrient but some people who drinking water containing copper in excess of the AL over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.

Violation: A PWS is out of compliance when the AL is exceeded for either lead or copper in any one compliance period, assigned either as a six-month, annual, or triennial requirement. Once the action level is exceeded, the PWS must conduct required lead public education if the lead AL was exceeded, collect water quality parameters, conduct a corrosion control treatment study, implement steps to control the corrosive characteristics of the water, and collect additional samples to demonstrate return to compliance with the AL standard.

Compliance Achieved: A system is returned to compliance when the sample results for two 6-month compliance periods are below the ALs for both lead and copper. This can take several years to accomplish due to the time needed to refine corrosion control processes, which is then followed by a year of sampling. Those results must be below the AL before the violation is considered to be compliance achieved.

Treatment Technique Requirements (TT)

EPA established TTs in lieu of MCLs to control unacceptable levels of some contaminants. For example, if a system using surface water or influenced groundwater exceeds the turbidity limit, does not meet the residual disinfectant requirements, or does not meet the disinfection contact time ratio (CT ratio), that system incurs a TT violation. The violation could be either an acute or a non-acute violation, depending upon the specific situation.

Total Inactivation CT Ratio - 567 IAC 43.5

All SW/IGW systems must determine their CT value on a daily basis.

- The CT in drinking water is determined by multiplying the disinfectant concentration by the amount of time that the disinfectant is in contact with the water. Each system must achieve a specific CT prior to the treated water entering the water distribution system. The amount of CT required depends on system configuration and water quality parameters, which include the pH and temperature of the water.
- Insufficient CT can allow disease-causing organisms such as *Giardia lamblia* or viruses to survive and thereby be distributed throughout the system.

Health Effects: CT has no health effects; however, insufficient CT levels can allow disease-causing organisms that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches to survive and enter the distribution system.

Violation: A system incurs a treatment technique violation when the CT ratio of actual CT compared to required CT is less than 1.0, and is insufficient.

Compliance Achieved: A system is returned to compliance when the CT ratio is sufficient and the residual disinfectant requirements have been met. The violation could be returned to compliance in the following month, or the time period could be longer, depending upon the action needed to correct the violation.

Disinfection Byproduct Precursor Removal - 567 IAC 43.6

All SW/IGW systems using conventional filtration treatment must determine the removal percentage of disinfection byproduct precursors (organic carbon) on a monthly basis. Failure to remove an adequate percentage is a treatment technique violation. There are alternative compliance criteria that may be used by the system if it is unable to remove the required percentage of total organic carbon. Compliance is determined on running annual average.

Health Effects: Total organic carbon has no health effects; however, it provides a medium for the formation of disinfection byproducts. These byproducts include trihalomethanes and haloacetic acids. Drinking water containing these byproducts in excess of the MCL may lead to adverse health effects, liver, or kidney problems, or nervous system effects, and may lead to an increased risk of getting cancer.

Violation: A system incurs a TT violation when the precursor removal percentage is insufficient and an alternative compliance criterion cannot be used.

Compliance Achieved: A system is returned to compliance when it can meet the precursor removal requirements.

Groundwater Rule - 40 CFR 141.400

All PWSs using groundwater (excluding IGW systems in Iowa) are required to comply with the federal Groundwater Rule. This rule requires microbial source water monitoring for groundwater systems that do not treat all of their water to a level of at least 99.99% (4-log) virus inactivation or removal. Influenced groundwater systems already meet the requirements of this rule because of the mandatory treatment requirements for that source water type. A positive routine total coliform bacteria sample in the distribution system triggers monitoring of the source water in each well that reasonably could have contributed to the positive sample. The source water sample is then analyzed for one of three fecal indicator organisms: *E. coli*, coliphage, or *Enterococci*. Significant deficiencies determined during a sanitary survey must be addressed and corrected within specified timeframes. Systems using approved 4-log virus inactivation or removal treatment in lieu of triggered source water monitoring must also conduct additional disinfectant residual compliance monitoring.

Health Effects: Persons at greatest risk to ill effects from microbial infection are children, pregnant women, infants, elderly persons, and persons with compromised immune systems. Disease symptoms may include diarrhea, cramps, nausea, headaches, and fatigue.

Violation: A system incurs a TT violation when there is a failure in the 4-log virus inactivation treatment or when a significant deficiency in the system is not addressed and corrected within the specified timeframes.

Compliance Achieved: A system is returned to compliance when it meets the required treatment criteria and addresses any significant deficiency that triggered a violation.

Mandatory Treatment - 567 IAC 43.2(5)

A system may be required to use a specific treatment process in order to comply with the MCL for a given contaminant, such as arsenic, coliform bacteria, fluoride, nitrate, or radionuclides. Failure to use that treatment on a continuous basis or as otherwise required in the system's operation permit, is a TT violation.

Health Effects: The health effects are those that are caused by the specific contaminant for which the treatment was required.

Violation: A system incurs a TT violation when the required treatment is not used.

Compliance Achieved: A system is returned to compliance when the treatment is used and all requirements have been met. The violation could be returned to compliance in the following month, or the time period could be longer, depending upon the action needed to correct the violation.

Residual Disinfectant (minimum) - 567 IAC 43.5

All SW/IGW systems must provide disinfection to provide inactivation or removal of 99.9% *Giardia lamblia* cysts and 99.99% viruses. The chlorine residual in drinking water is a measure of the amount of available chlorine in the water. It also allows the maintenance of an effective disinfectant agent throughout the distribution system.

- The disinfectant entering the distribution system (source/entry point after all treatment) cannot be lower than 0.3 mg/L free residual chlorine or 1.5 total residual chlorine for more than four hours.
- The disinfectant within the distribution system must meet the same minimums as at the source/entry point and cannot be undetectable in more than 5% of the samples each month for any 2 consecutive months. This also applies to heterotrophic plate counts (HPC) which can be measured in lieu of disinfectant monitoring. The HPC must be less than or equal to 500 colony forming units per milliliter of sample in order to have acceptable disinfectant residual.

Health Effects: Insufficient levels can allow disease-causing organisms that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches to survive and enter the distribution system.

Violation: A system incurs a treatment technique violation when the minimum required residual disinfectant levels are not maintained.

Compliance Achieved: A system is returned to compliance when the residual disinfectant requirements have been met. The violation could be returned to compliance in the following month.

Surface Water Treatment Rule, Interim Enhanced Surface Water Treatment Rule, and Long-term 1 Enhanced Surface Water Treatment Rule - 567 IAC 43.5, 43.9, and 43.10

This rule establishes criteria under which water systems supplied by surface water (SW) or groundwater under the direct influence of surface water (IGW), must filter and disinfect the water during the treatment process. These required TTs are in addition to the other requirements of groundwater systems. All SW/IGW systems have filtration treatment in Iowa.

Treatment Techniques: For purposes of this report, TTs are specified for SW/IGW systems to reduce or remove contaminants that must be monitored at the system and cannot be feasibly or economically measured in a laboratory. The definition of a TT is a treatment process that leads to a reduction in the level of a contaminant sufficient to meet drinking water standards. Examples of treatment techniques for SW/IGW systems are turbidity removal, maintenance of an adequate disinfectant residual, and sufficient disinfectant contact time.

Total Coliform Bacteria - 567 IAC 41.2(1)

All PWSs must comply with the total coliform bacteria monitoring rules. If a sample is confirmed positive for *E. coli*, it results in an acute *E. coli* MCL violation. If a sample is confirmed positive for total coliform only, it triggers a self-assessment of the entire system by the owner or operator, which is called a Level 1 assessment. Failure to complete or submit that assessment within the required timeframe is a TT violation. There are other scenarios when a TT violation is incurred, such as failure to fix the sanitary defect as scheduled, or for seasonal systems, failure to follow their startup procedure.

Source of Contamination: Total coliform bacteria are common in the environment and are generally not harmful themselves, but their presence in drinking water is serious because it indicates a pathway of contamination. The presence of these bacteria in drinking water generally is a result of a problem with the water treatment or with the pipes which distribute the water, and indicates that the water may be contaminated with organisms that can cause disease.

Health Effects: At greatest risk are children, pregnant women, infants, elderly persons, and persons with compromised immune systems. Disease symptoms may include diarrhea, cramps, nausea, headaches, and fatigue. Chlorinating the drinking water will provide disinfection. Boiling water in the home is also an effective method of sterilizing the drinking water.

Level 1 Assessment: Compliance with the total coliform bacteria standard is determined by the presence or absence of total coliform bacteria in a sample. Any confirmed total coliform sample, with no detection of *E. coli*, triggers the system to conduct a Level 1 Assessment, to find any sanitary defect in their system, and to fix any defect that is found.

Level 2 Assessment: A Level 2 Assessment, which is an onsite assessment of the system to determine any sanitary defects that could lead to microbial contamination, is conducted by DNR staff if a system has an acute *E. coli* MCL violation or has more than one Level 1 Assessment in a 12-month period.

Violation: A system incurs a violation when the trigger is exceeded in any one compliance period assigned either as a monthly or quarterly requirement and the system fails to conduct the Level 1 Assessment, fails to correct sanitary defects in a timely manner, or is a seasonal system that has failed to conduct its required startup procedure. The violation is a TT violation.

Compliance Achieved: The system returns to compliance after a missing report is submitted, any found defect is repaired followed by one monitoring period in which all required samples are collected as directed, and all analytical results are negative for coliform bacteria.

Turbidity - 567 IAC 43.5, 43.9, and 43.10

Treatment Technique: All SW/IGW systems, regardless of size, must meet the TTs for turbidity. Turbidity, or cloudiness, of drinking water is a measure of the tiny particles suspended in the water that can interfere with disinfection and testing for bacteria. It can also prevent maintenance of an effective disinfectant residual throughout the distribution system. Systems are required to remove 99% (2-log) of the *Cryptosporidium* oocysts through filtration. In addition, systems using conventional or direct filtration must meet the following two TTs for turbidity:

- the turbidity level of representative samples of a system's filtered water must be less than or equal to 0.3 NTU in at least 95% of the measurements taken each month, and
- no single sample result may exceed 1 NTU.

Sources of Contamination: The major source of turbidity contamination is soil runoff.

Health Effects: Turbidity by itself has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms such as bacteria, viruses, and parasites such as *Giardia lamblia* and *Cryptosporidium* that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches, and can result in death.

Violation: A PWS incurs a TT violation when either standard is exceeded in any month.

Compliance Achieved: A system is returned to compliance when turbidity results consistently meet the standards.

High capacity pumps

New well, not yet in service

Violation Data for Health-based Standards: MCL, MRDL, AL, and TT

Approximately 3.06 million people received water served by Iowa PWSs in 2023 that complied with all health-based standards, including MCL, MRDL, AL, and TT standards. In 2023, 99.5% of the population served by community PWSs received water that met all drinking water standards adopted by the department, and 97.2% of community PWSs met all drinking water standards.

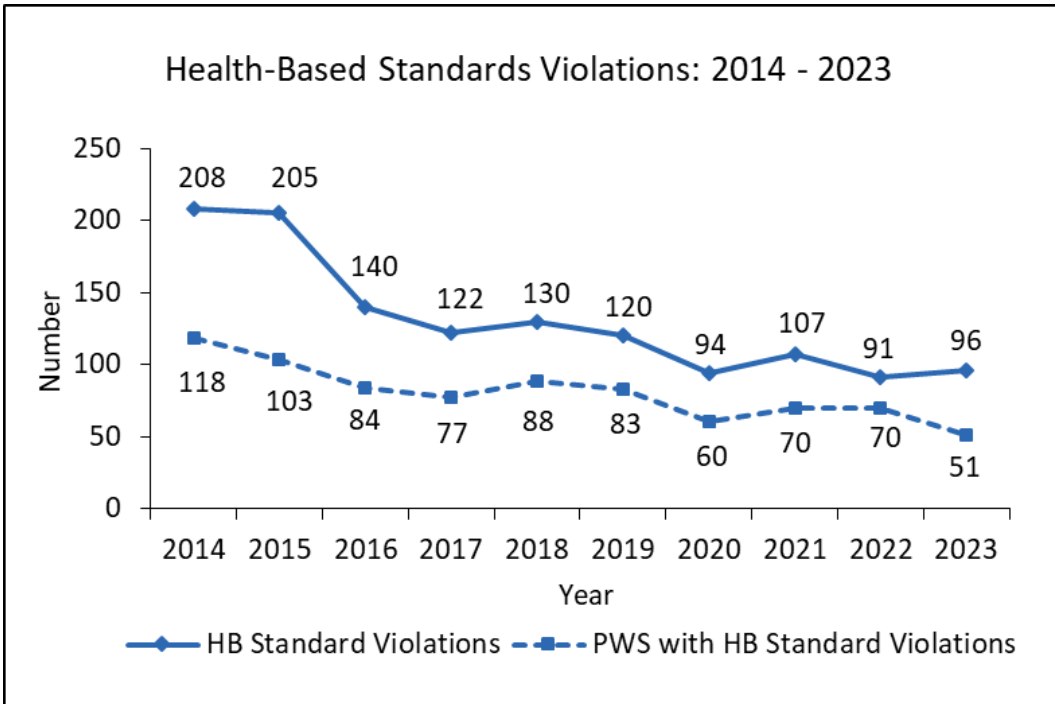

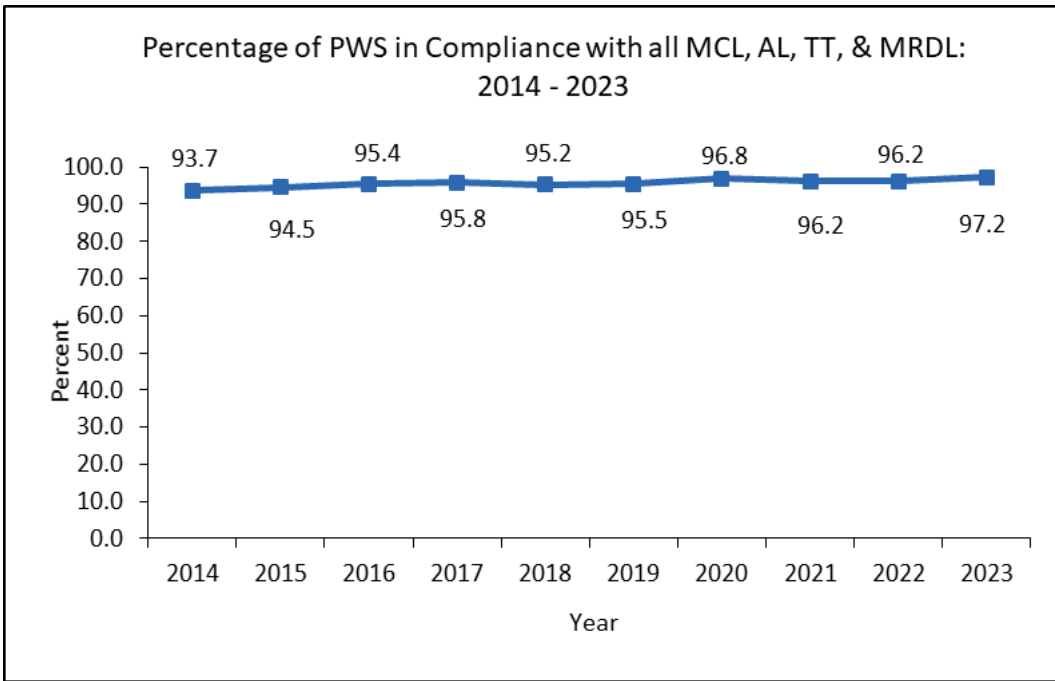

Of the 1,834 regulated PWSs in Iowa, 97.2% were in compliance with all MCL, MRDL, AL, and TT standards. There were 51 PWSs that had at least one violation of an MCL, AL, MRDL, or TT standard. There were 96 violations of ten contaminants and four TTs in 2023, as indicated in the following table. The most frequent standard that was not met in Iowa in 2023 was failure to meet the Nitrate MCL.

Analyte	Number of PWS	Number of Violations	Percentage of the Total Number of Violations	Number of Samples Collected in 2023	System Population*
Arsenic	3	8	8.25	285	508
Chlorine	1	1	1.03	Not Applicable	60
Copper	1	1		4,716	95
Escherichia coli Bacteria	7	7	7.22	31,548	1346
Failure to Conduct Level 1 Assessment (RTCR) TT	5	5	5.15	Not applicable	320
Failure to conduct Start-up Procedures (RTCR) TT	19	23	24.74	Not applicable	2466
Lead	1	1	1.03	4,717	802
Minimum Disinfectant Residual	2	2	2.06	Not applicable	793
Nitrate nitrogen	7	38	39.18	3,601	528
Nitrite nitrogen	3	4	4.12	1,822	511
Radium 226 & 228	1	3	3.09	190	395
Total Trihalomethanes	2	2	2.06	1,801	4724
Turbidity TT	1	1	1.03	Not applicable	1822
Total:	53**	96	100%		14,370**

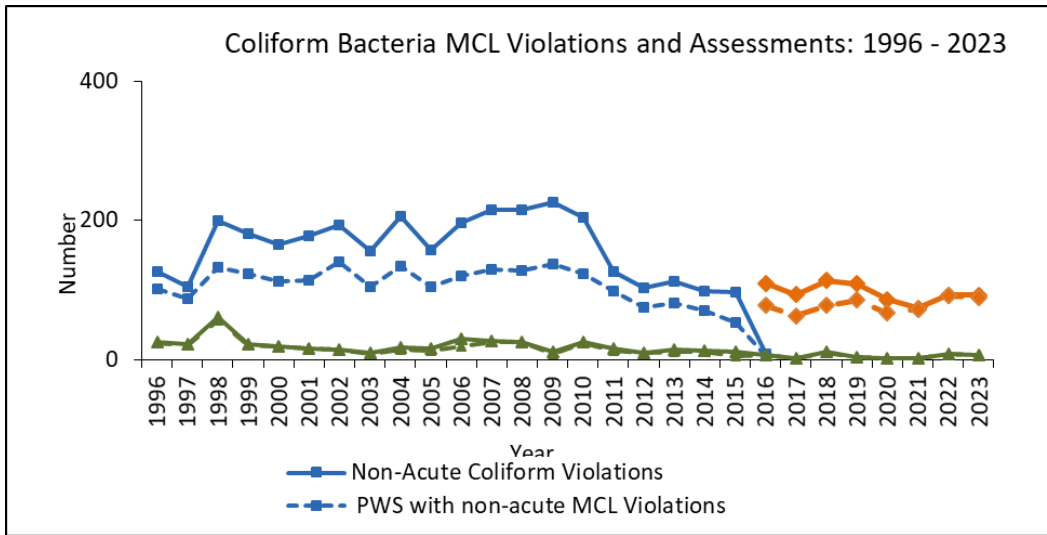

*The population for a system with multiple violations in a single category was only included once in this total.

**Each PWS is only included once in the total, even though they may have multiple violations. Likewise, the population of a system is only included once in the system population total, even though multiple violations may have occurred in a system.

The number of PWSs in compliance with all health-based standards is slightly higher than last year, as shown in the following chart. The average compliance rate over the ten-year period is 95.6%.

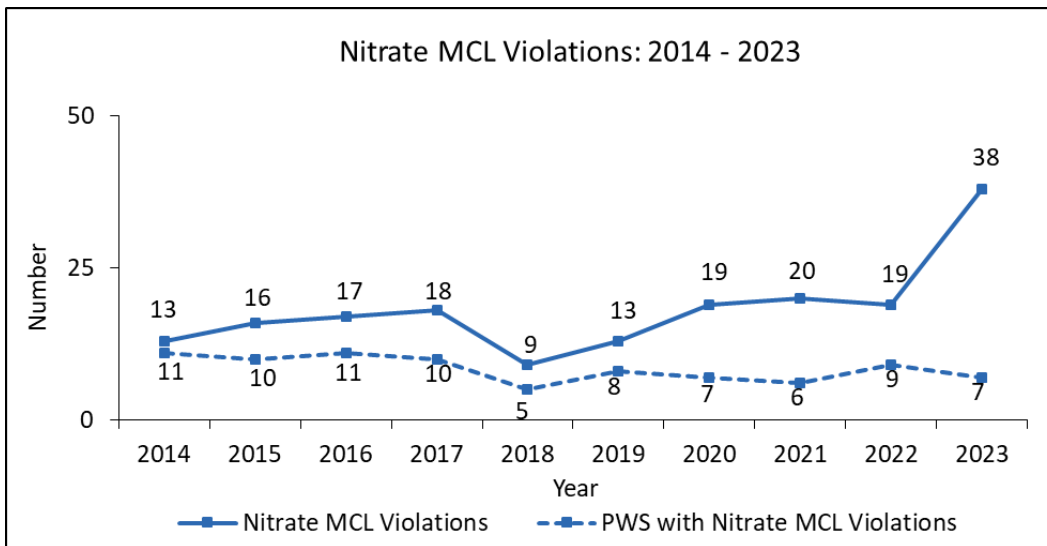

This is the seventh full year that the Revised TCR (RTCR) was in effect, and there were two types of RTCR TT violations that resulted in 27 TT violations at 23 systems: 19 seasonal systems failed to complete their start-up procedures (including a bacteria-free compliance sample) before they opened to the public, and 4 systems failed to conduct the required Level 1 Assessment and incurred 4 TT violations. The Level 1 Assessment replaces the former TCR's non-acute coliform bacteria MCL violation. If a system conducts the required Level 1 Assessment under the RTCR, there is no violation. Failure to conduct the Level 1 Assessment within the required timeframe results in a TT violation.

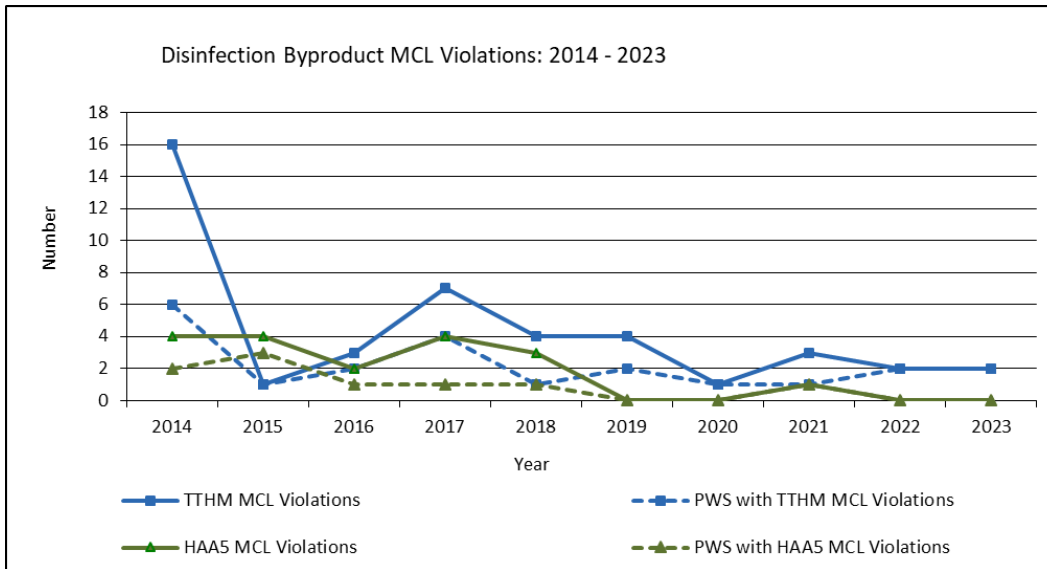

Effective April 1, 2016, the non-acute coliform bacteria MCL violation under the TCR was replaced under the RTCR with Level 1 and/or Level 2 Assessments, which are not violations. If the required Level 1 and 2 Assessments are included, the numbers are similar between the previous seven years.

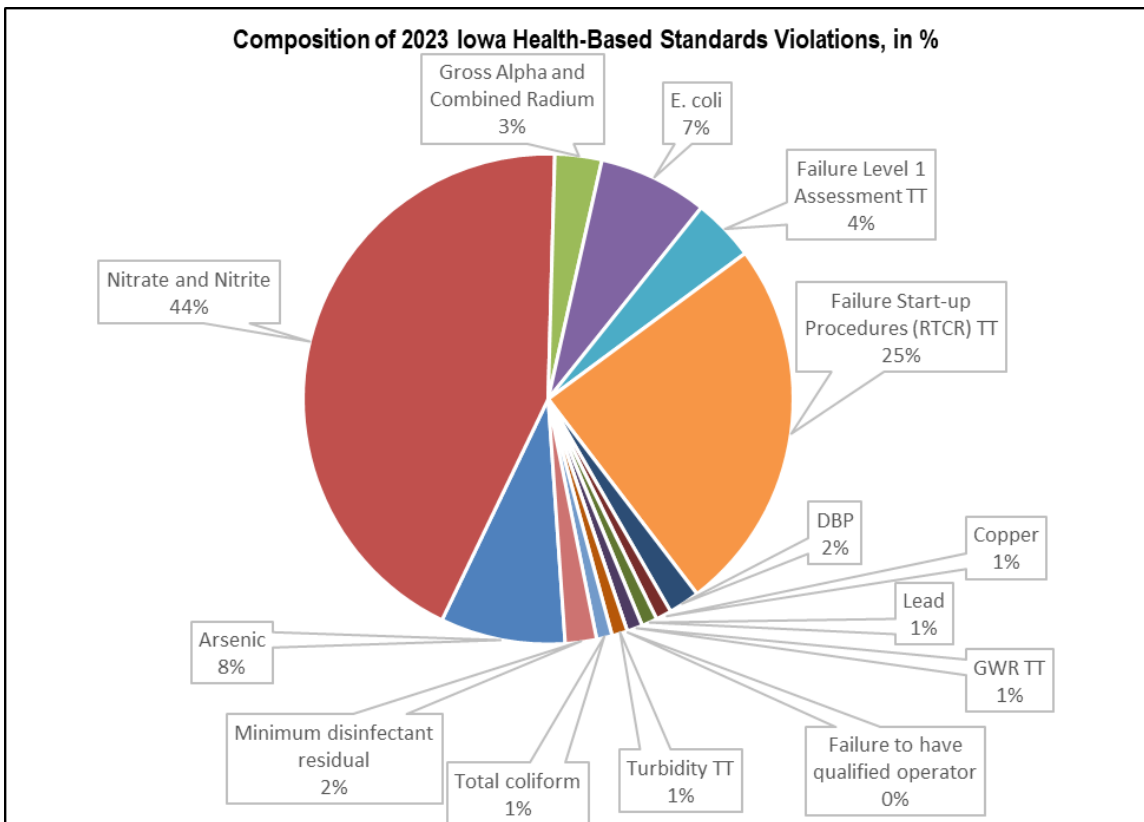

In 2023, the number of nitrate MCL violations increased while the number of systems with violations decreased from 2022. In 2023, 68% of the nitrate MCL violations occurred at three systems, accounting for the majority of increase in violation number. These systems have all subsequently installed additional treatment or developed new sources in order to remediate the problem.

Under the federal Stage 1 Disinfectants/Disinfection Byproducts Rule (DBPR), large systems were required to start monitoring for disinfection byproducts in 2002, with medium and small systems starting in 2004. Usually a system monitors for a year before an MCL violation can occur, so the first violations began respectively in 2003 and 2005. After peaking in 2005, systems implemented various techniques to reduce the levels of disinfection byproducts formed in the distribution systems. In the last quarter of 2012, the Stage 2 DBPR compliance monitoring calculation changed for the largest system category from a system-wide running annual average to a locational running annual average. The remaining three categories of systems were phased into the new compliance calculation by the second quarter of 2014, and there were increased numbers of violations under the new compliance calculation method. In 2023, there were two systems that had two total trihalomethanes violations.

In 2023, violations of the of the Nitrate and Nitrite MCLs are the largest proportion of health-based standard violations.

Major Monitoring & Reporting Violations

Monitoring and Reporting (M/R) violations for this report were based on the guidelines briefly described in the next table. EPA deems these violations to be classified as major violations. Minor monitoring violations are those in which at least some of the required monitoring was completed. They are not listed in this report. Systems are assigned the monitoring requirements for each contaminant in an operation permit that is issued at least every three years. The monitoring requirements vary by contaminant, from sampling every four hours (turbidity) to sampling once every nine years (inorganic chemicals). The specific requirements are listed in the Iowa Administrative Code (567) Chapters 41, 42, and 43.

Monitoring Guidelines by Rule

Rule	Violation Type	Description
Revised Total Coliform Rule and Groundwater Rule	M/R, Routine Major	No samples collected during a compliance period
	M/R, Repeat Major	No follow-up samples collected after a positive sample. The Revised TCR (4/1/2016) eliminated repeat major violations.
Surface Water Treatment Rule, Interim Enhanced Surface Water Treatment Rule, Long-term 1 Enhanced Surface Water Treatment Rule	M/R, Routine Major	Collected less than 10% of samples required during a compliance period
Lead and Copper Rule	M/R Routine Tap	Failure to collect the required tap samples, failure to follow the sampling plan, or failure to submit the associated report.
Phase I, II, IIB, and V Rules (Inorganic and Organic chemicals)	Regular Monitoring	Failure to collect any required samples
Stage 1 & Stage 2 Disinfectants & Disinfection Byproducts Rules	M/R, Routine Major	Failure to collect any required samples
Radionuclides	M/R, Routine Major	Failure to collect any required samples

Out of Compliance: A violation is incurred when the PWS fails to collect samples, fails to use approved sampling locations, fails to have the samples analyzed, or fails to report the analytical results from the required samples in any one compliance period. One violation is issued for each analyte when samples are not collected, analyzed, and reported in accordance with the system's operation permit.

Compliance Achieved: A system is returned to compliance when the samples are collected as required and the results are reported to the DNR.

New filters waiting to be installed

Major Monitoring and Reporting (M/R) Violation Data

Over 2.88 million people received water served by Iowa's systems that met the major monitoring and reporting requirements. Of the 1,834 regulated PWSs in Iowa, 80.4% (1,475 PWSs) were in compliance with all major monitoring and reporting requirements. There were 359 PWSs serving a total population of 234,714 that incurred 952 major monitoring and reporting violations in 2023. The DNR assigns violations by contaminant for each system, which can result in a single system incurring several monitoring violations.

Listed below are the contaminants with a major monitoring violation or a reporting violation in 2023. The majority of violations were for failure to collect coliform bacteria and nitrate samples, which are the two contaminants that are required to be sampled by all systems each year.

Contaminant or Reporting Requirement	Number of PWS	Number of Violations	Population Affected*
Monitoring			
Ammonia Nitrogen	3	3	1,724
Antimony	1	1	4,570
Arsenic	1	1	4,570
Barium	1	1	4,570
Beryllium	1	1	4,570
Cadmium	1	1	4,570
Chlorite	1	2	2,104
Chromium	1	1	4,570
Copper	18	19	12,075
Cyanide	1	1	4,570
E. coli (GWR source)	24	30	2,585
Fluoride	1	1	4,570
Gross alpha, excluding Rn & U	4	4	31,561
Haloacetic Acids	20	20	11,207
Lead	18	19	12,075
Manganese	9	9	6,070
Mercury	1	1	4,570
Metals	36	66	58,669
Nitrate	58	81	22,150
Nitrite	13	15	45,795
PFOA	1	1	3,130
PFOS	1	1	3,130
Radium 226 & 228	8	10	36,144
Selenium	1	1	4,570
Sodium	2	2	5,081
Synthetic Organic Compounds	3	25	32,139
Thallium	1	1	4,570
Total Coliform Bacteria	146	256	28,983
Total Organic Carbon	1	2	2,104
Total Trihalomethanes	20	20	11,207
Volatile Organic Compounds	6	65	32,810

Contaminant or Reporting Requirement	Number of PWS	Number of Violations	Population Affected*
Water Quality Parameters	1	1	237
Monitoring Total:	251*	596	197,480*
Reporting			
Failure to conduct PN	120	255	24,468
Failure to consult with DNR (GWR)	1	1	3,345
Failure to have a certified operator	4	4	506
Failure to issue CCR	23	23	5,825
Failure to issue Lead Consumer Notice	11	11	5,151
Failure to obtain construction permit	2	2	1,126
Failure to submit a MOR or MRDL	43	52	12,442
Failure to meet compliance schedule	2	2	1,731
TCR recordkeeping violation	4	6	1,603
Reporting Total:	188*	356	51,357*
Monitoring & Reporting Total:	359**	952	234,714**

*The population of each PWS is only counted once for each contaminant.

**Each system with a violation is only included once in the number of systems total and the affected population total.

***Includes nitrate operations report violation and lead 90th percentile violation.

Monitoring & Reporting Compliance Rates: 2014 - 2023

The percentage of PWS in compliance with all major monitoring and reporting requirements was 80.4% in 2023. The number of PWSs in compliance with all major monitoring and reporting requirements averages 82.1% over the past ten years.

In 2023, the number of monitoring and reporting violations, and the number of systems with those violations slightly increased from 2022.

Enforcement Actions

Any time a system incurs a violation, enforcement actions are taken. All systems are issued a notice of violation (NOV), which requires that the public be notified about the violation and any possible health effects. Operation permits are used to list the monitoring and reporting requirements, and also any compliance schedule that the system must meet in order to remedy a violation. The operation permit is termed a "bilateral compliance agreement" or BCA, because the system has a legal right to appeal the document for 30 days, after which time it is binding.

If a system is unable or unwilling to mitigate a violation, an administrative order (AO) is the next enforcement action. An AO may be issued with a monetary penalty or without a monetary penalty. The next level of escalation in enforcement actions is to refer the system to the Iowa Attorney General for enforcement. A system may be referred to EPA for enforcement.

All violations remain "open" until the system satisfies the requirements to return it to compliance. In the case of a monitoring violation, returning to compliance may be as simple as collecting the sample that was missed and conducting public notification. In the case where a system has an ongoing health-based standard violation, the system may have to install treatment processes to be able to successfully remove the contaminant from the water. These types of situations can take many months to remedy, and the system is required to conduct public notification at intervals throughout the time period when it is not in compliance with the health standard.

The DNR tracks the corrective actions for all violations at all PWSs. All violations and corrective actions are reported to EPA. When the criteria for compliance are met, the specific violation is coded "Compliance Achieved". Failure to achieve compliance in a timely manner may result in the issuance of an administrative order. These are the most commonly used enforcement actions:

- NOV issued: A notice of violation has been issued to the system by the department.
- PN requested: Public notification for the violation must be done by the system.
- PN received: Public notification has been done by the system and a copy has been received by the department.
- BCA issued: A bilateral compliance agreement between the system and the department has been issued.
- AO w/Penalty: An administrative order with a penalty has been issued by the department.
- AO w/o Penalty: An administrative order without a penalty has been issued by the department.
- AG Case Referred: The system has been referred to the Attorney General's Office for enforcement action.
- EPA Consent Order: The system has an enforcement order with EPA.
- Compliance Achieved: The system is now in compliance and the specific violation is "closed".

Most violations have a predefined set of enforcement actions, which include the following four actions at a minimum: notice of violation issued, public notification requested, public notification received, and compliance achieved. Once the PWS has successfully met the compliance achieved criteria, the system is returned to compliance in the department's computerized tracking system.

Variations and Exemptions

Iowa does not use the variance and exemption allowances from EPA.

Public Notification, Lead Public Education, and Consumer Confidence Report - 567 IAC Chapter 42

The SDWA requires a system to notify both the people who consume the system's water and the Department whenever the following violations occur:

- A MCL has been exceeded
- A MRDL has been exceeded
- A required TT has not been achieved
- The lead or copper AL is exceeded in at least 10 percent of the tap water samples
- A groundwater sample tested positive for a fecal indicator organism after the triggering positive routine coliform bacteria sample was collected in the distribution system
- A Compliance Schedule has not been met
- An EPA Lifetime HA has been exceeded
- A waterborne emergency has occurred
- A certified operator has not been retained for CWS and NTNC systems
- Other situations where the department determines that public notification is needed

MCL, MRDL, or Treatment Technique Violation

To comply with the MCL, MRDL, and TT public notification requirements, the PWS must:

- Notify the department within 48 hours after the violation occurred (24 hours for acute violations);
- Notify the consumers by the required public notification procedures; and
- Provide proof of such public notice including a certification to the department.

Monitoring or Reporting Violation

All PWSs must issue public notification for failure to:

- Monitor and report the required data to the department;
- Comply with established testing procedures; or
- Meet the public notification requirements.

Public Education for a Lead Action Level Exceedance

A PWS must notify the DNR and the population served by the PWS when the 90th percentile exceeds the AL for lead. This lead public education requires that mandatory language be provided to the consumers every twelve months as long as the action level is exceeded, in the following forms for community systems:

- Newspaper announcement;
- Pamphlets and brochures to doctors, clinics, schools, daycare facilities, etc.;
- Attachments to customers' water bills;
- A notice printed directly on the water bill; and
- A public service announcement must be issued to television and radio for broadcasting.

In addition to the annual notice, a public service announcement must be issued every six months to local television and radio broadcast outlets. NTNC systems have notification requirements that include posting at the facility plus additional requirements depending upon the composition of their population.

Consumer Confidence Reports

All CWS must notify the public by July 1 of every year with information on the quality of the water delivered by the system in the previous calendar year, and to characterize the risks (if any) from exposure to contaminants in the drinking water. This report, called a Consumer Confidence Report (CCR) or a Water Quality Report, must be prepared by each CWS and made available to their public. The CCR must include the following information:

- Source water information
- Definitions of terms used in the report

- Information on detected contaminants (if any were detected), including mandatory language and additional health information where applicable
- Whether the system is not in compliance with any other requirement, including monitoring, public notification, operation, administrative order, or operator certification

Each CWS must mail or otherwise directly deliver one copy of the report to each customer. Mailing waivers are issued to CWS having fewer than 10,000 persons, provided the system had no violations for the covered calendar year. A CWS serving fewer than 500 persons and having a mailing waiver is allowed to publicly post their CCR.

In 2023, 23 CWS failed to prepare and distribute their CCR for calendar year 2023. Each CWS received a reporting violation for this failure. The CCR compliance rate for Iowa's CWS in 2023 was 97.9%.

Lead Consumer Notice

The CWS and NTNC systems are required to provide a Lead Consumer Notice to those consumers who occupy homes or buildings that are part of the system's lead & copper monitoring program. The Notice must be provided within 30 days of the system's receipt of the analytical results, and must include specific mandatory language as well as the analytical lead result from the water sample collected at that home or building.

Health Effects

If a public notification or public education requirement is not met, the public health is placed at risk because the public is unaware of the potential health effects of the water being consumed. Children, pregnant women, the elderly, and persons with compromised immune systems are at the greatest risk from most contaminants.

Public Notification or Public Education Violation

A system is in violation of the public notification or public education rules when it does not issue public notification specific to its violation and does not provide proof of notification to the DNR. A system is returned to compliance when it publishes the appropriate public notification or public education language within the required amount of time and provides the proof to the DNR.

Operator Certification - 567 IAC Chapter 81

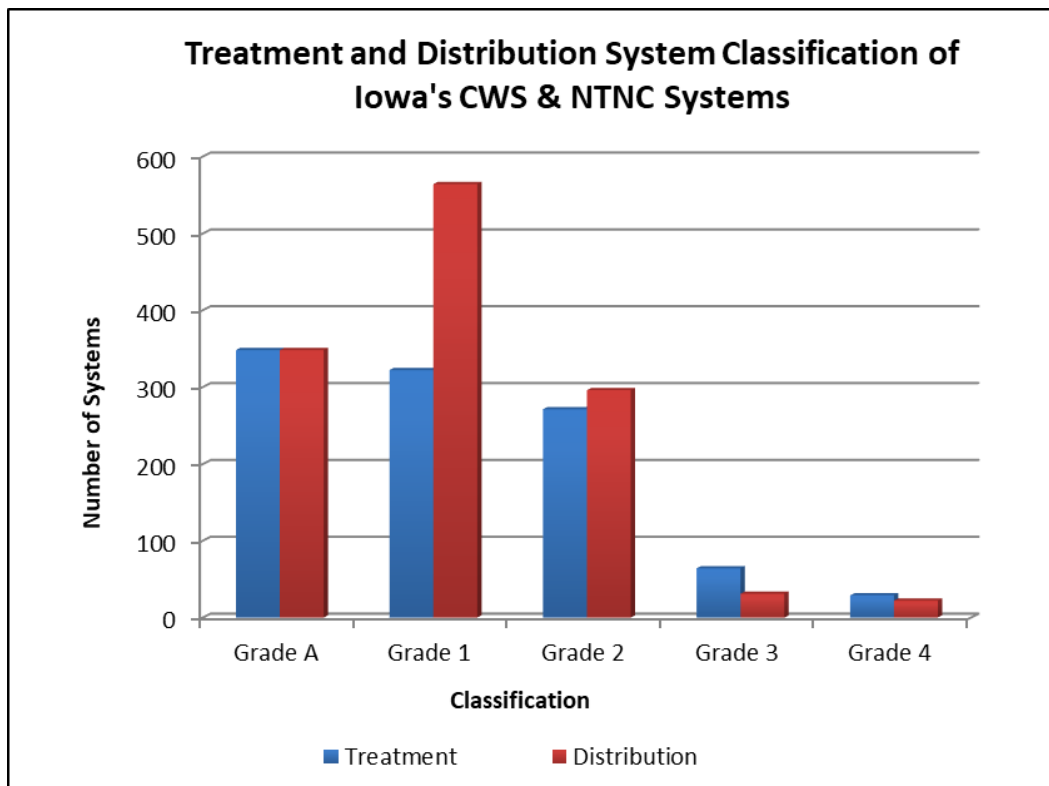

All CWS and NTNC systems are required to have a certified operator in direct responsible charge of the water treatment and water distribution systems. The operators must be certified by the department at the same classification of the treatment plant or water distribution system at a minimum.

The Iowa Operator Certification Program reporting period for this report is July 1, 2023 through June 30, 2024. Data is as of 6/19/2024.

Classification of Systems and Facilities

Beginning in 2002, all CWS and NTNC were required to designate a certified operator in direct responsible charge of the water treatment and water distribution systems. The facilities are classified according to complexity, with Grade 4 being the most complex. Listed below are the Iowa CWS and NTNC systems in all classification levels, as of June 19, 2024. There are 227 systems that have a distribution system but no treatment plant.

Classification	Treatment Facility	Distribution Facility
Grade A	348	348
Grade 1	322	564
Grade 2	271	296
Grade 3	64	31
Grade 4	29	22
Total	1,034	1,261

Classification Grades for Operator Certification

The Iowa Operator Certification program is predicated on three principles: Education, Experience, and Examination. A certified drinking water operator in Iowa must meet these requirements:

1. Meet the initial education and experience requirements and pay the examination fee,
2. Successfully pass the examination for the specific type of certification, and

- Maintain the certification by successfully attaining the required continuing education hours or credits during each two-year certification period and paying the bi-annual certification fee.

The requirements are based upon the level of complexity of the various facility grades, with Grade A being the least complex and Grade 4 being the most complex.

Certification Grade	Number of certified Water Distribution Operators	Number of certified Water Treatment Operators
Grade A	220 (combined WT and WD)	
Grade 1	707	848
Grade 2	799	820
Grade 3	244	324
Grade 4	235	237

The following chart depicts the makeup of the two types of drinking water certifications. Note that Grade A is included in both certifications, since it is a combined water distribution and water treatment certification.

Enforcement

Compliance actions were directed at four certified operators in 2023.

Certification Renewal

Drinking Water Treatment and Water Distribution Operator Certificates are renewed every two years, with the most current renewal period ending on June 30, 2023. In order to renew, the continuing education hours required by the level of certification an operator holds must be fulfilled by March 31st of the year a certificate expires. Operators holding a

Grade A, 1, or 2 certificate must earn 10 contact hours of continuing education in the renewal period. Operators holding a Grade 3 or 4 certificate must earn 20 contact hours.

Laboratory Certification - 567 IAC Chapter 83

Purpose & Certification

The purpose of a certification program is to ensure that environmental analytical compliance data generated for the DNR are scientifically valid and defensible, and are of known and acceptable precision and accuracy. Any laboratory submitting environmental compliance data to the department must be certified. Certification is based on a two-year period, and laboratories must submit a completed application and pay the fee before an onsite audit can be scheduled. DNR allows for certification by reciprocity if the laboratories meet Iowa certification requirements. Laboratories include commercial and municipal laboratories.

Auditors

The department contracts with the State Hygienic Laboratory (SHL) at the University of Iowa to conduct audits of laboratories. Auditors, also known as certification officers, must successfully pass the Chemistry or Microbiology Certification Officer Training Course by EPA in order to conduct drinking water audits. SHL serves as the State Primacy Laboratory for Iowa.

SDWA Laboratories Certified by Chemical Group

A drinking water laboratory is considered a "SDWA" laboratory if they are certified and actively submitting compliance data to the department. The table below represents active SDWA laboratories as of December 31, 2023. Forty-five labs are certified and submitting compliance data in Iowa.

Chemical Group	In State	Out of State	Total
IOC	12	5	17
VOC	3	4	7
SOC	5	2	7
RADS	1	2	3
ASBESTOS	0	3	3
Micro	39	3	42

Enforcement

The DNR entered into a consent order with one laboratory in 2023. The laboratory has been recertified and a follow-up inspection will be conducted in June of 2024.

Backup generator, providing power to the water treatment plant or wells in the event of a power outage

Abbreviations

AG	Attorney General of Iowa
AL	action level
AOP	administrative order with penalty
AOWP	administrative order without penalty
BCA	bilateral compliance agreement
CCR	consumer confidence report
CT	contact time
Cu	chemical symbol for copper
CWS	community public water supply
DNR	Iowa Department of Natural Resources
EPA	U.S. Environmental Protection Agency
FDA	U.S. Food and Drug Administration
GW	Groundwater
GWR	Groundwater Rule
IGW	groundwater under the direct influence of surface water or influenced groundwater
HA	Health Advisory
HAA5	haloacetic acids (5)
HPC	heterotrophic plate count
IAC	Iowa Administrative Code
IOC	inorganic chemical
LSL	lead service line
MCL	maximum contaminant level
mg/L	milligrams per liter
MOR	monthly operation report
M/R	Monitoring and Reporting
MRDL	maximum residual disinfectant level
mrem/yr	millirems per year
NOV	Notice of Violation
NTNC	non-transient non-community public water supply
NTU	nephelometric turbidity units
Pb	chemical symbol for lead
pCi/L	picocuries per liter
PE	public education for Lead
PN	public notification
PWS	public water supply system
PWSSP	Public Water System Supervision (EPA program)
Rn	chemical symbol for radon
RTCR	Revised Total Coliform Rule (replaced the TCR in April 2016)
SDWA	Safe Drinking Water Act
SDWIS/FED	Safe Drinking Water Information System/Federal (EPA's electronic database)
SOC	synthetic (nonvolatile) organic chemical
SW	surface water
SWTR	Surface Water Treatment Rule
TCR	Total Coliform Rule

TNC	transient non-community public water supply
TT	treatment technique
TTHM	total trihalomethanes
U	chemical symbol for uranium
V/E	variance or exemption
VOC	volatile organic chemical
WD	water distribution
WT	water treatment
WQP	water quality parameters

Distribution of this Report

The SDWA requires both summary and detailed reports from the State be accessible to the EPA and the public. The following options are utilized to make this report readily available to the public.

The DNR sends the detailed report to the EPA Headquarters (water.compliance@epa.gov) in Washington, DC, and the EPA Region 7 Office in Lenexa, KS.

The DNR also:

- Includes the report on the DNR Internet website where it available for download: www.iowadnr.gov/WS-Annual-Compliance-Report
- Publishes a notice of report availability in the Water Supply Listserv
- Archives the report in the State Library
- Makes the report available for individuals and organizations upon request

Appendix A: EPA Violations Summary Report

The EPA Violations Summary Report listed in this appendix is a numerical total of the violations of each contaminant required under the SDWA and is a required report element. This report lists the number of violations of each contaminant categorized by both MCL/MRDL/TT Violations and major federal Monitoring & Reporting Violations. State violations, such as failure to obtain a construction permit, are not included in this summary report.

Legend

Column (from left to right)	Description of Heading
1	The first column identifies the contaminant name
2	The second column identifies the MCL for that contaminant
3	The third column identifies the number of MCL violations for that contaminant
4	The fourth column identifies the number of PWSs with MCL violations for that contaminant
5	The fifth column identifies the number of TT violations
6	The sixth column identifies the number of PWSs with TT violations
7	The seventh column identifies the number of M/R violations for that contaminant
8	The eighth column identifies the number of PWSs with M/R violations for that contaminant

*Each system is only counted once in the subtotal category (i.e. 2 systems had 2 chlorine residuals TT violations, 43 systems had 56 MOR reporting violations).

Appendix B: Iowa Public Water Supply Violation Data

All public water supply systems that incurred one or more violations during 2023 are listed in the following appendix, including the most recent enforcement action. Systems that became "inactive" during the year because they no longer met the definition of a public water supply are denoted in boldface print on the table.

Legend

Item	Description
PWS Name	Business name of the Public Water System
Minimum Population Served	Population that could use the water, as reported to DNR by the PWS. For municipal systems, it is the most recent official census.
County	County location of PWS
PWSID Number	Public Water System Identification number, a unique and dedicated number permanently assigned to each PWS
PWS Type	Classification type of PWS: community public water system (CWS), non-transient non-community system (NTNC), or transient non-community system (TNC)
Violation Number	A unique, dedicated identification number assigned to each violation as it occurs.
Analyte	The analyte that triggered the violation.
Compliance Period End Date	Date at the end of the compliance period in which the violation occurred.
Violation	The EPA-assigned text description of the violation.
Violation Type	The alphabetic code description of the violation.
Enforcement Action	Most recent action taken by the PWS or the DNR in response to the violation. The final action for any violation is "Compliance Achieved," meaning the system is now in compliance.
Enforcement Action Date	Date the follow-up action or enforcement action occurred

Appendix C: WIIN Lead Testing in School and Child Care Program Drinking Water Grant

The Environmental Protection Agency (EPA) Water Infrastructure Improvements for the Nation (WIIN) grant awarded the Iowa Department of Education funds to support public schools and child care centers in voluntary testing of drinking water for lead. This grant program is designed to reduce lead exposure for children, who are most vulnerable, at schools and child care programs. Grant funding will be used to supplement and enhance existing resources.

The WIIN Lead Testing in School and Child Care Program Drinking Water Grants provide an opportunity for schools and child care programs to bring awareness to water quality through voluntary testing, communication, and education. Public schools and child care programs who participate in the grant will receive access to training and technical assistance to implement the grant as well as additional educational resources for completing grant activities.

The priority areas of this grant funding include facilities within low-income areas, facilities with children six years of age or under and facilities built in 1985 or prior to the National Primary Drinking Water Regulations. Grant dollars can be used for the implementation of testing water for lead, retesting of structures if lead levels are above the state and federal action levels and additional education resources. Applications for voluntary participation from public schools and childcare programs are being accepted in 2024 and on a rolling basis while grant funding is available.

To learn more and apply to participate, visit the [WIIN Lead Testing In School and Child Care Program Drinking Water Grant](#) webpage.

Below are the WIIN program testing results from March 1, 2022 to March 31, 2023.

Site/organization	Number of Buildings Tested	Results over the action level/ total tests	Student Population #	Remediation/Notes
Cedar Rapids CSD	4	1/40	2408	Remediation complete
Des Moines CSD	1	0/4	750
