COMPUTING

# MICROCOMPUTER PURCHASING *Support*

---

## **Selection**

Confused by the array of available microcomputer products? Our qualified consultants can help you select hardware and software to fit your individual needs. Stop by the Personal Computing Support Center (PCSC), 229 LC, for hands-on demonstrations. And browse through our extensive collection of microcomputer periodicals and other references.

## **Purchasing**

The Microcomputer Purchase Program offers:

- Macintosh, IBM, and IBM-compatible systems
- Printers, modems, and other peripherals
- Software programs

Since we order in large quantities, we receive substantial vendor discounts, which we pass on to you.

We also keep you informed about updates to supported software programs and tell you how you can get your packages upgraded.

For a complete listing of products and prices—along with details about eligibility, purchasing procedures, and financing—pick up a free Microcomputer Purchase Program folder in the PCSC.

## **Hardware maintenance**

Most hardware and software items available through the Microcomputer Purchase Program come with a limited warranty. (Some items have multiple warranties running concurrently.) When hardware warranties expire, you can arrange through Weeg for maintenance service on a contract or per-hour basis. For information on product warranties provided by Weeg or outside vendors, contact the PCSC.

TRAINING &  
CONSULTING

# Support

---

## **Short courses**

To help you get the most out of your computer, regardless of where you purchased it, Weeg offers short courses on various hardware and software applications. Most courses last about two hours and are available on a no-charge, no-credit basis.

To place your name on the short course schedule mailing list, call 335-5454, stop by the PCSC or the Information Center, 15 LC, or use the Mailing List Request form on the last page of the *Weeg Newsletter* or short course schedule.

## **The PC Hotline & specialized consulting**

Trained consultants are on hand to help you with hardware and software problems.

For immediate assistance with most day-to-day questions, call the PC Hotline (335-5521) or visit the PC Hotline desk, 229 LC. Specialized problems will be referred to other consultants at Weeg.

## **Publications**

Weeg publishes numerous instructional materials to help you get the most out of your hardware and software products. Many free handouts and moderately priced manuals are available through the PCSC and the Information Center.

The *Weeg Newsletter* includes many interesting articles on microcomputer products and their use. It is available free to anyone, on or off campus, who requests it using a Mailing List Request form.

### **Computer-assisted instruction**

Our Instructional Services Group, 100 LC, helps faculty and staff design, develop, implement, and evaluate computer-based learning materials. The group consults, programs, advises on instructional hardware and software selection, helps implement software from other universities, assists in writing proposals, and conducts research.

### **Instructional clusters**

The Instructional Services Group is also responsible for the instructional computing clusters on campus. They help design clusters, supervise equipment installation, and train cluster monitors.

### **Support from other users**

#### **Public domain software**

Weeg has a large collection of public domain software, including many games and utilities written by other users, as well as some full-scale application software. To obtain a copy of any of this software, bring a formatted disk to the PCSC or to the Information Center.

#### **User groups**

Many local user groups are registered with Weeg. For a free listing of these groups and the kinds of information they provide, stop by the PCSC.

We offer  
University of Iowa  
faculty, staff, & students  
support in:
