THIRTEENTH BIENNIAL REPORT OF THE IOWA STATE BOARD OF EDUCATION

To the Governor of Iowa and the Forty-sixth General Assembly.

Gentlemen: In transmitting to you, as required by law, a detailed report of the several institutions under the control of the Iowa State Board of Education, we would respectfully submit the following general observations:

From the very beginning of our national life, education has been the chief concern of the American people. The school has become the extension of the family and the home. Universal democratic education supported by public funds is an accepted principle. This principle was recognized by the people of Iowa when this state was established. An adequate public school system is regarded as essential to a stable democratic community. The people of the state have been ever ready to tax themselves for the support of the public schools. Parents have never hesitated to make sacrifices that their children may have the best educational advantages.

So-called higher education—education of collegiate and university grade—has been accepted as an essential part of the entire program of training for the coming generations. There is sometimes a disposition to think of the three institutions of higher education in the state as something superimposed upon the school system and not an integral part of it. It is necessary, however, to think of the entire school system and to bear in mind that the children who start in the primary grades move on in an ever increasing stream into each succeeding higher level and on into the college and the university.

While the depression has made the educational problem more acute, it has by no means given rise to it. The question of proper and adequate education for the youth of the community has always been with us. Here in Iowa we have approximately 650,000 children and young people of school age, one-fourth of our population. With economic changes which began prior to the depression, with the ban on child labor, and with restriction of employment opportunities, it is obvious that the number of children and young people to be cared for in the public schools will steadily increase and that the work of the schools will grow heavier rather than lighter. At the beginning of this century there were approximately 500,000

young people in the secondary schools of the country; in 1930, there were five millions. In 1900 there were about 50,000 students in institutions of higher learning in the United States. Today, the number approximates 1,200,000. Last June there were graduated from the Iowa high schools approximately 26,000 young people. Formerly, many of these found employment; but always a considerable percentage went on to college. Due to the economic changes above mentioned, this percentage is steadily increasing. The state schools of higher learning must be prepared to take care of these increasing numbers. There is no other place for them to go except into the streets and the freight cars. It is necessary, therefore, in considering the askings which the State Board of Education is making for appropriations for the next biennium, to think of education, including higher education, as a part of the great social problem of properly caring for the youth of the state.

It is the duty of the Board to inform the Chief Executive and the members of the Assembly of the needs of the institutions under the care of the Board and to ask for such appropriations as will enable them to carry adequately their part of the whole program of education and to fulfill the hopes and expectations of the parents of the young people of the state.

During the years of depression, now happily, we think, drawing to a close, the Board of Education has tried to face the situation in the proper spirit. It voluntarily reduced its request for appropriations from the state and submitted without complaint to further reductions at the hands of the General Assembly and, together with the administrators of the several institutions under its control, has tried to make these curtailed appropriations go as far as possible in maintaining the standards which have been set up in Iowa, and which we do not believe the people desire to see reduced.

At one of the institutions, the State Teachers College, in spite of the most drastic reductions all along the line, the expenditures of this institution for the fiscal year will exceed the income by \$60,000. To meet this deficit, the Board is obliged to ask for a special emergency appropriation. If this is not granted the Iowa State Teachers College cannot meet salary payments and other financial obligations for the last month of the current fiscal year.

The economies put into effect at each of the institutions under the Board have included: reduced salaries and drastic curtailment in upkeep, something which is only justified by the emergency which existed, but which will have to be paid for later on.

The minimum of equipment has been purchased during these lean years, so that now we are face to face with a situation which justifies the requests for considerable additions to the appropriations which have been granted by the last two general assemblies.

Internally, the changing economic and business conditions are producing higher price levels for supplies, equipment and labor, thereby increasing the operating costs at all institutions. Externally, the great scope and variety of the activities of the federal government with respect to public works and employment and relief may have a pronounced effect upon our educational program during the next biennium.

During the last two years, the University and the State College of Agriculture and Mechanic Arts, the latter to a greater degree than the former, have been drawn upon by the federal government for services outside the state. Extension specialists, engineers, county agents, have in many instances been obliged to give practically their entire time and strength to assist the federal government in developing its agricultural program and its public works program. Research staffs in many fields have been drawn, directly or indirectly, into emergency services. There is every reason to believe that this will continue.

In determining the budget requests for 1935-37, it is necessary to keep constantly in mind the extraordinary retrenchments in this and the preceding biennium. The accumulated reduction in the legislative appropriations for 1931-33 for the five schools under the care of the Board is approximately \$5,000,000. This steadily accumulating reduction has presented a serious and constant problem of maintaining the existing educational program and keeping unimpaired the standard of the institutions.

At the end of this biennium the institutions will have operated for four years on restricted personnel, and for three years on a heavily reduced salary scale. Many positions have been left unfilled or filled at reduced salaries. Educational activities and services have been restricted everywhere and no new activities have been taken on. Present conditions and the outlook for the future are such that we feel justified in coming to the legislature with a request that these institutions be put back upon the basis of four years ago. If prices continue to rise, and that is the hope and objective of all efforts now being put forth, it may easily be that before the fiscal year 1937 shall have ended the institutions, if given the funds they now ask, will find it difficult to make ends meet.

This argument is brief, but it should be convincing. Practically everything that goes into physical upkeep and equipment has already advanced in price 25 per cent, and the end is not in sight. Moreover, it goes without saying that with prices rising all along the line the cost for professional services and for labor must be increased proportionately. That is the announced policy of the federal government. It is founded in justice, and we are confident that the people of Iowa will want to go along with it.

REQUESTS FOR APPROPRIATIONS

The following report is a summary of the financial askings which the Iowa State Board of Education submitted to the 44th General Assembly and the 45th General Assembly, for the state educational institutions for each year of the biennial periods that began July 1, 1931, and July 1, 1933, respectively; and the amounts that will be recommended to the Governor, the State Comptroller and the 46th General Assembly for each year of the biennial period that will begin on July 1, 1935:

BRIEF ARGUMENTS IN SUPPORT OF RECOMMENDATIONS FOR APPROPRIATIONS FOR THE STATE UNIVERSITY OF IOWA

The arguments are divided into the following:

- I. Operating Items, for the purpose of
 - A. Maintaining the University as it is.
 - B. Meeting needs for special services.
 - C. Providing for special research projects.
- II. Improvements to public grounds, to existing buildings and to steam, water and electric systems.
- III. Additional buildings.

I. OPERATING ITEMS

A. To Maintain the University as It Is

1. For deferred plant maintenance and additional operating needs\$ 200,000

During the past decade available funds for the operating and repair of the University plant have declined while at the same time, as a result of increased educational demands, the plant has grown in acres and in the number of buildings, as appears in the following comparison:

Plant Value at Cost

1923-24	\$ 8,440,000
1934-35	19,000,000

Engineers advise that repair cost will average 2 per cent annually on building cost, with a tendency to increase with age. At the University this amount would be 2 per cent of \$11,000,000 or.....\$ 220,000

Actual average annual repair cost for the past 5 years 150,000

Arrears annually\$ 70,000

Total shortage 5 years.....\$ 350,000

The age of the building bears directly on this point. They may be summarized as follows:

Number of Buildings	Years Old	Cost
16	24 to 37	\$ 2,196,302
30	6 to 22	2,969,587
9	2 to 5	2,908,945
		Total \$11,074,834

The sum of \$200,000 annually is requested to catch up in part on this deferred needed plant repair and to provide for additional operating needs for the School of Fine Arts on the west campus.

2. Equipment for all departments.....\$ 90,000

The 43rd General Assembly for 1929-1931 appropriated annually \$50,000 for equipment. For the past four years there has been no specific item for equipment, and absolute needs have had to be cared for out of the general education appropriation. This fund is used for the purchase of new equipment in educational laboratories and

shops and for the replacement of equipment items, including furniture, laboratory equipment, office equipment, etc.

The following table shows the reductions made in equipment purchases. The accumulated reductions total \$360,563.

	Total Expended	Accumulated Reduction
1929-30	\$186,959	
1930-31	172,213	\$ 14,746
1931-32	76,818	110,141
1932-33	73,173	113,786
1933-34	65,069	121,890

Total accumulated reductions....\$ 360,563

Considering the fact that the total investment at cost in equipment at the University is, roughly, \$4,500,000, a fund of \$90,000 to meet replacements and to meet new demands is a minimum figure.

3. Replenishing depleted laboratory and educational supplies.\$ 90,000

This item includes general expense for educational departments such as laboratory supplies, apparatus, repairs, printing and other general expense, and excludes salaries and equipment.

This type of expense has been reduced to a minimum for all departments during the past four years and accumulated reductions total \$283,922.

	Total Expended	Accumulated Reduction
1930-31	\$527,641	
1931-32	430,503	\$ 97,138
1932-33	510,486	17,155
1933-34	358,012	169,629

Total accumulated reductions....\$ 283,922

Teaching laboratories such as Chemistry, Physics and Zoology were well stocked two years ago, but these supplies are exhausted and must be replenished. Increased enrollment has made this need serious.

A typical reduction illustrates this point.

1932-33 supplies for Chemistry cost.....\$ 37,000

1934-35 allowed for Chemistry supplies.... 11,600

Yet, Chemistry reports the largest enrollment this fall they have ever had.

4. To cover direct and indirect increase in educational costs due to rising price levels for all kinds of supplies, services and employments, and to provide for increasing teaching load due to increasing attendance.....\$ 400,000

Everything that the University buys and everything that every employee of the University buys has increased in price during the past year from 4 per cent to 67 per cent, or an average increase of about 25 per cent. This means that the cost of supplying the same amount of instruction and educational services is at least one-fourth more than heretofore.

Moreover, throughout the country, wages have increased and hours of labor have been shortened, with the result that total labor costs are advancing. All indications are that this advance will continue during the next biennium.

If, therefore, the University is to maintain its present status and is to continue to render the educational service it is now rendering, it must have more money. To keep its appropriation at the present level means substantial curtailment. Furthermore, the steadily increasing enrollment means more teaching load and this means increasing educational costs. There are 1,012 more students to be taken care of than at the beginning of 1932-33, and 766 more than at the beginning of 1933-34.

5. Child Welfare Research Station.....\$ 40,000

The Child Welfare Research Station was established by a special act of the legislature in 1917. Part of the expense of carrying on the research of the Station has been paid from time to time by special appropriations by the legislature. Other portions of the expense have been met by private donations. In 1928-29 the Laura Spelman Rockefeller trustees made a grant to extend over a period of years, the amount per year diminishing each year.

The University, out of its general appropriation, has made up the balance necessary to continue the research. The amount needed during the next biennium, to offset the reduction in support from the Laura Spelman Rockefeller fund is \$40,000 annually.

B. Additional Needs for Special Services

1. For increased medical personnel to take care of increase in indigent patients in hospital.....\$ 15,000

In 1929-30, the number of indigent patients admitted was 7,069, or a ratio for that year of one physician to 150 patients. In 1933-34, the admissions have been approximately 14,000 indigents, or a ratio of one physician to every 250 patients. This last ratio is much too large for efficient service.

2. Development of types of medical service not now adequately provided for\$ 45,000

The important subject of Dermatology is now inadequately provided for. Syphilology is likewise receiving insufficient attention. These two related subjects should be combined under a new Department of Dermatology and Syphilology. Likewise, the service in Neurology is inadequate. The plan, initiated several years ago, for developing Neuro-Surgery should be completed. The Department of Bacteriology is largely engaged in supplying service for the State Department of Health. Its teaching responsibilities to the medical school are not adequately met. There are also lines of medical research which need development.

3. For additional services and research in the College of Dentistry\$ 7,000

As an inevitable result of the increase in medical services in the hospital has come an increase in dental services. Also, a substantial increase in enrollment requires a restoration in the number of dental demonstrators.

4. To provide training in the administration of public relief, charities, and various forms of social service.....\$ 18,000

This request has been recommended to the Board for the past four years. The depression, with its great increase in relative tax burden, has served to emphasize the tremendous increase in the cost of delinquency, dependency, and

deficiency in Iowa. This includes poor relief, all eleemosynary and penal institutions, orphan, juvenile delinquency, court costs and legal expense paid by the taxpayer. In 1933 the Federal Government spent in Iowa alone \$18,000,000 for relief. In 1928, the state of Iowa expended for welfare activities \$11,000,000, and in 1932, over \$20,000,000.

As a matter of sound economy, the state could well afford to spend some money on training efficient social workers and administrators. The expense would be more than offset by savings from efficient administration.

5. To provide training for peace officers.....\$ 17,000

This was recommended to the Board of Education two years ago. There has come to be a growing recognition of the need of special training for these persons. The University has been urged to make provision for this service. There are 2,200 peace officers who are facing the problem of maintaining law and order. We all recognize that these men stand between organized society and organized crime. Experience elsewhere, both in this country and in Europe, points to the certainty that this service can be improved enormously by definite instructions for a period, say three months, in the technic of their duties in such fields as securing the evidence in the support of the crime.

6. To provide for sanitary engineering.....\$ 12,000

As in the field of hydraulic engineering, the College of Engineering is peculiarly and especially fitted for work, and in no way duplicates the activities at Ames; likewise it is peculiarly fitted for the development of sanitary engineering. The principal justification for the development of sanitary engineering is the close contact with the medical school and the Department of Public Health and Sanitation, also the intimate service relation which the medical school maintains with the State Department of Health. Moreover, the University already has two outstanding men in the field of water analysis and water chemistry.

7. To provide instruction in pneumatics, air engineering and conditioning\$ 8,000

Pneumatics, while not a new subject, is one of rapidly increasing importance. The control of air currents, the action of air under pressure, the conditioning of air as to moisture and temperature, the relation of air conditions to health, are subjects now receiving great attention by engineers. The field of pneumatics is closely related to hydraulics, and the same techniques are used. For that reason, it is a logical subject to develop in connection with hydraulic engineering.

Total New Services (Annually).....	\$ 122,000
------------------------------------	------------

C. For Special Research Projects

- | | |
|--------------------------------|-----------|
| Special research projects..... | \$ 46,500 |
|--------------------------------|-----------|

The University is expected to carry on research if it is true to its name. The University has done and is doing a large amount of research, but its research program has been seriously curtailed as a result of the enforced retrenchments of the past four years. Among the important projects which should be taken care of in the next biennium, the following may be specially mentioned:

- a. Actuarial study of old age pensions, unemployment insurance, and reserves for economic security.

Very little is being done in this field, although Iowa and other states have either set up some kind of insurance or may do so. The State University could make a valuable contribution to what seems to be an inevitable development in the field of insurance.

Professor H. L. Rietz is one of the nationally recognized authorities on actuarial science and will be in charge of this work. He is now serving as consultant to the National Committee on Economic Security.

- b. Statistical analysis of orthopedic material.

This study is very important if the people of the state and the country at large are to have the full benefit of the efficient and distinguished work which Dr. Steindler has been carrying on since 1913. Under his supervision about 30,000 orthopedic cases have been treated. Clinical records of these are on file. To evaluate and check up this remarkable collection of case material would constitute a valuable contribution to medical science. During the past twenty years the state has expended for the hospital care of indigent crippled and handicapped an average of \$200,000 per year, or a total of \$4,000,000. During this time there has been accumulated a vast amount of statistical material which has great significance for the future of orthopedic surgery. The statistical study proposed is designed to utilize this material.

- c. For experimental work in television.

The State University of Iowa is one of the three universities in the United States holding a license of a wave length for experimentation in the rapidly developing field of television. Already the University is making bi-weekly television broadcasts over WSUI. The present radio broadcasting facilities carrying the voice are being combined with the broadcasts of television.

Professor E. B. Kurtz and Mr. J. L. Potter are recognized as among the leaders in the field of television. The results of their experiments are being closely followed.

II. IMPROVEMENTS TO PUBLIC GROUNDS, TO EXISTING BUILDINGS AND TO STEAM, WATER AND ELECTRIC SYSTEMS

The capital expenditures since 1931 from legislative appropriations have been practically negligible. There are many plant improvements and extensions which are seriously needed. The following table shows the reductions in Plant Improvement:

Summary of General Assembly Specific Appropriations for Plant Improvements (Annual Basis)	
1921-1923	\$ 436,000
1923-1925	1,086,288
1925-1927	697,500
1927-1929	525,000
1929-1931	300,000
1931-1933	75,000
1933-1935	None

The following list includes the more important projects which should be undertaken:

1. Improvements which should be continued or originated in connection with the Federal and the State Governments'

plan of Emergency Work Relief Administration.....\$ 97,500

During the year 1933-34 the Federal Government made available approximately \$300,000 under PWA, CWA, and FERA on the campus of the University for various relief projects. The University was able to take advantage of the government relief program because funds were available (primarily from gifts and earnings, which are now exhausted) to match and supplement the government appropriations.

It is apparent now that the program of relief will extend over a considerable period of time and from past experience it has been found advantageous to have funds with which to supplement government funds made available for improvements under its various relief projects.

In addition to the various public works projects of the Federal Government, the State Government, through its Planning Board, the Conservation Board, and Relief agencies, are likely to undertake projects in which the University can cooperate. It is important, therefore, to set up an adequate fund in order to be ready to complete certain outdoor projects already under way and to cooperate in carrying others that may be started.

The following are some of the projects:

- a. Completion of east side tunnel. This was started under CWA and is uncompleted. The materials for this have been furnished by the Federal Government under CWA. This item is mostly for labor.
 - b. West campus grading and completion of Levee project. This was started under CWA and is about half completed. The materials for riprapping have been furnished by CWA and are on hand.
 - c. Clearing east side Recreation Field and establishing a new field on west side campus. This was started under CWA and is uncompleted.
 - d. West Campus Sidewalks.
 - e. Paving rear road of Psychopathic Hospital.
2. Field House Improvements.....\$ 17,500
- This includes additional floors in the north and south sides of the building and improvements to the heating and lighting service, which are needed in order to give full use of this building.
3. Enlargement of Physical Plant Storeroom.....\$ 21,500
- This has been previously recommended by the Board of Education. See Board of Education Reports: 1926, page 16; 1928, page 29.
- In addition to this, the State Accountants in their audit report for 1933, page 75, state: "We would suggest that adequate warehouse facilities be provided."
4. Enlargement of Pasteurizing Plant.....\$ 22,500
- This is a central plant for the entire campus, and will service all departments. Annual saving, \$14,280. Plant will pay for itself in three years.
5. Improvements in Water System.....\$ 20,000
- This includes a new sediment chamber and Dorr purifier on the present water plant. Growing demands make it important that water reservoirs and purifying processor be increased; also that an elevated water tank be installed

on the west campus. A break in the present mains would completely deprive the hospital of water. This will be protection in this emergency and increase the pressure to the west side.

6. Improvements and extension of light, power and steam systems\$ 21,000

This includes power cables to new west side buildings and campus. These buildings are built from gifts and earnings supplemented by government aid; sufficient funds are not available to run a complete system of power lines to these units from the power plant. This includes improvements to campus lighting system and also steam line extensions to west campus.

Total\$ 200,000

III. ADDITIONAL BUILDINGS

In the 1931-1933 appropriation for the State University, the legislature authorized expenditures not to exceed \$75,000 a year for capital improvements. In the present biennium there is no specific appropriation for capital improvements. There are, however, a number of additional buildings which should be provided for in the next biennium. The following may be mentioned:

The first unit of a central University Library.

A botany greenhouse to replace the present small and inadequate house, which can no longer be properly repaired.

Wing for the music school to take care of the large increase in enrollment. The number of practice rooms is now wholly inadequate.

Wing to the Chemistry building in order to provide adequate housing for the work in pharmacy and additional facilities in chemistry and botany.

A preschool laboratory building. This work is now inadequately housed in a number of detached tenant properties of the University.

Wing for the Children's Hospital to provide for psychopathic and mental hygiene work among children.

Addition to the Women's Gymnasium.

Building for the School of Journalism and for the office and equipment of the University Publications division.

An auditorium for convocations and University functions.

While all of these buildings are needed and should eventually be included in legislative askings, it is recommended that only one building be asked for at this time: The first unit of the Central Library, \$200,000 annually. The State University is one of the few good universities without an adequate central library building.

Library books are now stored in seventeen different places on the campus. Eighty-five thousand volumes are housed in the old armory, a building subject to every fire hazard. The library book circulation has increased from 284,000 volumes ten years ago to a present total of \$550,000.

SEWAGE DISPOSAL PLANT

A disposal plant for the west side sewage was at one time contemplated. (See Board minutes of April 25, 1925.)

Since a complete system for the entire city was soon to be considered, this scheme was abandoned. It is now contemplated by the city of Iowa City to construct a sewage disposal plant with such sewers as are necessary. This will

be financed, as now planned, by Federal funds secured by revenue bonds and these to be retired by sewer rentals. It is recommended that the University pay its share of the construction cost when completed and thus avoid annual rental and interest charges.

As the sewage disposal project depends upon what action is taken by Iowa City and the University's share of the total cost of the project is still contingent, it is not advisable to include any specific item in the regular askings. It is something which can be better handled by a special appropriation when the project assumes definite form.

UNIVERSITY HOSPITAL

FOR THE CARE OF INDIGENT PATIENTS

To maintain the University indigent service on the present level and to meet increased demands for services the appropriation should be increased.....\$ 350,000

This request of \$350,000 does not represent a net increase. Instead, \$110,000 of this will be needed to maintain the Hospital at the present level of operation. The sharp increase in price levels has affected all supplies and materials used in the University Hospital. After a careful check in our purchasing, it is estimated that it will cost approximately \$110,000 more to buy the same supplies.

For the year ending June, 1934, the University Hospital treated and cared for 13,440 indigent patients, which is twice as many as cared for in 1928-29. This has been accomplished on about the same operating income, and has been brought about largely by reducing expenditures to an absolute minimum in every department of the Hospital and speeding up service in every department. The cost per patient has been reduced from \$132.56 in 1929 to approximately \$66.60 in 1934. The quota system has been operating very successfully, and has met with approval in all parts of the state. Thus, the remaining \$240,000 of the requested amount is recommended to take care of the increase in demand for indigent service throughout the state. The University Hospital has been operating at a capacity of approximately 75%. This increase will enable the Hospital to operate at full capacity and meet the increasing demand for indigent service.

PSYCHOPATHIC HOSPITAL

To meet the increased cost of supplies, an increased appropriation is requested of.....\$ 8,000

The State Board of Education requested the 45th General Assembly for \$108,000 for the Psychopathic Hospital. This was reduced to \$100,000. It is now requested that this cut be restored, primarily for the purpose of meeting the increased cost of supplies which has affected all departments of the University.

BACTERIOLOGY LABORATORY

To meet the increased cost of supplies.....\$ 2,329

The Board of Education requested the 45th General Assembly for the sum of \$14,555 to operate the Bacteriology Laboratory, which is a part of the College of Medicine. This laboratory plays an important part in protecting and safeguarding the health of the citizens of the state. During the past few years of economic distress, the de-

mands upon this laboratory have been unusually heavy, and the increase in the cost of laboratory supplies makes it necessary to request that the appropriation be restored to the original amount of \$14,555.

SOLDIER TUITION

This appropriation can be decreased \$2,000 annually.....\$ 2,000*

Since the close of the World War in 1918, the State of Iowa has generously provided a fund to pay part of the tuition of honorably discharged soldiers and sailors of the World War, who were attending the State University of Iowa or the Iowa State College of Agriculture. Last year the sum provided for both institutions was \$6,000 annually.

In view of the fact that as time elapses the enrollment of war veterans has tended to be reduced, it is estimated that the sum of \$4,000 annually will be sufficient for the coming biennium, which is a reduction of \$2,000 annually on the present appropriation.

BRIEF ARGUMENTS IN SUPPORT OF RECOMMENDATIONS FOR APPROPRIATIONS FOR IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS

The state of Iowa has supported Iowa State College very generously for the past thirty-five years. The College on the other hand, has given her services generously to the state in every possible way and without doubt during these years has contributed largely to the prosperity and happiness of the people of Iowa. While the state has supported the College generously, the needs for better instruction, for research in agriculture and industrial problems and for extension work among the farmers of the state, have uniformly been in excess of the resources and each year the College has been compelled to carry on a more restricted program than was demanded by the needs of Iowa, so it can truthfully be said that while the funds at the disposal of the Iowa State College have been large they have always been inadequate to meet the educational needs of the state in these fields.

Four years ago the economic condition of the state compelled the legislature to reduce appropriations, and two years ago the college appropriations were of necessity very heavily cut. We were aided in meeting the heavy reductions in income by a considerable decrease in enrollment of students and by much lower prices of the supplies and materials needed by the college. Within the past year and a half, there has been a large increase in the enrollment and very large increases in the prices of all supplies, materials and equipment which the work demands. Living costs are rising rapidly, more instructors must be employed, many of the leading staff members are being offered substantial increases to accept appointments elsewhere and the college is now confronted by the necessity of increasing the expenditures or very markedly reducing the level of the work. There is also a high probability that during the next two years there will be further large advances in costs, and unless this legislature is able to increase materially the appropriations it will be impossible for Iowa State College to continue to serve the state as she has been proud to do in the past.

The appropriations for each year of the past four bienniums have been as follows:

1927-29	\$ 2,670,000
1929-31	2,561,000
1931-33	2,438,000
1933-35	1,780,000
1935-37 (requested)	2,983,000

Since 1929-30 when the entire appropriation of \$2,561,000 was appropriated for support and did not include new buildings, the state appropriations have been reduced \$781,000 and the total income has been reduced over \$1,000,000 or 26.4 per cent. This heavy reduction has been met as follows:

1. Salaries have been reduced from 15 to 40 per cent; on the average 23 per cent.
2. Many vacancies due to resignations have been left unfilled.
3. The period of employment of many teachers has been reduced by six weeks or three months.
4. All wages have been cut 15 to 20 per cent; on the average 16 per cent.
5. Repairs and maintenance have been greatly curtailed.
6. Purchases of supplies and equipment have been greatly reduced.

During this period dismissing any employees as an economy measure has been avoided.

An increase of \$1,203,000 is now asked in addition to the appropriation of two years ago of \$1,780,000, as follows:

Increases necessary to maintain the institution at its present level of efficiency:

1. Increased instruction	\$ 200,000
2. For adjustments of work hours and wages of labor....	87,000
3. To meet increased cost of supplies.....	200,000
4. To meet plant maintenance and operating needs.....	120,000
5. For educational equipment	65,000
Total increase to maintain college on present status..\$	672,000
6. Increase needed for urgent new research work.....	114,000
7. Increase recommended to match U. S. D. A. appropriation for the support of County Agents.....	90,000
8. Additional buildings	327,000
Total increase requested	\$ 1,203,000
Total appropriation requested	2,983,000

SALARIES

The total reduction in expenditures for salaries over 1930-31 amounts to \$819,000. This reduction was made through salary

cuts, reduction of time of employment and positions discontinued. It is now imperative that some teachers be employed for longer periods, that some positions be filled, and that some few salary adjustments be made. It is requested that an appropriation of \$200,000 be allowed to make this possible. It is not the intention to make any general salary increase with this fund, but to use it in the main for providing additional staff service and for making a few essential salary adjustments to retain important members of the staff.

WAGES

The reduction in wages since 1930-31 amounts to \$98,000, met largely through reduction in wages and partly by reduction in employment. At the present time, all wages paid by the college are far below the level demanded by the various codes and the average hours of employment on the campus approximate 48 hours per week. To make the increase in wages that is absolutely necessary and to reduce the hours of employment so as to be in harmony with present conditions an appropriation of \$87,000 is requested.

SUPPLIES

Expenditures for supplies in 1933-34 were reduced \$245,000 below expenditures for 1930-31. Increased prices, estimated at 25 per cent on the average, the reduction of inventories, the increase in the enrollment of students all call for very materially increased expenditures during the coming biennium. \$200,000 is estimated as a minimum to meet this need.

REPAIRS, MAINTENANCE AND ALTERATIONS

With a plant of 199 buildings, costing \$7,780,000, it is estimated that a minimum of 2 per cent per year or \$155,000 is needed to maintain it in effective repair and in efficient operation. During the past three years only \$274,000, or \$91,000 per annum has been spent. This is \$192,000 less for the past three years than satisfactory maintenance demands, and not only adequate current maintenance is needed but also funds to make up for at least a part of this lag. An increase of \$70,000 a year for repairs and an appropriation of \$50,000 a year for major alterations and small buildings, or a total increase of \$120,000 a year, is recommended.

EQUIPMENT

In a technical institution such as Iowa State College, where practically every department must have equipment of the most modern type to carry on instruction and research, large sums are necessary

unless the entire work of the college is to be seriously crippled. Prior to 1931-32 the college spent about \$80,000 a year for new equipment and furniture. During the past four years less than half this amount has been spent. It is now imperative that there be an increase of \$65,000 a year for equipment if the college is to at all maintain its present standards. With approximately two and a half million dollars worth of equipment and class room furniture it is evident that much of it must be replaced each year as some wears out and other becomes useless through obsolescence. With 45 different departments wholly dependent on apparatus for their work, \$75,000 a year on the average is the least possible sum on which the college can operate effectively. In view of the heavy curtailment during the past four years, it is felt that an increase of \$65,000 a year, making \$90,000 a year available during each year of the coming biennium, is essential.

INCREASES NEEDED TO FINANCE NEW RESEARCH ENTERPRISES

1. Beef Cattle Breeding Experiment in Cooperation with U. S. D. A. at Clive.....\$ 12,000
U. S. D. A. will spend \$25,000 in capital expenditures if we provide salaries, wages, and supplies.
Purpose: To study efficient breeding, feeding, and management of beef cattle in relation especially to the pasture areas of Iowa.
2. Progeny Test in Poultry Urged by Iowa Poultrymen..... 12,500
Purpose: To identify those strains of poultry which are most economical and productive.
3. Swine Research Institute 10,000
Purpose: To increase the research work on lard; on determining races of swine most profitable in Iowa; on feeding swine and marketing swine.
4. Corn Research Institute 15,000
Purpose: To increase the work in studying methods to increase the commercial use of corn; in studying the breeding of corn resistant to chinch bugs, ear worms, and drouth; in studying corn differences in milling; and in maintaining selected pure and inbred lines of corn.
5. Completion of Soil Survey..... 12,000
The soil surveys of 87 counties have been completed; 12 remain. At the present rate 2 will be completed a year. With the additional funds requested, the survey of the remaining 12 counties can be completed in 2 years.
6. Study of the Prevention of Breeding Diseases Resulting in Sterile Cattle 5,000
Sterility in dairy cattle is increasing rapidly at great loss to the state dairy interests. It is hoped that this study may result in diminishing this loss.
7. Study of the spread of Animal Diseases and Methods of Prevention 10,000

The study of human hygiene has greatly reduced the ravages of small pox, yellow fever, typhoid fever, etc. Analogous studies in animal hygiene are badly needed to reduce losses from anthrax, swine erysipelas, undulant fever in cattle and other similar diseases.

- | | | |
|-----|--|-----------|
| 8. | Study of Mastitis, Undulant Fever, and Swine Enteritis.. | 15,000 |
| | Studies aimed at the control of these costly diseases of live stock are being carried on in a small way. The work should be largely increased with a view to early results. | |
| 9. | Study of Iowa Coals and Their Domestic Use..... | 7,500 |
| | Studies of the analyses and different methods of burning Iowa coals promise to materially increase consumption to the advantage of Iowa industries. | |
| 10 | Study of House Furnace Stokers and Burners..... | 5,000 |
| | Studies of the various coal stokers for house furnaces adapted to the use of Iowa coals promise to materially increase consumption of Iowa coals in residences. | |
| 11. | Study of Engineering and Chemical Aspects of the Use of Alcohol-Gasoline Blend | 10,000 |
| | The ultimate use of alcohol blended with gasoline as a motor fuel seems highly probable. Such use will greatly increase the consumption of corn for the manufacture of alcohol. Research aimed to perfect the economical use of such a blend is of vital importance to this state. Much expensive equipment is essential to the prosecution of the work. | |
| | For the Support of County Agents..... | \$ 90,000 |

At the present time, the college pays from federal funds \$75 a month on the salary of every county agent. If the state is able to match this federal appropriation, the college could then pay \$150 per month on the salary of each county agent, increasing the certainty of tenure and improving the personnel of the county agents. With continued federal direction of agriculture, it seems increasingly important to maintain well-trained and experienced men in each county as the representatives of the federal and state government in directing and encouraging agriculture in harmony with federal and state policies. While it is possible to provide clerical work, supplies, and travel expense from county funds, it does not seem possible to maintain efficient service without direct state support. This appropriation would greatly increase the efficiency of the service.

BUILDINGS

A considerable number of additional buildings will have to be built for the proper conduct of the work at Iowa State College as soon as funds are available. The news from Washington would seem to indicate the probability that large federal appropriations may be available for the erection of public buildings during the biennium. If such funds become available for the use of the state

on any conditions, it would seem wise to take advantage of them for the erection of buildings which otherwise the state would have to provide.

The buildings listed below must be built for Iowa State College as soon as possible. They have been requested of the legislature for several years past and their need each year becomes more pressing. Plans for all these buildings have been prepared and construction could go forward at an early date if funds were available. Their construction is urgently recommended if federal funds make one or more of them possible.

1. An addition to the Library. Annually, \$75,000. Total cost...\$ 150,000

The Library was constructed in 1924 at a cost of \$626,000. Its capacity for books has been reached and for the past five years considerable numbers of books have been stored outside the Library. Additional room for book stacks with shelving is most urgently needed.

2. Additions to and Remodeling of Veterinary Buildings. Annually, \$92,000. Total cost..... 184,000

The present clinic building is wholly inadequate and a new clinic building in which the students can gain experience in the treatment of live stock injuries and diseases is essential to the proper teaching of veterinary medicine. An additional wing for veterinary pathology is urgently needed and funds are needed to remodel the present veterinary clinic wing if the new clinic building is built. All of these are included in the above estimate. With over one-third of the income of the state depending on live stock, the maintenance of the health of the live stock of Iowa is crucially important. The Iowa State College has been maintaining one of the best of the twelve veterinary schools in the United States and the buildings above are essential if it continues to hold its rank in this important work.

3. Women's Gymnasium. Annually, \$160,000. Total cost.... 320,000

The present facilities for physical education and exercise for the thousand young women in parts of three poorly adapted structures, none built for this purpose, are wholly inadequate. The health and physical development of the young women of Iowa attending Iowa State College should be far more adequately provided for by the state. This building has been urgently needed for the past ten years.

The above increases in appropriations for Iowa State College are unquestionably needed urgently to carry on in anything like an adequate manner the teaching, research, and extension work which is needed in technical lines in this state. It is hoped that it may be possible through state and federal money for the legislature to satisfy all of these requests. If it is not possible to grant all of them, the needs for support should take preference over those for buildings.

BRIEF ARGUMENTS IN SUPPORT OF RECOMMENDATIONS FOR APPROPRIATIONS FOR THE IOWA STATE TEACHERS COLLEGE

CURRENT SUPPORT

The table on the following page shows the appropriations that were made by the 43rd, the 44th, and the 45th General Assemblies; the amount expended during the 1932-33 and the 1933-34 fiscal years; and the recommendations that the Iowa State Board of Education is submitting to the Governor, the Comptroller, and the 46th General Assembly for the support and upbuilding of the Iowa State Teachers College for each year of the coming biennial period.

An examination of the table reveals that the 45th General Assembly made an annual unallocated appropriation amounting to \$480,000 for the support of the Iowa State Teachers College during the current biennial period. Inasmuch as the annual appropriation for the preceding biennium was \$633,500, the decrease amounted to 24.2 per cent. Such a radical reduction necessitated major adjustments in the financial program of the institution. In the first place, all operating costs, other than payments of salaries and wages, were reduced to a minimum basis. The purchase of the usual instructional and maintenance equipment and supplies was postponed indefinitely and the ordinary repair program was discontinued. In the second place, all annual salaries of \$2,000 or more were reduced 20 per cent and all salaries and annual wage totals of less than \$2,000 were reduced 15 per cent. This reduction schedule for salaries and wages was as large, if not larger, than was necessitated at either of the other two state institutions of

higher learning, and consequently, was all that could be justified in view of the fact that salaries and wages at the Iowa State Teachers College were already below the general average paid at either of the other two state institutions. However, these measures did not effect a sufficient saving to bring the proposed expenditures within the scope of the anticipated income. Accordingly it was found necessary to reorganize the entire instructional program so that the college could operate with a smaller faculty. This made it possible to release twenty-seven members of the instructional staff, seven clerks and stenographers, and five maintenance workers. But after all these efforts to adjust the program of the college to the greatly reduced support, the appropriation was found to be inadequate to the extent of \$60,000 per year. It has, therefore, been effectively demonstrated that the least amount that the state should appropriate for each year of the coming biennium is \$540,000 providing all the conditions under which the college has labored during the past year should persist throughout the duration of the coming biennium.

It is perfectly evident, however, that these conditions will, and cannot, persist. Nobody expects, or hopes, that such will be the case. All the efforts of the federal government, of industry, and of the body politic in general are being expended in the direction of bringing about increased costs in connection with all activities. The prices of practically all commodities are increasing; labor is being paid higher wages and is working fewer hours per week; and all agencies, governmental and private, are being spurred on to greater activities and consequently larger expenditures.

The proposed expenditures listed in the operating budget of the Iowa State Teachers College for the current fiscal year can be assembled under two main headings: (1) Personal Service and (2) Other Operating Expenses. The first category includes all salaries and wages while in the second are listed all other expenditures such as administrative, instructional, maintenance and janitorial equipment and supplies, library books and periodicals, fuel, water, gas, laundry and telephone service. The personal service for which the college has contracted for the current year amounts to \$566,034 while the estimated cost of the other operating expenses is \$172,746.

If one is to pay any attention to the trend of the times, and one must in administering a college, it is impossible to arrive at any other conclusion than that the personal service which the college

requires is going to cost more during the coming two years than it is costing at present. In the first place, let us consider the matter of enrollment. There are approximately one hundred more students enrolled in the college this year than a year ago. It is an accepted principle of college administration that an additional instructor is needed for every unit increase in enrollment of twenty to twenty-five students. Since no funds were available with which to employ additional instructors for the current year, the increased enrollment had to be accommodated in other ways that were not conducive to the best interests of the student body. However a similar increase in enrollment next fall cannot be handled without a pronounced enlargement of the instructional staff. In the second place, it is necessary to give some consideration to movements in the labor world. At the present time, all of the members of the maintenance and janitorial staff are working fifty hours per week at wage rates that range from thirty-five to sixty cents per hour. How long the college can maintain this status of affairs is questionable. With higher wages and fewer hours per week the trend in industry, it seems reasonable to suppose that the college will have to take some steps in the same direction in the near future. Just how much the necessary adjustment would cost, no one can foretell at this time. Perhaps, however, it is not out of place to point out that it would cost an additional \$30,000 per year to decrease the working schedule of laborers from fifty to forty hours per week and to increase the average wage rate 20 per cent. In the third place, with the cost of practically all other types of service on the upward trend, it is certain that the cost of administrative, instructional, and clerical service within a college will be similarly affected. And while there is no thought at the present time that the college will need to increase salaries in general during the next two years, there is every reason to believe that funds will be needed for salary adjustments in certain specific cases. In other words, it should not be necessary for the college to lose its best people to other institutions when a few thousand dollars will make it possible to keep the present faculty intact. In order to meet the demands incident to increased enrollment and a rising labor market, and in order to insure the continuance of the present faculty personnel and the preservation of its morale, the Board of Education deems it necessary to request the 46th General Assembly for an increase in appropriations for the Iowa State Teachers

College amounting to 10 per cent of the cost of all personal service for the current fiscal year, or \$56,600.

In addition to the increased cost of personal service, one is obliged to take into consideration the increased cost of all operating supplies, materials and equipment. Everyone knows that the past year has witnessed a general rise in commodity prices. An examination of a large number of invoices of materials purchased by the college year by year has disclosed that this rise has been about 25 per cent during the past twelve months. Accordingly, the Board is requesting a further increase of \$43,200 per year to offset the increased cost of all operating materials at the Iowa State Teachers College.

During the past two years, because of extremely limited funds, it has been impossible for the college to replace equipment that has worn out or to maintain the normal amount of instructional, maintenance, and janitorial supplies. In order to replace this worn-out equipment, restore depleted supplies of all kinds, and take care of unforeseen contingencies that may arise during the coming bien-nium, the Board is requesting an annual appropriation of \$20,000. The largest single item in the projected program of equipment replacement is the installation of new desks and tables in six science laboratories at an estimated cost of \$15,340. Again, the ordinary maintenance program, such as painting and decorating, replacement of plumbing and heating equipment, the modernization of lighting fixtures, and the making of minor repairs has had to be very largely suspended during the past two years. In order to catch up with this work, the Board is requesting an annual appropriation of \$20,000. A partial list of repair jobs demanding immediate attention, together with the estimated cost of each project, is given below.

CAPITAL OUTLAY

The 45th General Assembly made no appropriation for the general improvement and further development of the Iowa State Teachers College. For the coming biennial period, the Board of Education is requesting an annual appropriation of \$92,000 in order to carry out the following projects:

General Improvements	\$ 30,000
----------------------------	-----------

Under this heading can be listed the grading and landscaping of the west central portion of the campus, the construction and fencing of ten all-weather tennis courts for the use of the women of the student body, the construction of a retaining wall along the east side of the south half of the west campus drive, the paving of the south half of the west campus drive and the drive east of the Heating and Power Plant, the installation of a sterilization plant in the swimming pool of the Men's Gymnasium, and the construction of much needed sidewalks at various places about the campus.

Remodeling of the Women's Physical Education Building.....	50,000
--	--------

The building being used at present by the Department of Physical Education for Women was erected in 1903 and was used for more than twenty years for instruction in Physical Education for both men and women. Since it is now being used by one department only, and since the work in physical education for women has been expanded greatly during recent years, it has become highly advisable to remodel the building in order to facilitate the instructional work and in order to use all of the available space to the best possible advantage. The space used at present for administrative offices and theoretical instruction needs to be remodeled and rearranged in order to promote economy of time and effort and to secure better lighting and ventilation; the basement, which is now devoted partially to dressing quarters and bathing facilities, needs a complete overhauling in order to promote better sanitation and to eliminate much waste space; the flooring of all three stories needs to be renewed inasmuch as it has become badly worn and splintered as a result of thirty years of hard usage; the lighting fixtures need to be changed for more modern ones; and the entire building needs redecoration. In addition to the above, the swimming pool had to be abandoned early in 1933 because of defective sanitation. The Board now proposes

to build a new and larger pool along the west side of the building so that the entire present basement can be used for locker rooms and toilet facilities. Because the training of teachers of physical education is such an important part of the program of the Teachers College, and because this work is progressing under a very great handicap at the present time, this project is worthy of the most serious consideration of the General Assembly.

New Greenhouse for Instruction in Botany and Nature Study..\$ 12,000

The present greenhouse has been used for many years and is about to tumble down. Much of the frame is made of wood which is rotted in several places to such an extent that it will not hold the glass. Then, again, it is far from adequate in so far as growing space is concerned. Consequently the instructional work in Botany, Nature Study, and related subjects will be greatly handicapped until new and more commodious laboratory space is provided. It is estimated that a lay-out which will meet the needs of the college will cost \$24,000 which amount includes an allowance of \$8,000 for the heating tunnel. This, too, is a project worthy of every possible consideration.

BRIEF ARGUMENTS IN SUPPORT OF RECOMMENDATIONS FOR APPROPRIATIONS FOR THE IOWA SCHOOL FOR THE DEAF

The askings of the Iowa State Board of Education for the use and benefit of the Iowa School for the Deaf for each year of the biennium that will begin July 1, 1935, are as follows:

Salaries, Support and Maintenance.....\$222,250.00
Capital Outlay 102,500.00

Grand total for each year of the Biennium.....\$324,750.00
Salaries, Support and Maintenance..... 222,250.00

The 45th General Assembly appropriated \$195,000.00 for each year of the biennial period that began July 1, 1933. This amount is \$20,000.00 per year less than the amount requested by the Board for the use of the School for the Deaf. Maintenance is an important item under this heading. Several years ago it was customary for the General Assembly to grant the School for the Deaf a separate fund of \$20,000.00 for maintenance alone. Subsequently the administration desiring to reduce the number of separate funds combined the maintenance with our salary and support fund. This

fact should be kept in mind. It should also be remembered that the \$20,000.00 per year cut suffered by the school this biennium is adversely effecting the upkeep or maintenance of the school plant. In the long run slipshod methods in plant maintenance made necessary by the lack of funds is very uneconomical and should be guarded against during the next two years.

The school has been very fortunate this biennium in being able to buy a great many supplies at or near bottom prices. This stock, however, is already exhausted and future purchases will be at much higher prices as well as in larger quantities since the school is experiencing a steady growth. It is obvious, therefore, that the two items, support and maintenance coming under this heading will call for a considerable increase over the period to carry us through the next two years.

Equipment

The State School for the Deaf is a million-dollar plant. A great quantity of equipment is used in its operation. Replacements, of course, are necessary from time to time but have been made only when absolutely necessary during the present biennium which has been one of retrenchment for the school. This policy, however, will increase the number of replacements during the next two years as much of this equipment is not only old and obsolete but is costing too much for operation. There is a refrigerating plant that was installed fifteen years ago. It was considered a splendid small plant at that time. It has given good service until the last year or two. However, it requires a ten horsepower motor to operate it. A modern refrigerating unit could be operated with less than a fifth of the electric current required for the present plant and would at the same time do away with the present unsanitary walk in refrigerating boxes. There is a farm tractor that has been in use seven years but has cost too much to operate, especially during the past year. It would be unwise and probably foolish to attempt to operate it another year. There is a Ford truck that is five years old, but the repair bills are too high, its service is uncertain and unsatisfactory and the cost of operation is many times that of a new truck. The main hot water tank that supplies hot water to the various departments of the institution is at least thirty years old and perhaps older. It is in bad condition and, because of pinhole leaks as well as other defects, it has had to be repaired repeatedly during the past few years. There

is an increasing danger both to life and property in its continued use. The state is not justified in taking a gamble of this nature. Neither is it justified in spending ten dollars to save five which evidently is being done at the School for the Deaf in postponing the replacement of certain equipment because of insufficient working capital or appropriations.

The equipment just mentioned must be replaced by drawing on the salary, support and maintenance fund as we have no special fund for equipment or maintenance. The items enumerated do not complete the list of needs even in the physical plant but merely call attention to some of the most urgent needs of the department and the necessity of providing for their purchase in our salary, support and maintenance fund.

Vocational School

Adequate equipment for the physical plant, of course, is absolutely necessary for the functioning of the institution yet such equipment, the need of which has just been cited, has very little to do, except indirectly, with the educational department of the school. Besides providing the usual elementary and high school education for the deaf boys and girls of the state the school also maintains a strong vocational department where the older pupils are taught various trades. Given only an academic education the deaf would rarely become self-supporting. When, however, academic instruction is combined with appropriate vocational training the deaf are rarely not able to support themselves. The importance of maintaining a strong vocational department in a school for the deaf is, therefore, obvious. It is for this reason that most of the state schools for the deaf feature their vocational training. The outlay for equipment in the vocational department is extensive and also expensive. The demand for replacements is high. There are two important reasons for this. In the first place it would be unwise to train our pupils in the use of obsolete machines and then send them out in the industrial world to operate modern machines for which they have had no training. In the second place this equipment is of necessity often in young and inexperienced hands and in spite of careful supervision breakage is high which calls for many repairs, the purchase of many parts and occasionally the replacement of the entire unit. The vocational department of the school maintains facilities for teaching the following trades: barbering, beauty culture, bookbinding, printing including the

operation of linotypes and job presses, home economics, including sewing and cooking, weaving and basketry, carpentry, cabinet-making, shoe repairing and harness making, painting, and baking. Replacements of equipment in the vocational department during the next two years will amount to not less than \$8,000.00. However, this is less than \$700.00 for each of the twelve trades taught. In addition to replacements some modern equipment should be installed at this time which will bring the requirement of the vocational department to approximately \$12,000.00 for the biennium. This figure does not include material and supplies used in carrying on the work of the various trades. For instance, it does include sugar and flour for the bakery, paper and ink for the printing, cardboard and glue for the bindery, leather for shoe repairing, lumber and nails for the carpenter and cabinet shops. However, the latter as well as the former must be provided for in our salary, support and maintenance fund.

High School Science

This department will need its usual supplies for each year of the biennium along with some additional equipment in order to maintain the standard expected of accredited high schools.

Household Department

The State School for the Deaf is of the boarding school type and must, therefore, provide both room and board for its pupils. Replacements in the dormitories of furniture, bedsteads, mattresses, sheets and blankets from time to time are necessary and will be larger than usual during the next two years. The increasing enrollment will also call for additional equipment for the dormitories and some modification of the boys' dormitory rooms and the installation of lockers in order to provide sufficient sleeping quarters for everybody. The remodeling and the lockers together will cost about \$2,000.00. The replacement of furnishings with the necessary additions will amount to about \$4,000.00, making a total for living quarters of \$6,000.00. Supplies and provisions for the dining rooms and kitchen will cost more during the next two years than they have during the present biennial period because of the prevailing higher prices and the increase in the quantity needed as a result of the school growth. Our salary, support and maintenance fund must take care of these requirements.

Laundry

The school laundry turns out a great quantity of work. It is well equipped. Unfortunately, however, the equipment is out of balance with reference to the capacity of the major units. When the washing machines are running at full capacity they supply only half enough clothes to keep the extractor and flat-ironer going at half capacity. Another washing machine would establish a balance between the major units and bring about a marked increase in the efficiency of the whole. A new washing machine will cost about \$4,500.00.

Farm and Garden

The school maintains a farm of 160 acres of tillable ground, a dairy herd of 30 milch cows and 15 to 20 head of young stock; 40 head of beef cattle, 100 head of hogs and 2,000 chickens are fattened each year and consumed at the school. The annual outlay for equipment in this department will be about \$900.00.

Grounds

The school grounds are extensive and require considerable labor during the growing season and the usual equipment to do the work.

Some of the larger and more urgent needs of the School for the Deaf have been pointed out in the foregoing part of this report. There are other items, of course, that might be mentioned. Your attention, however, should be called to the unforeseen situations that invariably arise and the necessity of making provision for them in the appropriation. Experience shows that emergency situations coming up each year and that cannot be foreseen, run from a few thousand to several thousand dollars.

In order to provide for deferred replacements and repairs and for purchase of supplies at increasing prices, it will be necessary to grant the School for the Deaf a considerably larger appropriation for its salary, support and maintenance fund for the coming two years than was provided for it during the present two years. To have a full nine months session for each of the next two years the School for the Deaf will require the full amount in its salary, support and maintenance fund requested by the State Board of Education of the 46th General Assembly.

Capital Outlay (Annually)	\$102,500.00
New Vocational Building (Annually)	62,500.00

As already stated elsewhere in this report, state schools for the deaf feature their vocational departments. The chief reason for

this practice lies in the fact that the vocational department furnishes a means for the deaf boy to learn a trade and through it become a self-sustaining citizen after leaving school. Most of the states have met this situation by providing their schools for the deaf with a vocational building where vocational training, so important in the education of the deaf, can be carried on at its best. Minnesota, South Dakota, Nebraska, Kansas, Missouri and Oklahoma have all provided vocational buildings for their schools for the deaf within recent years. Twelve years ago the Oklahoma school put up a new vocational building, but converted it into a boys' dormitory two years ago and then erected a larger vocational building to meet the increasing demand for better vocational training.

The vocational department of the Iowa school is located in the basement of the dormitory building where the lighting, heating and ventilation are poor and the supervision of the work is difficult. The basement windows are near the ceilings and daylight coming in is insufficient for the work in hand, making it necessary to depend almost entirely on artificial lights. The heating mains that feed steam to the radiators on the four floors above the basement pass through the rooms occupied by the vocational classes. In mild weather the basement rooms are too hot and in zero weather they are too cold. They are very seldom at the correct temperature and there seems to be no remedy for this condition. The basement floors are about seven feet below the base of the windows where foul air is trapped and in which the pupils and instructors must work. Some of the older pupils spend from two to four hours daily in these basement rooms and vocational instructors of course are there all day. Several of these instructors during the past few years have had serious cases of sinus infections which they attribute to the conditions of the basement rooms in which they must carry on their work. The rooms are widely scattered making supervision of the work difficult. There are no more rooms in this basement that can be occupied by the vocational department making further expansion impossible until a vocational building is secured.

The enrollment of the school has more than doubled within the past fifteen years. The rooms now occupied by the vocational department can now be used to advantage for other purposes. The dormitory building lacks bathing facilities. Some of the basement rooms now occupied by the vocational department might well be

converted into shower rooms with wholesome effect. The end rooms which are better ventilated than the others might be used in bad weather as play rooms. Some of the others can be used for storage purposes. This arrangement would relieve some of the over-crowding in the dormitories for the time being. A vocational building at this time, therefore, would make it possible for the school to offer to its pupils more and better vocational training and at the same time remove some very undesirable conditions under which both pupils and instructors must work so long as the vocational department occupies its present basement quarters.

The outstanding need of the Iowa School for the Deaf at the present time is a new vocational building.

New Hospital Building (Annually).....\$25,000.00

The school's hospital quarters are now located in an old building that was erected in 1875. The outside walls are of brick, the partition walls are constructed of lumber and beaver board and there are many partition walls enclosing several isolation rooms and a number of closets. Both the first and second floors are of wood. The whole interior construction is, therefore, of a highly combustible nature and is admittedly a poor place in which to house sick children, especially deaf ones. During epidemics, and we usually have from one to three every year, there may be as high as 34 deaf children at one time lying-in in this building. Every precaution is taken to guard against a fire. Nevertheless, this building is a continuous fire hazard and a great worry to the management. The building was condemned for hospital purposes several years ago by the State Fire Marshal. The General Assembly, however, has never made provision for a new hospital. It is hoped that the 46th General Assembly will appropriate a sufficient amount of money to provide the school with a new hospital of a modern type, thereby making it possible to better care for the health of the deaf children entrusted to its care and at the same time remove the dangers of a disastrous fire that will continuously exist so long as the present sixty-year-old building is used for the hospitalization of our pupils.

New Dairy Barn (Annually).....\$15,000.00

The present dairy barn at the School for the Deaf is about fifty years old. It has been extensively repaired and remodeled during the past twenty years. At the present time it will accommodate 29 milch cows. There should be accommodations for not less than

40. To attempt to enlarge and remodel the present barn would be uneconomical especially if sanitation be given the proper consideration. Then, too, it is desirable to relocate the barn at a greater distance from the living quarters of the school. The new barn should provide for 40 stanchions, several box stalls, a milk room, an office, a wash room, storage rooms for feed, a feed mixing room, a commodious haymow and be equipped with a combine milker and bottling machine, making it possible to serve the milk in half pint bottles, without the milk having come in contact with the air of the barn or elsewhere. The new barn and equipment would provide the State School for the Deaf with the latest and most approved method of handling and serving milk, and there is no better food for growing children than good, wholesome milk.

AID FOR BLIND STUDENTS

The 41st General Assembly made an appropriation "for the purpose of aiding students who are blind and who are regularly enrolled students taking any course of study, profession, art or science in any university, college, conservatory of music, normal, professional or vocational school, approved by the State Board of Education, and who are residents of the state of Iowa, and to assist them in defraying their necessary expenses including the expenses of a reader or assistant," with the understanding that the money "shall be granted only to worthy students who are not able, or whose parents are not able to provide the means for continuing their study in any of the institutions above mentioned."

Each succeeding General Assembly has made an appropriation for the same purpose.

During the present biennium the following number of young people have taken advantage of the law:

Year	Number of Students
1933-1934	16
1934-1935	22

The total cost of tuition, room, board, books and supplies, and readers, during the year that ended June 30, 1934, was \$5,327.13, which was paid out of funds appropriated by the 45th General Assembly and allocated for that purpose by the State Comptroller.

The status of the appropriation for the year 1934-1935 is as follows:

Estimated allocation	\$ 6,000.00
Expenses incurred by 22 students from July 1, 1934, to January 1, 1935, approximately	3,500.00
Balance available January 1, 1935	\$ 2,500.00

DAY SCHOOLS FOR DEAF CHILDREN

The 37th General Assembly that convened in January, 1917, enacted a law authorizing school corporations to provide education for deaf children. Section 3 of that act is as follows:

"State board of education to supervise. That when any school corporation shall elect to proceed under the provisions of this act it shall, through its proper officers, communicate that fact to the state board of education, and the state board of education shall have general supervision of all matters arising under this act, and no instructor shall be appointed hereunder and no courses or methods of instruction shall be installed hereunder without the approval of such state board of education."

That section has been in effect continuously since July 1, 1917.

The measure provided that any school corporation that would comply with the provisions of the act should be given state aid for each deaf child between certain ages. A part of section 4349 of the Code, 1931, is as follows:

"State aid—amount. To any school corporation providing such instruction and complying with all of the provisions of this chapter there shall be granted and paid as hereinafter provided state aid in an amount to be computed at twenty dollars for each month that each child not more than sixteen years of age is instructed under the provisions of this chapter."

The following report contains the names of the cities that maintained day schools for deaf children during the school years 1932-1933 and 1933-1934, respectively, the number of children enrolled in each and the amount of state aid:

Electricity Generated ⁽²⁾	5,974,000 K.W.H.
Total Water Pumped.....	324,652,000 Gallons

Note:

⁽¹⁾ Steam generated includes a gross total of 167,661,000 pounds consumed by generation of which 49,507,000 pounds were returned through the exhaust line back to the heating mains. (Bled Steam) This resulted in a saving of \$10,000.41 for the year. (49,507,000 lbs. at .202 per M, the rate being 40% less for exhaust steam.)

⁽²⁾ This includes 1,395,400 K.W.H. used in power plant production distributed as follows:

To Steam Production.....	44.35%
To Electricity Production.....	10.29%
To Water Production.....	45.36%

FINANCES OF THE STATE UNIVERSITY OF IOWA

Report of the Treasurer Regarding Receipts and Disbursements of All
Funds from July 1, 1932, to June 30, 1933

F. L. HAMBORG

GROUP INVESTMENT

On January 17, 1929, the Board of Education approved a plan of grouping the unexpendable trust funds and endowment funds into one fund in order to simplify their investment. This includes the funds listed on Exhibit K, under the heading of "Group Investment." This plan became effective as of January 1, 1929, as follows:

1. That the above funds be carried with the Treasurer of the University in one bank account.
2. That all loans and investments be made from one bank account.
3. That the income from the said loans and investments, as well as the interest on daily balances, be credited to a separate account entitled, "Interest from Endowment Funds."
4. That at the close of the year, the aforesaid income be divided pro rata and credited to the proper funds. (See Schedule K-7.)

The funds on Exhibit K not in group investment plan are excluded for the reason that they are invested in the original securities as given to the University and by the terms of the gift cannot be included under this plan.

Note: (1) Steam generated includes a gross total of 193,428,000 pounds consumed by generation of which 63,214,000 pounds were returned through the exhaust line back to the heating mains (Bled steam). This resulted in a saving of \$11,757.81 for the year. (63,214,000 pounds at 186 per M, the rate being 40 per cent less for exhaust steam.)

(2) This includes 1,596,000 K.W.H. used in power plant production distribution as follows:

- To Steam Production, 44.35 per cent.
- To Electricity Production, 10.29 per cent.
- To Water Production, 45.36 per cent.

EMERGENCY RELIEF

During the year 1933-1934, three projects were carried out on the campus promoting emergency relief.

First. Civil Works Administration laborers removed two old buildings: the old heating plant and the office building of the Superintendent of Buildings and Grounds.

Second. Student Emergency Relief was carried on from February until June, with 135 students receiving benefits and a total of \$6,983.28 being expended.

Third. Janitresses and clerks under the supervision of the Black Hawk County officials were given employment under C.W.A. and I.E.R.A. in a varying amount from 50 hours per week total to 300 hours per week total during the months of December, January, February, March, June, and July.

STUDIES PURSUED

In many respects the School for the Blind has followed the same line of studies as the schools for the sighted. It has not only the usual eight grades admitting to high school standing, but the high school as well; and any boy or girl graduating from the academic department of the School for the Blind is prepared to enter the State University or any of the colleges of Iowa. The course of study is practically the same as that of schools for the sighted. Mathematics, English, History, Spelling, Writing, Geography, Science, Latin, and Music are all included in the course of study.

During the past biennium more than a dozen graduates of the Iowa School for the Blind have entered the colleges of the state, or having entered previously have graduated. While it is not a part of the report of the Iowa School for the Blind, yet it may not be out of place to add that the appropriation which the state legislature made, for the purpose of aiding blind students desiring to continue their education in higher institutions of learning, has been of tremendous service. Perhaps not so much from the standpoint of vocation, as from the standpoint of life itself. If a college education is good for the sighted, it is also good for the blind. It may be that it sometimes arouses ambitions that cannot be satisfied, but I believe that it is better to have aspired and lost than never to have aspired at all—to paraphrase some words of the poet. It gives the blind a larger horizon of thought and a new viewpoint of life. In many cases the vocational standing has been greatly improved.

In the Iowa School for the Blind each pupil as a rule, unless excused by the nurse or the school physician, is required to take physical training work, and for this purpose an hour a day is given to gymnastics. It is believed that this work has been of great value to the pupils of the Iowa School for the Blind, not only from the standpoint of health but also from the standpoint of muscular movement. A great many blind children are naturally timid, others are inclined to inactivity because of blindness, and the training that they get in the gymnasium has been of incalculable benefit to them in overcoming either timidity or inactivity. It is possible that there should be some new adjustments as far as the gymnasium work is concerned. Perhaps there should be a greater emphasis upon needed corrective work, although this type of work is perhaps the most difficult work as far as final results are concerned. It is much easier to train a pupil and develop right habits of body movement and body attitudes than to correct the wrong habits already formed. And yet the latter is as essential as the former is expedient.

Every pupil is required to take some industrial work, unless there are other handicaps than blindness. This requirement is based upon two conclusions: first, that such industrial work has an educational value outside of its vocational value; second, that every pupil should be trained in the means of self-support. It is perhaps true that all of the pupils will not enter the vocations for which the School for the Blind prepares them. Some of them will, as experience has shown, and all of them should go from the School prepared for some useful occupation along the lines of instruction, useful at least until some more inviting opportunity presents itself, as also experience has shown. To this end the School offers a course in basket-making, rug and carpet-weaving, chair caning, brush and broom making, hammock tying, piano tuning, and dictaphone operating. Some work in the field of floriculture has been done since the greenhouse has been built. However, as yet, the work has not been systematized and an intelligent report along this line cannot be made. We are hoping in the near future to make an intelligent and valuable use of the greenhouse for educational purposes. I am of the opinion that many of our totally blind boys and girls may come into a fine appreciation of flowers through the sense of smell. And then, there are others who have some sight who may be able to reap some practical rewards of the study of floriculture.

There have been sixteen reunions held in Vinton since I have had charge of the work of the School for the Blind. To these reunions have come blind men and women, most of them graduates of the School, from all parts of Iowa, as well as from other states. Most of them would be called successful. There have been some successful business men, successful lawyers, successful osteopaths and chiropractors, successful teachers, successful preachers, successful industrial workers, successful musicians, successful homemakers. The point is, that we cannot nor do we want to educate the child contrary to his natural tendencies, provided these tendencies be wholesome and serviceable; but on the contrary we must endeavor to draw out the best that is in him, until every static force for good becomes dynamic. There are perhaps many, many lines along which blindness is not insuperable and it is felt that the work should have a very broad educational basis.

References have been made to important differences when the Iowa School for the Blind is compared to the schools for the sighted. This is nowhere better illustrated than in the department of music. In this department the work has a two-fold purpose: first, to train the child in a proper interpretation and appreciation of music; second, to test the pupils with reference to a musical career. Some work is required of all, and all musical studies are within the election of all, unless in the judgment of the teachers it would be a waste of time to continue the study of music. In pursuing this purpose mistakes have been made, but on the whole it has had beneficial results. It has led to the discovery of one or two students who may be highly successful in the field of music. The School offers under the guidance of competent teachers instruction in voice, violin, piano, organ, and orchestra. Every student is required to take some voice work, all are encouraged to test themselves in other lines. A thirty-piece orchestra has been developed under competent leadership. This orchestra will compare favorably with similar orchestras in schools for the sighted. During the months of May, 1933 and 1934, to the great joy of all friends of the blind, the school competed in the State Music Contests sponsored by the Music Department of the State University. In the contests of 1933, the orchestra of the Iowa School for the Blind won a superior rating in the sub-district and district contests, and an excellent rating in the final state contest. In 1934 the orchestra won a superior rating in the sub-district and district contests. In this connection it may be added that the boys' glee club won a superior rating in the sub-district and district contests and in the final state contest. Our string quartet won a superior rating in the sub-district and district contests and an excellent rating in the state. Helen Wright, a third year girl, stood high in the sub-district contest, but did not earn the right to compete in the district contest. She met unusual competition but was a near equal to the very best who entered that contest. These contests with boys and girls from schools for the sighted have had a most favorable reaction upon the morale of the school. In spite of the handicap under which the pupils must work these contests have had the effect of encouraging their efforts, regardless of sighted competition.

SOCIAL AND RELIGIOUS TRAINING

Social, moral, and religious development are to a certain extent the result of habit and environment; but, on the other hand, they are somewhat the result of example and training. Therefore, it is of the utmost importance that teachers, officers, matrons, supervisors and employees should be men and women who are not only efficient in the several departments of work, but who are also examples worthy of emulation. Toward this end the utmost care and caution have been exercised to bring to the Iowa School for the Blind men and women not only of educational equipment but whose standards of morality are high. While no preference is ever expressed regarding church affiliations, yet an attempt has been made to secure for all departments men and women who have

the Christian bias and belief. While no attempt is ever made to prescribe the opinions of any employee of the School, yet it is the policy of the School to guard the children who are within the ages of immaturity from religious questions that belong only to maturity. There are so many fundamental and beautiful truths of religion that are accepted by all truth-seeking men and women, that there is little excuse for surrounding small children and adolescent boys and girls with an atmosphere of doubt and unbelief.

On six days of the week pupils and teachers meet for worship in the Chapel. Here some of the great hymns are sung, prayer is offered, an address based upon moral considerations is given, and frequently special music by students is heard. A sincere attempt is made to create a wholesome religious atmosphere.

On Sunday, classes meet for the study of the Bible; the students meet for devotional service in the afternoon; and attendance at some one of the churches is required, unless inclement weather or sickness excuses. The afternoon devotional services are optional; and the church which the pupil attends is subject to student or parental choice. These attempts to surround the students with religious and moral influences do not always reach the sanctuary of the heart, but for the most part they have been beneficial and helpful.

EXTRA CURRICULAR ACTIVITIES

It has been the policy of the administration of the Iowa School for the Blind to keep in mind not only the preparation of students for usefulness as citizens of our commonwealth, but also to give them opportunities for participation in various activities, as students, outside the regular prescribed course of study. To this end the Jordan Society for high school students was organized a few years ago. This society is officered by students and its activities are planned by student committees. There is the Prayer Meeting committee, which plans the Sunday afternoon devotional programs; the Literary Committee, which helps to plan for periodical literary programs; the Social Committee, which helps in planning social entertainments. At frequent intervals this society meets as a whole for parliamentary practice. Usually these meetings have been full of interest and profit.

During the years of the biennium there have been piano recitals, orchestra recitals, choir recitals, voice recitals, dramatic and literary entertainments, concerts in which there appeared students from all the different music and literary departments of the School, besides dramatic performances in which the students take great delight. Thanksgiving, Christmas, Easter, Mother's Day, Lincoln's and Washington's birthdays were observed with appropriate programs, which were open to the public. During the past biennium the following plays were produced by our students: The Millionaire, Little Teacher, Only Sally Ann, Nevertheless, It Won't Be Long, Washington at Valley Forge, a Lincoln play and a Camp Fire play. Other programs given in the School Chapel during the biennium are: Annual Glee Club Concert, Orchestra Concert, Christmas Carol Service, Orchestra and Boys' Glee Club, Assembly Program in Newton and at the State House, Washington Day Program, Assembly Program by Students for Visiting District Convention of the Christian Endeavor, Easter Vesper Service, Annual Concert. For 1933-1934, the following: Memorial Services for Dr. J. E. Luckey, school physician for 18 years, Armistice Day Program, Orchestra Concert, Christmas Carol Concert, Annual Boys' Glee Club Concert, Benton County Boy Scout Court of Honor, Easter Vespers, Recital, "The Fairy Book," given by Music pupils of Miss Manning and Miss Tiberghien, Senior Musical, and the Baccalaureate sermon.

STUDENT SERVICES

As a rule students are not required to serve to any great extent in connection with the domestic duties of the School. Each student is

taught to make his own bed and to care for his own room. Students are also asked to assist with the dining room service at meal time. All this service is, of course, without compensation except what may come from experience. It has not been thought best to require students to assist in the kitchen except in cases of emergency. The following program of a day's activities will go to show that if the school duties are faithfully discharged, the students at the Iowa School for the Blind lead a very busy life:

6:00 A. M.	Rising bell
6:45 A. M.	Breakfast
7:15 A. M. to 7:45 A. M.	Care of rooms
7:45 A. M. to 8:00 A. M.	Preparation for Chapel and School
8:00 A. M.	Chapel
8:25 A. M. to 11:35 A. M.	Classroom activities
11:35 A. M. to 11:45 A. M.	Preparation for dinner
11:45 A. M. to 12:15 P. M.	Dinner
12:15 P. M. to 1:10 P. M.	Rest
1:15 P. M. to 4:00 P. M.	Classroom activities
4:00 P. M. to 6:00 P. M.	Rest and outdoor recreation
6:00 P. M.	Supper
6:15 P. M. to 7:00 P. M.	Rest and recreation
7:00 P. M. to 9:00 P. M.	Study and reading
9:00 P. M. to 9:30 P. M.	Recreation and preparation for bed

This report should not be closed without acknowledging a debt to the faithful teachers, matrons and supervisors, and other employees who have served the Iowa School for the Blind. Nowhere could a more devoted service be found. Such service cannot be fully compensated for in dollars and cents—it is altogether too high for that. A state that can gather together a band of such efficient, devoted workers, men and women who are able to work early and late, through discouragements and with inspiration, is indeed fortunate. Iowa is indeed fortunate, and my hat is off to the faithful and efficient band of workers at the Iowa School for the Blind.

TRADES TAUGHT

This part of the report has probably been made with sufficient fullness under the topic "Studies Pursued," but it may not be out of place to restate them for the sake of clearness. The following trades have been taught:

Broom-making, chair caning, mat weaving, pattern weaving, rug and carpet weaving, basket making, piano tuning, and hammock tying. Besides these, not to be considered as trades but preparation for future occupation, there are typewriting, stenography, and dictaphone operating, together with music. When dictaphone operation and typewriting are mentioned it is at once concluded by many people that they are useless as occupations for the blind; but it must not be forgotten that there are a great many boys and girls who have sight enough to enable them to correct their own work. Besides, they are not wholly impracticable for pupils who are totally blind. Experience has demonstrated that the totally blind may make successful typists and dictaphone operators. In the teaching of these occupations the School has not lost sight of the great educational value of hand-training through such occupations. Reference is made to this fact because frequently there are parents who bring pupils to us to whom these trades and occupations seem foreign to their own plans for their children. However, it is believed that they give important means of education in the broad sense of the term. Typewriting is taught during six years of the School course.

During the year 1927-1928 brush making and Navajo rug weaving and the fibre chair caning were introduced.

DENTAL REPORT—1932-1934

The following report is submitted from the Dental Department of the Iowa School for the Blind, covering dental activities for 1932-1934:

	1932-1933	1933-1934
Students examined	168	174
Prophylaxis	243	226
Silver amalgam:		
Occlusal	17	27
Prox.-occ.	35	37
Pits	16	21
Copper amalgam:		
Permanent	4	11
Deciduous	20	40
Copper cement	4	0
Synthetics	22	24
Pulp treatment	5	1
Gum treatment	9	9
Vincent's treatment	14	0
Gold inlays	1	0

In the fall all the students were examined and the amount of work to be done was charted. The worst cases were then completed first. In general, it was found that the majority of the work, exclusive of cleaning was on the new students.

Each student when he had his work completed was given a demonstration as to the care of the teeth and how to brush them.

X-rays when needed for diagnosis were taken at the Vinton Hospital.

Some very interesting facts were noted as to arrested caries due to change in diet.

PHYSICIAN'S REPORT—1932-1934

Vinton, Iowa, June 27, 1934.

Supt. F. E. Palmer,
Iowa School for the Blind.

I here with present the biennial hospital report for the years 1932-1933 and 1933-1934.

At the beginning of the school year each pupil has been given a physical examination and a record made of the physical condition found at this time—and to discover if possible any signs of infection or contagion or any defect that can be corrected.

The procedure of Dick and Shick tests and smallpox vaccination has been carried out. Wassermann tests were made for the purpose of diagnosis and treatment when advised. An examination of the eye condition, diagnosis and recommendation for treatment if advisable is given each student by Dr. C. S. O'Brien of the University Hospital at his visits to the school twice each year.

Miss Rose Crowley, the efficient school nurse, keeps all the department records from which the following reports are made.

JOHN W. BAIRD, D. D. S.

PHYSICIAN'S REPORT

1932-1933—1933-1934

Supt. O. L. McIntire,
Iowa School for the Deaf.

I have the honor to submit the following report of the Medical Department of the Iowa School for the Deaf for the Biennial Period closing June, 1934.

At the opening of every school year, as for many years in the past, each pupil is given a thorough physical examination. This is done to discover any evidence of contagion and any physical defects that may be present and may be corrected. Recommendations are made at this time for care and treatment to those pupils needing attention.

Early each year, all pupils requiring it are immunized against diphtheria and smallpox. It is satisfactory to note that no cases of either of these diseases have developed after the effect of the immunization could be expected. The only cases of diphtheria which we have had have occurred before the immunization could be expected to take effect.

Every year Drs. F. W. and Abbott Dean have examined the eyes of all new pupils and also those pupils having eye defects.

Mrs. Grace Hoff, the very efficient school nurse, keeps the records from which the following reports are made.
