## **Executive Summary**

#### Overview

This plan was developed to assist the City of Grand Junction with managing its urban forest, including budgeting and future planning. Trees can provide a multitude of benefits to the community, and sound management allows a community to best take advantage of these benefits. Management is especially important considering the serious threats posed by forest pests such as the emerald ash borer (EAB). EAB is an invasive insect imported from Eastern Asia on wood shipping crates that kills all species of ash trees (this does not include mountain ash). There is a strong possibility that 21% of Grand Junction's city owned trees (ash) will die once EAB becomes established in the community, unless preventative treatment is used. With proper planning and management, the costs of removing dead and dying trees can be extended over years, mitigating public safety issues.

#### **Inventory and Results**

In 2019, a tree inventory was conducted using Global Positioning System (GPS) data collectors. The inventory was a complete inventory of street and park trees. Below are some key findings of the 1071 trees inventoried.

- Grand Junction's trees provide \$209,154 of benefits annually, an average of \$195 a tree
- There are over 46 species of trees
- The top three genera are: green ash 21%, hackberry 11%, and silver maple 10%.
- 79% of trees are recommended for some type of management
- 70 trees are recommended for removal

#### Recommendations

The core recommendations are detailed in the Recommendations Section. The Emerald Ash Borer Plan includes management recommendations as well. Below are some key recommendations.

- Of the 70 trees needing removal, 8 trees are of critical concern and are over 24 inches in diameter at 4.5 ft and must be addressed immediately. Additionally 19 more or the 70 trees over 18 inches are in need of immediate removal. \*City ownership of the trees recommended for removal should be verified prior to any removal\*
- 112 of the 227 ash trees should be carefully examined, as they have one or more symptoms that could be related to an EAB infestation
- All trees should be pruned on a routine schedule- one third of the city every other year
- Plant a diverse mix of trees that do not include: ash, maple, cottonwood, poplar, box elder, Chinese elm, evergreen, willow or black walnut
- Check ash trees with a visual survey yearly
- There is no current budget for forestry practices such as tree removal. It is a cut down as needed policy. The latest tree removal approved was for three trees and the average cost was \$700 per tree. – Suggestion: request a budget increase to \$10,000 annually and apply for grants to plant replacement trees

## Introduction

This plan was developed to assist Grand Junction with the management, budgeting and future planning of their urban forest. Across the state, forestry budgets continue to decrease with more and more of that money spent on tree removal. With the anticipated arrival of Emerald Ash Borer (EAB), an invasive pest that kills native ash trees, it is time to prepare for the increased costs of tree removal or treatment and replacement planting. With proper planning and management of the current canopy in Grand Junction, these costs can be extended over years and public safety issues from dead and dying ash trees mitigated.

Trees are an important component of Grand Junction' infrastructure and one of the greatest assets to the community. The benefits of trees are immense. Trees provide the community with improved air quality, stormwater runoff interception, energy conservation, lower traffic speeds, increased property values, reduced crime, improved mental health and create a desirable place to live, to name just a few benefits. It is essential that these benefits be maintained for the people of Grand Junction and future generations through good urban forestry management.

Good urban forestry management involves setting goals and developing management strategies to achieve these goals. An essential part of developing management strategies is a comprehensive public tree inventory. The inventory supplies information that will be used for maintenance, removal schedules, tree planting and budgeting. Basing actions on this information will help meet Grand Junction's urban forestry goals.

## Inventory

In 2019, a tree inventory was conducted that included 100% of the city owned trees on both streets and parks. The tree data was collected using a handheld Global Positioning System (GPS) receiver. The data collector gives Geographic Information Systems (GIS) coordinates with an accuracy of 3 meters, which can be used in Arc GIS as an active GIS data layer. Because the inventory is a digital document the data can be updated with new information and become a working document.

The programming used to collect tree information on the data collectors was written to be compatible with a state-of-the-art software suite called i-Tree. i-Tree was developed by the USDA Forest Service to quantify the structure of community trees and the environmental services that trees provide. The i-Tree suite is a public domain which can be accessed for free.

To quantify the urban forest structure and benefits, specific data is collected for each tree. This data includes: location, land use, species, diameter at 4.5 ft, recommended maintenance, priority of that maintenance, leaf health, and wood condition. Additionally, signs and symptoms associated with EAB were noted for all ash trees. The signs and symptoms noted were canopy dieback, epicormic shoots, bark splitting, D-shaped borer exit holes, and woodpecker damage.

## **Inventory Results**

The data collected for the 1071 city trees was entered into the USDA Forest service program Street Tree Resource Analysis Tool for Urban forestry Management as part of the i-Tree suite. The following are results from the i-Tree STREETS analysis.

## **Annual Benefits**

#### **Annual Energy Benefits**

Trees conserve energy by shading buildings and blocking winds. Grand Junction's trees reduce energy related costs by approximately \$57,346 annually (Appendix A, Table 1). These savings are both in Electricity (272.8 MWh) and in Natural Gas (37,387.4 Therms).

#### **Annual Stormwater Benefits**

Grand Junction's trees intercept about 2,954,137 gallons of rainfall or snow melt a year (Appendix A, Table 2). This interception provides \$80,057 of benefits to the city.

#### **Annual Air Quality Benefits**

Air quality is a persistent public health issue in Iowa. The urban forest improves air quality by removing pollutants, lowering air temperature, and reducing energy consumption, which in turn reduces emissions from power plants, and emitting volatile organic matter (ozone). In Grand Junction, it is estimated that trees remove 3592.9 lbs of air pollution (ozone ( $O_3$ ), particulate matter less than 10 microns (PM10), carbon monoxide (CO), nitrogen dioxide (NO<sub>2</sub>), and sulfur dioxide (SO<sub>2</sub>)) per year with a net value of \$10,203 (Appendix A, Table 3).

#### **Annual Carbon Benefits**

Carbon sequestration and storage reduce the amount of carbon in the atmosphere, mitigating climate change. In Grand Junction, trees sequester about 1,000,224 lbs of carbon a year with an associated value of \$7,502 (Appendix A, Table 5). In addition, the trees store 11,775,199 lbs of carbon, with a yearly benefit of \$88,314 (Appendix A, Table 4).

#### **Annual Aesthetics Benefits**

Social benefits of trees are hard to capture. The analysis does have a calculation for this area that includes: aesthetic value, property values, lowered rates of mental illness and crime, city livability and much more. Grand Junction receives \$54,046 in annual social benefits from trees (Appendix A, Table 6).

#### **Financial Summary of all Benefits**

According to the USDA Forest Service i-Tree STREETS analysis, Grand Junction's trees provide \$209,154 of benefits annually. Benefits of individual trees vary based on size, species, health and location, but on average each of the 1071 trees in Grand Junction provide approximately \$195 annually (Appendix A, Table 7).

## **Forest Structure**

#### **Species Distribution**

Grand Junction has over 46 different tree species along city streets and parks (Appendix A, Figure 1).

The distribution of trees by genera is as follows:

green ash	224	21%
hackberry	117	11%
silver maple	110	10%
norway maple	103	10%
black walnut	83	8%
catalpa	66	6%
blue spruce	57	5%
black maple	50	5%
apple (crab)	46	4%
lilac	26	2%
other	189	18%

#### Age Class

Most of Grand Junction's trees (58%) are between 12 and 30 inches in diameter at 4.5 ft (Appendix A, Figure 2). For age, it is preferred that the highest amounts of trees are in the smallest size category (a downward slope) to prepare for natural mortality and to maintain canopy cover. Grand Junction's size curve is on the larger side, indicating a mos stand.

#### **Condition: Wood and Foliage**

Both wood condition and leaf condition are good indicators of the overall health of the urban forest. The foliage condition results for Grand Junction indicate that 97% of the trees are in good health, with only 1% of the foliage in poor health, dead or dying (Appendix A, Figure 3 & Appendix B, Figure 3). Similarly, 76% of Grand Junction's trees are in good health for wood condition (appendix A, Figure 4 & Appendix B, Figure 3). Wood condition that is in poor health, dead or dying is about 7% of the population. This 7% is an estimate of trees that need management follow up.

#### **Management Needs**

The following outlines the specific management needs of the street and park trees by number of trees and percent of canopy (Appendix B, Figure 3).

Crown Cleaning	764	71%
Tree Removal	70	7%
Crown Reduction	6	<1%
Crown Raising	1	<1%
Tree Staking	0	0%

#### **Canopy Cover**

The total canopy with both private and public trees is 17%, 106 acres. The canopy cover included in the Grand Junction inventory includes approximately 31 acres (Appendix A, Figure 4). The City's Canopy goal is to increase canopy by 3%, in 30 years. To achieve this goal it is estimated that 45 trees need to be planted annually on public and private lands.

#### Land Use and Location

The majority of Grand Junction's city and park trees are in planting strips in single family residential neighborhoods (Appendix A, Figure 6 & Appendix A, Figure 7). The following describes the land use and locations for the street and park trees.

Land Use			
Single family residential	89%		
Park/vacant/other	9%		
Small commercial	2%		
Industrial/Large commercial	0%		
Multifamily residential	0%		
Location			
Front yard	63%		
Planting strip	37%		
Cutout (surrounded by pavement)	0%		
Front yard	0%		

## Recommendations

#### **Risk Management**

Hazardous trees can be a significant threat to both people and property. Trees that are dead or dying, or that have large issues such as trunk cracks longer than 18 inches should be removed. Broken branches and branches that interfere with a motorist's vision of pedestrians, vehicles, traffic signs and signals, etc should be removed.

#### Hazardous trees

Grand Junction has 10 critical concern trees that need immediate removal. These trees can be seen on the Location of Trees with Recommended Maintenance map (Appendix B, Figure 4). It is recommended to start with the large diameter critical concern trees first. There are 8 trees over 24 inches in diameter at 4.5 ft that should be addressed immediately. Please refer to the six year maintenance plan at the end of this section. After all of the critical concern trees are addressed, there should be follow up on the trees marked as needing immediate maintenance. There are a total of 45 trees with these needs.

#### Poor tree species

After the removal of the critical concern trees, ash trees in poor health should be assessed for removal (Appendix B, Figure 3 & Appendix B, Figure 4). Of the 70 removals, 24 are ash trees. There are a total of 227 ash trees, and 80 of those have signs and symptoms that have been associated with EAB. In addition, there are 14 trees that are in poor health. \*City ownership of the trees recommended for removal should be verified prior to any removal\*

#### **Pruning Cycle**

Proper pruning can extend the life and good health of trees, as well as reduce public safety issues. In the Management Needs section of the Findings there are four main maintenance issues to be addressed: routine pruning, crown cleaning, crown raising, and crown reduction. Crown cleaning removes dead, diseased, and damaged limbs. Crown raising is the removal of lower branches that are 2 inches in diameter or larger in the case of providing clearance for pedestrians or vehicles. Crown reduction is removing individual limbs from structures or utility wires. It is recommended that all trees be pruned on a routine schedule every five to seven years. Please refer to the six year maintenance plan for further information.

#### Planting

Most of the planting over the next 5 years will replace the trees that are removed. It is recommended to plant 1.2 trees for every tree removed, since survival rates will not be 100%. Please refer to the six year maintenance plan at the end of this section. It is not essential that the new trees be planted in the same location of the trees being removed. However, maintaining the same number of trees helps ensure continuation of the benefits of the existing forest in Grand Junction.

It is important to plant a diverse mix of species in the urban forest to maintain canopy health, since most insects and diseases target a genus (ash) or species (green ash) of trees. Current diversity recommendations advise that a genus (i.e. maple, oak) not make up more than 20% of the urban forest and a single species (i.e. silver maple, sugar maple, white oak, bur oak) not make up more than 10% of the total urban forest. Presently, the forest is heavily planted with maple (25%) and ash (21%) (Appendix A, Figure 1). Maples should not be planted until this percentage can be lowered. Also, ash trees have not been recommended since 2002, due to the threat of EAB. Other species to avoid because they are public nuisances include: cottonwood, poplar as outlined in section 3-2-1-h of the city ordinance (Appendix C). Other species to avoid are box elder, Chinese elm, evergreen, willow or black walnut. All trees planted must meet the restrictions in city ordinance 3-2-1-h (Appendix C).

#### **Continual Monitoring**

Due to the threat of EAB, it is important to continuously check the health of ash trees. It is recommended that ash trees be checked with a visual survey every year for tree decline and for the following signs and symptoms: canopy dieback, epicormic shoots, bark splitting, D-shaped borer exit holes, and woodpecker damage.

#### Six Year Maintenance Plan

Year 1

Removal: 10 critical concern trees and 2 additional large diameter trees needing immediate removal.

Planting and Replacement: 14 trees to be planted in open locations

Young Tree Pruning & Maintenance:

Visual Survey for signs and symptoms of EAB

#### Year 2

Removal: 11 large diameter trees needing immediate removal Planting and Replacement: 13 trees in open locations from year one removals Young Tree Pruning & Maintenance: Routine trimming: Contract to trim 1/3 of the city trees Visual Survey for signs and symptoms of EAB

#### Year 3

Removal: 10 remaining trees needing immediate removal plus 2 ash trees in poor health Planting and Replacement: 14 trees to be planted in open locations and locations from previous removals

Young Tree Pruning & Maintenance:

Visual Survey for signs and symptoms of EAB

#### Year 4

Removal: 11 ash trees in poor health Planting and Replacement: 13 trees in open locations from previous removals Routine trimming: Contract to trim 1/3 of the city trees Young Tree Pruning & Maintenance: Visual Survey for signs and symptoms of EAB

#### Year 5

Removal: 5 ash trees in poor health plus 7 more of the largest trees needing removal \*Or saving for ash tree treatment and/or future ash removal

Planting and Replacement: 14 trees to be planted in open locations and locations from previous removals

Young Tree Pruning & Maintenance:

Visual Survey for signs and symptoms of EAB

#### Year 6

Removal: 12 remaining trees needing removal

Grand Junction, IA 2020 Urban Forest Management Plan

\*Or saving for ash tree treatment and/or future ash removal Planting and Replacement: 14 trees in open locations from previous removals Routine trimming: Contract to trim 1/3 of the city trees Young Tree Pruning & Maintenance: Visual Survey for signs and symptoms of EAB

\*Reduction of ash over 6 years: Approximately 30 ash trees removed (approximately 13% of ash). It will take approximately 17 additional years to remove the remaining ash trees with the current budget. EAB could potentially kill all ash within 4 to 15 years of its arrival. \*\*To remove all ash trees within 6 years, the budget would need to be increased to \$26,500 a year.

## **Emerald Ash Borer Plan**

#### Ash Tree Removal

Tree removal will be prioritized with dead, dying, hazardous trees to be removed first (Appendix B, Figure 4). Next will be all ash in poor condition and displaying signs and symptoms of EAB (Appendix B, Figure 2 & Appendix B, Figure 3). \*City ownership of the tree recommended for removal should be verified prior to any removal\*

#### **Treatment of Ash Trees**

Chemical treatment can be an effective tool for communities to spread removal costs out over several years while allowing trees to continue to provide benefits. However, treatment is not recommended if EAB is more than 15 miles away from the community. For more information on the cost of treatment strategies visit <u>http://extension.entm.purdue.edu/treecomputer/</u>

#### **EAB Quarantines**

EAB is an extremely destructive plant pest and it is responsible for the death and decline of millions of ash trees. Ash in both forested and urban settings constitute a significant portion of the canopy cover in the United States. Current tools to detect, control, suppress and eradicate this pest are not as robust as the USDA would desire. In order to stay ahead of this hard to detect beetle, the USDA is attempting to contain the beetle before it spreads beyond its known positions by regulating articles.

A regulated article under the USDA's quarantine includes any of the following items:

- emerald ash borer
- firewood of all hardwood species (for example ash, oak, maple and hickory)
- nursery stock and green lumber of ash
- any other ash material, whether living, dead, cut or fallen, including logs, stumps, roots, branches, as well as composted and not composted chips of the genus ash (Mountain ash is not included)

In addition, any other article, product or means of conveyance not listed above may be designated as a regulated article if a USDA inspector determines that it presents a risk of spreading EAB once a quarantine is in effect for your county.

#### Wood Disposal

A very important aspect of planning is determining how wood infested with EAB will be handled, keeping in mind that quarantines will restrict its movement. Consider who will cut and haul the dead and dying trees? Is there an accessible, secured site big enough to store and sort the hundreds of trees and the associated brush and chips? How will wood be disposed of or utilized? Do you have equipment capable of handling the amount and size of ash trees your tree inventory has identified? Once your county is under quarantine for EAB, contact USDA-APHIS-PPQ at 515-251-4083 or visit the website

http://www.aphis.usda.gov/plant health/plant pest info/emerald ash b/regulatory.shtml. Wood waste can be disposed of as you normally would if your county is not part of a quarantine.

#### **Canopy Replacement**

As budget permits, all removed trees will be replaced. All trees will meet the restrictions in city ordinance 3-2-1-h (Appendix C). The new plantings will be a diverse mix and will not include ash, maple, cottonwood, poplar, box elder, Chinese elm, evergreen, willow or black walnut.

#### **Postponed Work**

While finances, staffing and equipment are focused on the management of ash, usual services may be delayed. Tree removal requests on genera other than ash will be prioritized by hazardous or emergency situations only.

#### Monitoring

It is recommended that ash trees be checked with a visual survey every year for tree death and for the following signs and symptoms: canopy dieback, epicormic shoots, bark splitting, D-shaped borer exit holes, and woodpecker damage.

#### **Private Ash Trees**

It is strongly recommended that private property owners start removing ash trees on their property upon arrival of EAB if preventative treatments are not being used.

## **Budget**

#### Proposed Budget

Total \$69,400 over 6 years (Keep in mind there are grant opportunities for tree planting)

#### FY 2021 Budget

Removal: \$8,400 Planting: \$2,100 Watering & Maintenance: \$500

#### FY 2022 Budget

Removal: \$7,700 Planting: \$1,950 Routine trimming: \$1,700 Watering & Maintenance: \$500

#### FY 2023 Budget

Removal: \$8,400 Planting: \$2,100 Watering & Maintenance: \$500

#### FY 2024 Budget

Removal: \$7,700 Planting: \$1,950 Routine trimming: \$1,700 Watering & Maintenance: \$500

#### FY 2025 Budget

Removal: \$8,400 Planting: \$2,100 Watering & Maintenance: \$500

#### FY 2026 Budget

Removal: \$8,400 \*Or saving for ash tree treatment and/or future ash removal Planting: \$2,100 Routine trimming: \$1,700 Watering & Maintenance: \$500

\*Reduction of ash over 6 years: approximately 30 ash trees removed (approximately 13% of ash). It will take approximately 21 years to remove all ash with the current budget.

#### Proposed Budget Increase

EAB could potentially kill all ash trees in Grand Junction within 4 years of its arrival. To remove all ash trees within 6 years the budget would need to be increased to \$26,500 a year. Additionally, it is recommended that Grand Junction apply for grants to fund replacement trees. Utility Company grants are usually between \$500 and \$10,000 for community-based, treeplanting projects that include parks, gateways, cemeteries, nature trails, libraries, nursing homes, and schools.

Another option being considered by many communities is treating a number of selected trees, either to maintain those trees in the landscape or to delay their removal – to spread out the costs and number of trees needing removed all at once. Trunk injection is administered every two years for the life of the tree. If treatment is discontinued, the tree dies. For instance, in this treatment scenario, the average ash diameter is 20 inches and at \$15 per inch, about 4 trees could be treated per year (every other year treatment). This would be 8 trees selected for

treatment, and Grand Junction would still need to find \$5,600 for removal. These are alternatives to straight removal of ash trees. However, whether or not the treatment option is selected, there will be an increased cost of dealing with ash trees if EAB is found in Grand Junction. It is suggested to consider increasing the budget to plan for this.

3-2-1 The term "nuisance" means whatever is injurious to health, indecent, or unreasonably offensive to the senses or an obstacle to the free use of property, so as essentially to unreasonably interfere with the comfortable enjoyment of life or property. The following are declared to be nuisances:

h. Cotton-bearing cottonwood trees and all other cotton-bearing poplar trees in the City.

The State of Iowa is an Equal Opportunity Employer and provider of ADA services.

Federal law prohibits employment discrimination on the basis of race, color, age, religion, national origin, sex or disability. State law prohibits employment discrimination on the basis of race, color, creed, age, sex, sexual orientation, gender identity, national origin, religion, pregnancy, or disability. State law also prohibits public accommodation (such as access to services or physical facilities) discrimination on the basis of race, color, creed, religion, sex, sexual orientation, gender identity, religion, national origin, or disability. If you believe you have been discriminated against in any program, activity or facility as described above, or if you desire further information, please contact the Iowa Civil Rights Commission, 1-800-457-4416, or write to the Iowa Department of Natural Resources, Wallace State Office Bldg., 502 E 9<sup>th</sup> St, Des Moines IA 50319.

If you need accommodations because of disability to access the services of this Agency, please contact the Director at 515-725-8200.
