December 15, 1964

To the Honorable Harold E. Hughes, Governor of Iowa and Members of the 61st General Assembly:

In accordance with Section 262.26 of the Code of Iowa, we are transmitting herewith the Biennial Report of the State Board of Regents for the fiscal period of July 1, 1962 to June 30, 1964.

The Report is made up of the following three basic sections:

Section I. The financial askings of the institutions as submitted to the Board of Regents by the institutional Executives for the biennial period of July 1, 1965 to June 30, 1967.

Section II. The financial askings of the Board of Regents to the 61st General Assembly for the institutions for the biennial period of July 1, 1965 to June 30, 1967.

Section III. The Reports of each institution for the period of July 1, 1962 to June 30, 1964. These Reports include those of the Executives, the Secretaries, the Treasurers, the Business Managers, and the Registrars as well as related financial information.

The Board is mindful of the tremendous responsibility for maintaining top-quality institutions for the State of Iowa. If Iowa is to continue to move ahead, we must build upon the strong foundation of Higher Education. The members of the Board of Regents, as lay representatives of the people of Iowa, are dedicated to that purpose.

INTRODUCTORY STATEMENT

The Code of the State of Iowa requires that the Board of Regents shall prepare, on a biennial basis, a Report of the institutions which are governed by the Board. Such Report shall be made to the Governor and the Legislature. It shall contain information as to the expenditures, financial askings of the institutions and the financial requests of the Board to the legislature.

Therefore, the Biennial Report is made up of three basic sections as follows:

Section I

This section contains, in summary form, the requests of the Executive Officer of each institution for the biennial period of 1965-67 as presented to the Board. It contains a brief statement as to some of the thinking behind the request and the summarized financial figures. The final request of the Executive Officer is the result of months and months of evaluations and determinations by hundreds of people involved in each institution. Eliminations and reductions of very desirable and even necessary items result in an attempt to make the asking reasonable. It finally appears as a minimum request which has been worked out cooperatively. Along the way, each institution, working through commonly established formulas, has treated common problems in a similar way. Many joint meetings and conferences were held and each institution's request represents a compromise.

Section II

This section shows the figures of the State Board of Regents' financial askings of the 61st General Assembly for the biennial period of 1965-67. It is the result of the Board's evaluations and decisions on the items and amounts asked by the Executive of each institution as contained in Section I. It represents determinations by another group, the State Board of Regents, and some changes and deletions were made. The final amounts and distributions represent, in the opinion of the Board, the amount that the legislature should appropriate for the 1965-67 years.

Section III

This section includes the reports of the institutions for the past two-year period. The Presidents and the Superintendents submit a report. The financial officers and the Treasurers submit reports of receipts and expenditures and other financial activities. The Registrars submit facts and figures on enrollments and other related material. More complete and more detailed information is available in individual institutional reports.

The Biennial Report is prepared in the Central Office of the Board of Regents in the State Office Building in Des Moines, Iowa. The institutional material is, of course, prepared by the different institutions.

SECTION I

Financial needs of institutions as presented to the State Board of Regents.

BIENNIUM 1965-67

INSTITUTIONAL REQUESTS TO THE BOARD OF REGENTS FOR 1965-67

INTRODUCTION

The following pages outline the legislative requests of the Board of Regents institutions for operating, repair, and capital funds for the biennium 1965-67. The basic procedure for preparing the requests was similar to that used in the presentation to the 60th General Assembly, and is the method followed by all institutions under the Board. Following is a brief description of the procedures followed for determining the amounts needed.

The <u>Starting Base</u> represents the current level of operation as established by the budgets for 1964-65, approved by the State Board of Regents on June 19, 1964. The use of the 1964-65 budget as the starting base provides a realistic point of departure because it is based on the latest schedule of salaries, general expense, and other cost estimates and the enrollment to be served. It also reflects the increase in income from other than State funds which will be available from the student fee increases that became effective in September, 1964.

Additions to the starting base are the dollars needed to cover increased operating costs for the biennium 1965-67. By combining the starting base and the additions to the base, a proposed budget for each year of the coming biennium is determined.

Part of the proposed budgets will be met from funds other than state appropriations -- student fees, sales, endowment interest, federal funds, overhead charges to research contracts, etc. The total of these estimated receipts is deducted from the proposed budget, and the remainder is the amount which is requested of the General Assembly.

The proposed additions to the base are as follows:

Equipment funds - No request for additional equipment funds is being presented for 1965-67 in the institutions of higher education.

Library books - The increase requested for library books is based upon an administrative review of recommendations of the Librarian and his staff. For many years the book budget has been held low for the reason that space was not available for the additional volumes. Since the completion of the Library Additions an effort has been made to step up the rate of acquisition of new books.

Enrollment increase - The cost of providing for increased enrollment in the coming biennium has been computed by a "unit cost" formula in the institutions for higher education. Under a directive from the Board of Regents, a joint committee of representatives of the three institutions of higher education spent more than two years developing a uniform method of cost calculation. The committee arrived at unit costs per full-time equivalent student at the respective institutions for each of five levels of instruction (lower, upper, Masters, Advanced Graduate, and Professional) for fiscal year 1962-63).

These unit costs were then projected to 1963-64 based on the comparative operating costs and enrollments of the two years. Estimates of enrollment increases for 1965-66 and 1966-67 were developed by the Registrars. The 1963-64 unit costs at each level multiplied by the anticipated increase in enrollment at the corresponding level produces figures which represent the best estimate of the cost of accommodating the additional'students expected during the coming biennium.

Since the calculations are based on 1963-64 costs, they are thought to be well on the conservative

Salary increases for academic staff (teaching, research, administrative and professional) - For some years it has been the goal of the Regents' institutions to reach a salary level for academic staff which is competitive among similar institutions in an 11-state midwestern area (Michigan, Indiana, Illinois, Wisconsin, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Missouri, and Iowa). A fair competitive salary position is considered by the Board to be equivalent to third place among this group of institutions. It is anticipated that to maintain third place through 1965-66 will require an increase over 1964-65; 1966-67, an additional increase over 1965-66. The cost of increased Social Security tax is also included.

<u>Salary and wage increases</u> - <u>non-academic staff</u> (<u>clerical</u>, <u>maintenance</u>, <u>service</u>) - To maintain competitive salary and wage scales will require an increase for the first year of the biennium and an additional increase the second year. The Social Security tax increase for non-academic staff is included.

<u>General expense increase</u> - The request for increased general expense funds is based upon a 2.8% cost increase per year beginning July 1, 1965. This is based on a cost index and projection developed by statistical methods which gives proper weightings to the various types of items purchased from General Expense funds by the institution. side when used for the 1965-66 and 1966-67 projections.

Cost of Expanded Summer Session (year round operation) - It is anticipated that sharply increased enrollments will occur in the summer sessions as a result of the emphasis being given to year-round operation. Since the Enrollment Increase computation is based on "full-time equivalent" students, the normal expense of increased summer enrollment would be met by funds provided under the Enrollment Increase formula. However, the expansion of summer quarter offerings to provide complete and accelerated instructional programs involves an additional cost of operation. Under the present plan to offer more complete summer programs, many more courses must be offered, which cannot be withdrawn because of low enrollment. Firm commitments for teaching faculty must be made (and kept) well in advance of summer because of the many other teaching, research and industrial opportunities available to the staff.

These changes in summer operation cause, in some cases, unduly high costs per student for some of the course offerings in which there is small enrollment. The amount requested for the cost of the expanded summer session has been based upon an estimate prepared after consultation with the Registrar and a review of the probable increase in the number of sections and course offerings. <u>Strengthening and improving programs</u> - The several departments of a university have two important not unrelated functions, namely teaching and research. The strength of a department is measured by the productivity and quality of the research carried on by its staff members as well as by the success attained in the teaching of students. Satisfactory teaching implies not only the conveying of factual information to the student but also the developing of a sincere interest in learning and a stimulating of thought processes to remain a part of the student throughout his entire career.

During the past several years in many areas of study, the supply of trained university faculty members has not kept up with the demands of continuously expanding enrollments. Consequently faculty salaries have increased and universities with limited budgets have had to restrict enrollments or adopt emergency measures to provide instruction. An inescapable consequence has been the large lecture section and/or closed-circuit television instruction accompanied by very extensive use of graduate assistants.

The need for additional funds to augment staffs and strengthen departmental programs is growing extremely critical. In many areas staff members are seriously in need of relief from heavy teaching loads and students also are clamoring for more seasoned and experienced teachers. The use of graduate assistants has expanded to such an extent that in some departments the available senior staff is no longer able to provide adequate instruction in advanced courses and to direct graduate students in research. Equilibrium can be regained only by the addition of senior staff members.

Certain areas of science and technology are also developing and expanding at the present time. To maintain a strong position in the academic world, we cannot afford to ignore such developments. We need to stay abreast of the times and to continuously build and support instructional and research activities in new areas pertinent to our assigned fields of activity.

The detailed needs for strengthening and improving programs were presented to the officials of the universities by the Deans of the respective Colleges. After careful study and evaluation, the Presidents and Superintendents submitted to the State Board of Regents only those needs which, in their judgment, were rated most critical. The Board in turn reviewed the recommendations of the Presidents and Superintendents and selected the programs which, it felt, most needed support by appropriations of the 61st General Assembly. Obviously, through this rigorous sifting process, many worthy proposals had to be eliminated and the amount finally requested was reduced significantly below that considered highly necessary by the several colleges in the universities and schools.

New Programs - No support is being requested for new programs.

Repairs, Replacements and Alterations - Through the years from 1952 to 1963, appropriations for Repairs, Replacements and Alterations did not keep pace with building costs and with the growth of the Physical Plant. Beginning in 1963, appropriations for this purpose were brought up to a level that recognized cost increases; however, little recognition continues to be given to the increased number of buildings to be maintained.

<u>Capital</u> - a description of the projects included in the request for Capital Improvements and for Special Repairs, Replacements and Alterations is included herein.

7

Introduction to STATE UNIVERSITY OF IOWA LEGISLATIVE REQUESTS FOR 1965-67

On the following pages the State University of Iowa presents its needs for operating and capital funds during the 1965-67 biennium. The various elements of these requests are described below:

STARTING BASE: The 1964-65 budget has been used to reflect the current operating level of the University. Additional funds are requested by the University for the following categories of expenditure:

SALARY INCREASES FOR ACADEMIC STAFF: In order to increase academic salaries to competitive levels, the University believes that these should be brought to at least third rank among comparable institutions in the eleven-state area. To accomplish this as of 1963-64, an increase of 6.4% over current salaries would be required. In order to hold third place through 1964-65, 1965-66 and 1966-67 additional increases of 3.8%, 7.1% and 3.8% respectively, would be required. Amounts required reflect adjustments for salary increases provided in 1964-65. Funds are also required to meet the employer's share of the Federal Social Security Tax rate increase (to 4 1/8%) which will take effect on January 1, 1966.

SALARY AND WAGE INCREASES FOR NON-ACADEMIC STAFF: In order to increase non-academic salaries and wages to meet competition of prevailing rates in the local area for 1965-66 an increase of 7% over the current budget would be required. An additional 3.5% increase would be required to maintain a competitive level for 1966-67. Amounts required reflect adjustments for salary and wage increases provided in 1964-65. Funds are also required to meet the employer's share of the Federal Social Security Tax rate increase (to 4 1/8%) which will take effect on January 1, 1966.

GENERAL EXPENSE: To meet higher costs for most of the items which the University buys, an increase of 2.8% over the current budget would be required for 1965-66 and an additional 2.8% for 1966-67. level approximately midpoint among the second 10 leading university libraries and to provide additional funds for books in the law library, an increase of \$232,000 would be required for each year of the biennium.

ENROLLMENT INCREASE EXPENSE: To provide funds for large increases in the number of students, an increase of \$952,905 for 1965-66 and \$2,030,548 for 1966-67 over the current budget would be required. These amounts are based on unit costs by level of instruction for 1963-64 using estimated increased enrollments by level for 1965-66 and 1966-67 over 1964-65.

SUMMER SESSION EXPANSION: To provide for the additional teaching staff and other expenses to expand course offerings for the 12 weeks summer session an amount of \$57,500 would be required for 1965-66 and \$132,500 for 1966-67.

STRENGTHENING CURRENT PROGRAMS: These needs have been determined on a college and departmental level.

*

More than one-fifth of the University's general operating budget is met each year from non-appropriated funds, the chief source of such funds being the fees paid by S.U.I. students. Student fees were raised by the Board of Regents in the spring of 1963 to provide more support for the S.U.I. budget, particularly in the area of faculty salaries.

*

The same general system (itemized additions to the Starting Base) is followed in developing the four other budgets for which the University is responsible: University Hospitals, Psychopathic Hospital, State Bacteriological Laboratory, Hospital School for Severely Handicapped Children. All five budget proposals appear on the following pages.

BOOK EXPENSE: To provide funds with which to reach and maintain a general library of books at a

FINANCIAL NEEDS

Presented to

STATE BOARD OF REGENTS

JAMES H. HILTON, President

for

BIENNIUM 1965-67

LEGISLATIVE REQUESTS for 1965-67

Submitted herewith are summaries of the proposed budgets and appropriations needed by Iowa State University of Science and Technology for the biennium 1965-67. These summaries indicate the needs for operating funds (Salaries, Support, Maintenance, Miscellaneous and Equipment) for the General University, the Agricultural and Home Economics Experiment Station and the Cooperative Extension Service in Agriculture and Home Economics, as well as the requests for Repairs, Replacements and Alterations and for Capital Improvements.

The principles and form used in the preparation of the operating requests follow the uniform pattern adopted by agreement between the three institutions of higher education and the Finance Committee. The computations supporting these summaries are not set out in detail herein but are available for examination.

The <u>Starting Base</u> represents the current level of operation as established by the budgets for 1964-65, approved by the State Board of Regents on June 19, 1964. The use of the 1964-65 budget as the starting base provides a realistic point of departure because it is based on the latest schedule of salaries, general expense, and other cost estimates and the enrollment to be served. It also reflects the increase in income from other than State funds which will be available from the student fee increases that became effective in September, 1964.

Additions to the starting base are the dollars needed to cover increased operating costs for the biennium 1965-67. By combining the starting base and the additions to the base, a proposed budget for each year of the coming biennium is determined.

Part of the proposed budget will be met from funds other than state appropriations -- student fees, sales, endowment interest, federal funds, overhead charges to research contracts, etc. The total of these estimated receipts is deducted from the proposed budget, and the remainder is the amount which is requested of the General Assembly. Social Security tax increase for non-academic staff is included.

<u>General expense increase</u> - The request for increased general expense funds is based upon a 2.8% cost increase per year beginning July 1, 1965. This is based upon a cost index and projection developed by statistical methods which gives proper weightings to the various types of items purchased from General Expense funds by a University.

Equipment funds - The request for additional equipment funds is based upon the replacement of the current inventory of equipment using a fifteen-year life (7% of inventory value per year).

Library Books - The increase requested for library books is based upon an administrative review of recommendations of the Librarian and his staff. Among the institutions in the ll-state area Iowa State stood no better than eighth in the number of acquisitions in 1963-64. For many years the book budget has been held low for the reason that space was not available for the additional volumes. Since the completion of the Library Addition in 1961 an effort has been made to step up the rate of acquisition of new books.

Enrollment increase - The cost of providing for increased enrollment in the coming biennium has been computed by a "unit cost" formula. Under a directive from the Board of Regents, a joint committee of representatives of the three institutions of higher education spent more than two years developing a uniform method of cost calculation. The committee arrived at unit costs per full-time equivalent student at the respective institutions for each of five levels of instruction (lower, upper, Masters, Advanced Graduate, and Professional) for fiscal year 1962-63.

These unit costs were then projected to 1963-64 based on the comparative operating costs and enrollments of the two years. Estimates of enrollment increases for 1965-66 and 1966-67 were developed by

The proposed additions to the base are as follows:

Salary increases for academic staff (teaching, research, administrative and professional) - For some years it has been the goal of the Regents' institutions to reach a salary level for academic staff which is competitive among similar institutions in an ll-state midwestern area (Michigan, Indiana, Illinois, Wisconsin, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Missouri and Iowa). A fair competitive salary position is considered by the Board to be equivalent to third place among this group of institutions. For Iowa State to have reached third place as of 1963-64 would have required an average salary increase of 5.9%. To maintain this position through 1964-65 would require an additional 3.4%, however, since the 1964-65 budget is used as the starting base, a deduction is made at this point of the amount budgeted for salary increases granted in 1964-65. It is anticipated that to maintain third place through 1965-66 will require a 7.3% increase over 1964-65; and for 1966-67, and additional 3.4% over 1965-66. The cost of increased Social Security tax is also included.

<u>Salary and wage increases</u> - <u>non-academic staff</u> (<u>clerical</u>, <u>maintenance</u>, <u>service</u>) - To maintain competitive salary and wage scales will require a weighted average increase of 10.5% for the first year of the biennium and an additional 5.25% the second year. The the Registrars. The 1963-64 unit costs at each level multiplied by the anticipated increase in enrollment at the corresponding level produces figures which represent the best estimate of the cost of accommodating the additional students expected during the coming biennium.

Since the calculations are based on 1963-64 costs, they are thought to be well on the conservative side when used for the 1965-66 and 1966-67 projections. Details of unit costs, the estimated enrollments at the various levels and the calculations are set out in the computation section of the legislative workbook for 1965-67.

<u>Cost of Expanded Summer Session (year round</u> <u>operation</u>) - It is anticipated that sharply increased enrollments will occur in the summer sessions as a result of the emphasis being given to year-round operation. Since the Enrollment Increase computation is based on "full-time equivalent" students, the normal expense of increased summer enrollment would be met by funds provided under the Enrollment Increase formula. However, the expansion of summer quarter offerings to provide complete and accelerated instructural programs involves an additional cost of operation. Under the present plan to offer more complete summer programs, many more courses must be offered, which cannot be withdrawn because of low enrollment. Firm commitments for teaching faculty must be made (and kept) well in advance of summer because of the many other teaching, research and industrial opportunities available to the staff.

These changes in summer operation cause, in some cases, unduly high costs per student for some of the course offerings in which there is small enrollment. The amount requested for the cost of the expanded summer session has been based upon an estimate prepared after consultation with the Registrar and a review of the probable increase in the number of sections and course offerings.

<u>Strengthening and improving programs</u> - The several departments of a university have two important not unrelated functions, namely teaching and research. The strength of a department is measured by the productivity and quality of the research carried on by its staff members as well as by the success attained in the teaching of students. Satisfactory teaching implies not only the conveying of factual information to the student but also the developing of a sincere interest in learning and a stimulating of thought processes to remain a part of the student throughout his entire career.

During the past several years in many areas of study, the supply of trained university faculty members has not kept up with the demands of continuously expanding enrollments. Consequently faculty salaries have increased and universities with limited budgets have had to restrict enrollments or adopt emergency measures to provide instruction. An inescapable consequence has been the large lecture section and/or closed-circuit television instruction accompanied by very extensive use of graduate assistants.

The need for additional funds to augment staffs

and strengthen departmental programs is growing extremely critical. In many areas staff members are seriously in need of relief from heavy teaching loads and students also are clamoring for more seasoned and experienced teachers. The use of graduate assistants has expanded to such an extent that in some departments the available senior staff is no longer able to provide adequate instruction in advanced courses and to direct graduate students in research. Equilibrium can be regained only by the addition of senior staff members.

Certain areas of science and technology are also developing and expanding at the present time. To maintain a strong position in the academic world, we cannot afford to ignore such developments. We need to stay abreast of the times and to continuously build and support instructional and research activities in new areas pertinent to our assigned fields of activity.

The detailed needs for strengthening and improving programs were presented to the officials of the University by the Deans of the respective Colleges. After careful study and evaluation, the President presents herewith only those needs which, in his judgment, were rated most critical. Many worthy proposals had to be eliminated and the amount finally requested has been reduced significantly below that considered highly necessary by the several colleges in the University.

<u>New Programs</u> - No support is being requested for new programs.

<u>Capital</u> - A summary listing of the projects included in the request for Capital Improvements and for Special Repairs, Replacements and Alterations is included herein.

REPAIRS, R	EPLACEMENTS	AND AL	TERATIONS
------------	-------------	--------	-----------

Appropriations for this purpose simply have not kept up with costs in the building construction industry. In January, 1952 when the Engineering News-Record Building Cost Index stood at 406, we were receiving an annual appropriation of \$300,000. We now receive \$460,000 annually, or an increase over 1952 of about 53%. The Building Cost Index has risen, however, to approximately 608, and it is estimated that it will reach 636 by January 1, 1966, an increase of almost 57%. This indicates that we may expect these kinds of costs in the coming biennium to be 57% higher than in 1952 when we were receiving \$300,000 annually. In addition to the problem of increased costs, our educational plant has grown tremendously by the addition of buildings and other facilities which require repairs, and alterations. The book value of the educational plant has increased by 95% from June 30, 1951 to June 30, 1963. The square feet of the educational plant has expanded by 47% since 1951-52. The following calculation was used as the basis for requesting funds for Repairs, Replacements and Alterations:

Costs

FINANCIAL NEEDS

Presented to

STATE BOARD OF REGENTS

by

J. W. MAUCKER, President

for

BIENNIUM 1965-67

STATE COLLEGE OF IOWA

Financial Needs Presented to the State Board of Regents for Salaries, Support and Maintenance Needs; Repairs, Replacements and Alterations; and Capital Improvements for the 1965-67 Biennium

INTRODUCTION

The budget recommendations for the 1965-1967 biennium were made in accordance with the uniform policy agreed to by the administrative officials of the three institutions of higher education and the Finance Committee of the State Board of Regents. This policy uses as the base the operational budget for the 1964-1965 fiscal year. To this is added the funds needed for salary increments, for increased enrollment, for the strengthening of current programs, and for the increased expense of supplies, books, repairs, etc. From this total is subtracted the anticipated income which is materially larger than previously due primarily to the higher tuition and fees and the larger number of students. Funds for capital improvements needed in the next biennium are listed separately.

ENROLLMENT TRENDS

The college predictions of enrollment have proved to be quite conservative. We estimated that we would have 3,700 students in 1961 but the actual enrollment was 4,061; for 1962, our estimate was 4,000 and we had 4,572; for 1963 our prediction was 4,750 and the actual number was 5,147; and the estimate for September 1964 was 5,200 and the enrollment was 5,500. We know now that the 6,500 students we predicted by 1970 is far too low and that we will exceed that figure in 1966. By 1970, we now expect to have over 8,000 students.

The increased enrollment in colleges and universities is due to three primary factors.

- (1) There are many more college-age youth. The senior classes in Iowa high schools, (1965 graduates) average about 25% larger than in 1964.

For 1966-67

	Stude Increa		Cost pe Student		Funds <u>Needed</u>
FreshSoph.	728	х	\$ 709	=	\$ 516,152
JrSr.	342	Х	1,044	=	
Masters	128	Х	1,024	=	131,072
Advanced Graduate	22	Х	1,147	=	25,234
	1,220				\$1,029,506

Hence, the State College of Iowa requests \$1,566,339 (\$536,833 + \$1,029,506) additional funds to provide the staff and supplies for the 22% increase in enrollment that we expect during the 1965-67 biennium.

MEETING THE COMPETITION FOR STAFF

Competition for qualified staff becomes increasingly intense. Our first obligation is to hold the competent staff we have and this means keeping our salaries moving up. For the 1964-1965 school year, the State College of Iowa lost eleven Professional Staff Members to competing institutions. This is only about 4% of our faculty and, therefore, our loss has not reached alarming proportions as yet. However, it could easily do so if we fail to increase salaries sufficiently to meet our competition. We must also offer salaries sufficiently high to attract the calibre of new applicants that we need to maintain a strong college.

We know that the average salary paid by institutions of the former-teachers college type, in the eleven states nearest Iowa has been increasing at a rate averaging $5\frac{1}{2}$ % a year during the past several years and it is estimated that this will continue through the next biennium. To compete successfully it is felt that the State College of Iowa should pay its professional staff salaries equal to the average salaries paid by the better institutions of its type in the eleven-state area. As of September 1964, the average salary at the State College was \$540 or 6.1% below that paid by the third ranking institution in the eleven-state area. By the fall of 1965, our competitors will undoubtedly have increased salaries by at least 5% so by the first year of the new biennium, the college will need to raise salaries about 11% to be in line with our competition. An additional increment of approximately 5% will need to be made for the second year of the biennium. To make these increases, the State College of Iowa needs \$1,191,215 additional appropriations.

- (2) The percent of qualified high school graduates who desire to attend college continues to grow.
- (3) Students tend to stay in college longer due to the longer curricula, certification requirements, etc.

During the biennium 1965-1967, we anticipate that even with a tightened admissions policy, our enrollment will be increased by 1200 students or approximately 22%. From past experience, we also are able to make a fairly accurate estimate as to the classification of these additional students, and by knowing the current cost of instruction for each category of students, we prepare our estimate of the funds needed to take care of these increased numbers. This is shown in the table below:

For 1965-66

	Stude Increa		Cost per Student		Funds <u>Needed</u>	
FreshSoph.	376	х	\$ 709	=	\$266,584	
JrSr.	184	х	1,044	=		
Masters	64	Х	1,024	=		
Advanced Graduate	$\frac{11}{635}$	х	1,147	=		

There is also the need for additional funds for raising the salaries of our non-academic staff members (clerical, maintenance, etc.). The college has to pay salaries sufficiently high to compete with the salaries paid by businesses and industries in the Waterloo-Cedar Falls area. Increased appropriations are also needed for supplies, books, equipment, and the expanded summer session. The additional funds requested for these purposes amount to \$431,889. This will provide: (1) a 5% salary increment for 1965-1966 for the clerical staff and for student employees and an 8% increase for the physical plant staff, (2) an additional 4% for 1966-1967 for the non-academic employees, and (3) about 2.8% more for each year of the

biennium for general supplies.

An additional \$70,000 for the biennium for library materials and \$40,000 for the expanded summer session is also needed.

STRENGTHENING THE PRESENT PROGRAM

In providing for the increased number of students, we must not lessen our efforts to improve the instructional program. We must continue to strive to do a better job while expanding to take care of the sizeable enrollment increases.

Six years ago we began a program to provide more challenging experiences for the more gifted student. The college needs an additional \$45,000 to provide a modest expansion of this program, particularly to provide for supervision of independent study and to offer special courses for honor students at the junior and senior level.

To enable the college to permit a small number of staff members to devote full-time for a semester or a year to college-approved research an additional \$70,000 is requested.

The college needs special equipment for business education, foreign languages, science, speech correction and other areas and an additional \$100,000 is requested for this purpose.

To secure staff for certain specialized institutional and administrative positions an additional \$160,000 is needed. And to provide for a modest expansion of our services to the public schools an increase of \$70,000 is requested.

The college would like to hook-up the closedcircuit TV operation in the Auditorium Building with the Price Laboratory School. This would enable the students in the professional education classes to view instructional procedures and reduce the congestion in the Laboratory School. §50,000 is needed for this installation.

A major need is for funds to be raised by the

REPAIRS, REPLACEMENTS, AND ALTERATIONS

Significantly larger appropriations for repairs, replacements and alterations are requested. More buildings and greater usage of all buildings simply means more funds are needed for repairs and replacement. Furthermore, the cost of such things has been increasing every biennium. The Sixtieth General Assembly appropriated \$350,000 for this category of expenditures and this has not proved adequate. For these reasons, the college requests an additional \$269,000 for the next biennium.

CAPITAL IMPROVEMENTS

Many of the instructional and administrative buildings at SCI were constructed before World War I. The appropriations from 1921 to 1945 averaged less than \$32,000 a year. Between 1946 and 1959 two badly needed instructional buildings were constructed (The Arts and Industries Building and the Price Laboratory School) and beginning in 1959 several major buildings have been built: The Student Health Service, the Music Building, the Library, and additions at the Arts and Industries Building and to the Heating Plant. The first unit of a new administration building is nearing completion and plans are being drawn for the first unit of a new Science Building and a Physical Plant Shops Building for which funds were appropriated in 1963.

The per capita expenditure by the state of Iowa for capital improvements in the state colleges and two universities since 1945 has increased from \$6.77 in 1958, to \$12.40 in 1961, and to \$25.50 in 1964. However, during the same period the per capita appropriations in the other states in the eleven-state area nearest Iowa have increased even more rapidly and our relative position is near the bottom.

The State College of Iowa requests an appropriation of \$4,276,000 for capital improvements for the 1965-1967 biennium. This will provide funds for the equipment needed for new buildings for which funds were appropriated in 1963, Unit I of a new Education and Psychology Building, Unit II of a new Science Building, expansion of the Heating Plant and Modernization of the heat distribution system, purchase of additional land, and a number of special projects for repair or alteration of the existing facilities. The specific requests for each of the above projects is shown below:

college as the institutional share of the loan funds obtained from the federal government under the National Defense for Education Act. For each dollar the college makes available for loans to students under this program, the federal government puts in \$9. The college needs \$70,500 for the biennium for this purpose.

NEW PROGRAMS

Approval of two new programs is requested.

(1) Teachers for Technical Institutes - \$100,000 needed. To help fill the gap in opportunities for Iowans to obtain training as technicians for expanding industries in the state, SCI will undertake to develop two-year programs related to the long-established offerings and functions of the college in such fields as industrial arts and business education. These programs would help meet the large anticipated demand for teachers prepared to work in similar Technical Institute programs throughout Iowa.

(2) Northeast Iowa Development - \$50,000 needed. The sum requested would enable SCI to augment studies being made by students and staff (on a voluntary basis, in connection with regular class work), of the resources of Northeast Iowa, that they may be more effectively utilized. a modest expenditure would provide fuller information about the region and an improved learning experience for students. Equipment for Projects under Construction in 1963-65 = \$279,000

Equipment for Unit I of the Science Building will be needed during the biennium 1965-67 when the building is to be ready for equipment installation. In addition, it has been necessary, with the Board of Regent's approval, to utilize \$14,500 of the equipment funds originally allotted by the Board for each of two other projects to meet the cost of the Administration Building for which funds had been appropriated by the 59th General Assembly. The amounts needed in the 1965 -67 biennium for equipment for these projects are as follows:

a.	Science Building, Unit I	1000 000	
-		\$250,000	
b.	Physical Plant Shops	14,500	
с.	Remodel Old Library	_14,500	
	Amount requested for		
	1965-67		\$279,000

 Education and Psychology Building, Unit I (without equipment) \$1,250,000

The Department of Education and Psychology is one

of the largest in the institution, offering courses taken by all students preparing to be teachers; it carries the heaviest load of graduate work.

The work of the department is now scattered among four of the oldest buildings on the campus. Additional space is badly needed because the department is growing rapidly; staff offices and facilities of a specialized nature, such as clinics and laboratories, are grossly inadequate. In some instances, four or five instructors share office space in a partially partitioned classroom, poor in ventilation and providing little privacy for the counseling of students. A new building with modern equipment would enable the department to render much more effective service.

A first unit of the building would probably include 15 to 18 classrooms of varying sizes, a lecture hall-auditorium that could be divided into three lecture units for large classes, psychology laboratories, a materials center and demonstration suites for guidance and counseling, a school administration laboratory and a statistical laboratory, an educational clinic, staff offices, a staff study room and lounge, and a graduate student center.

3. Science Building - Unit II (without equipment) \$897,000

In 1963, \$1,775,000 was requested for Unit I of a Science Building, the first new building to be built on the SCI campus in the fast-moving field of science since prior to World War I. From the appropriation of the 60th General Assembly only \$1,294,000 could be allotted to this project and subsequent planning indicates that this will fall short of the present needs, providing for only part of the work in biology and chemistry (none in physics) and leaving both of those programs split among several buildings in an awkward and inefficient manner. Even the "temporary" space in the old infirmary will have to be continued in use.

If money could be obtained in the 1965-67 biennium for a second unit, the programs in biology and chemistry could be fully housed in the new structure, freeing present space for other purposes. cost of \$350,000.

 Industrial Arts - Technical Institute, Unit I (with equipment)

\$250,000

The need for Technical Institute programs to fill a gap in the opportunities provided for Iowa youth for post-high school education is gaining increasing recognition throughout the state as Iowans find themselves in transition from a heavily agricultural economy to one combining agriculture, commerce and industry. The Regents institutions agreed several years ago to evaluate carefully the pilot program at Ames and to utilize the resources of all three Regents institutions of higher education if the experiment proved successful.

The State College of Iowa is prepared, if authorized by the Board of Regents and supported by the legislature, to establish a Technical Institute Program, beginning in the field of Automotive and Diesel Engine Technology. The purpose would be to train technicians in this specific field and to prepare teachers and supervisors to staff Technical Institutes throughout the state.

To facilitate such a program funds are requested for the first unit of a building which would provide 10,000 square feet of shops and laboratories large enough for efficient use. Space in the present Industrial Arts building is not adequate for the program expansion contemplated.

- (7) Special RR&A, including special campus development \$300,000
 - Storm sewer development - South Campus \$ 68,000
 - Special campus development - the development of new portions of the campus is changing pedestrian and vehicular traffic patterns, necessitating revamping of walks, drives.

 Heating plant - new steam generator and addition to building to house it

\$850,000

(8)

After reviewing our estimated future heating loans and consulting with the Brown Engineering Company, Des Moines, it is deemed necessary that we should request a new 100,000 lb. per hour steam generator to be housed in an addition to the Power Plant, west of the present building. Auxiliary equipment would include a stoker, necessary controls, soot blowers, fans, heat recovery units, extensions of the ash handling and coal handling equipment and a boiler feed pump.

 Heat distribution system additions and improvements \$350,000

A survey of the heat distribution system by Brown Engineering Company of Des Moines in June, 1963, indicated a need for extensive investment in new heat lines and replacement of some of the older lines as the campus expands. Some of this work (lines to the Administration building and two units of Regents Halls) is being completed during the 1963-65 biennium. Steam lines to additional residence halls, the Science building, the Education and Psychology building and replacement of a portion of the main lines from the steam plant to the south side of 27th Street should be completed during the 1965-67 biennium - at an estimated

	revamping of walks, drives, approaches and entrances. Since much of this work is not part of any specific building projectand there- fore is not included in the requests for individual buildings this request is made for such develop-	
	ment over the next four years.	100,000
3.	Improvements to electric distribution system	40,000
4.	Women's Gym - renew gym floors and improve lighting	25,000
5.	Power Plant modifications to improve efficiency and permit year-round operation	20,000
6.	West campus - grounds and Physical Plant facilities development	47,000
	Total	\$300,000
Lan	d purchase	\$100,000

STATE COLLEGE OF IOWA - FINANCIAL NEEDS - 1965-67

There are several parcels of land, including some just west of Highway #57, which the college should purchase whenever they come on the market at reasonable prices. Funds were appropriated for this purpose by the 58th General Assembly in the amount of \$200,000, of

which \$144,100 was used to buy land and \$55,900 was reverted to the state on June 30, 1963. It is of crucial importance to the long-range development of the college that funds for land purchases be available when strategically located parcels come on the market.

SUMMARY OF FINANCIAL NEEDS FOR 1965-67 BIENNIUM as presented to the Regents by President J. W. Maucker

			1965-66	1966-67

III. CAPITAL IMPROVEMENTS	
A. Physical Education Building Addition	

Estimated Equipment Costs Total Estimated Costs Throughout the United States wrestling, swimming, track and field, and bowling are recognized as the most basic competitive sports for visually-impaired students. Bowling has an important carry-over value because it is one of the most popular recreational activities for blind adults.

The addition of bowling to our physical education and recreational programs would pay valuable dividends in terms of developing rhythm, balance, poise and in providing pleasure and self-confidence for our students.

IV. SPECIAL RR&A PROJECT

A. Main Building Special Repairs

Estimated Building Costs

Estimated Cost

The Main Building was completed in 1862. Although it is basically in good condition, special repairs are required which are too large to be financed with the regular RR&A funds. These repairs include:

- 1. Renovation of toilet rooms
- Replacement of various plumbing fixtures and service lines

IOWA SCHOOL FOR THE DEAF - FINANCIAL NEEDS - 1965-67

CAPITAL IMPROVEMENTS

SUPPLEMENT TO FUNDS APPROPRIATED BY THE GOTH G.A.

Additional funds are needed for three capital projects, as a supplement to money previously appropriated by the 60th G.A. Funds received proved far short of the amount actually needed when bids were tabulated.

When estimates were made for the projects listed, there had been no plans or specifications drawn and no special outside consultation for an estimate of cost. Advance planning money was not available.

The same requests were included in the askings for several years and no increase was made for higher labor costs, for additional costs of materials or for architect fees.

After appropriations were received, plans were drawn and bids were taken. The bids were far in excess of the appropriations.

The following report shows the actual appropriation received from the 60th G.A., and the estimate of cost established by the architect, based upon the bids received on each improvement, projected into the 1965-1967 biennium.

PROPOSED CAPITAL PROJECTS	Appropriation received	Estimate of cost	Supplemental funds needed for project
Main Administration Building Dormitory rooms	\$39,480.00	\$ 67,200.00	\$ 27,720.00
Showers and Toilets	13,200.00	43,187.00	29,987.00
High School Gym Remodel dressing rooms	25,000.00	86,933.00	61,933.00
Miscellaneous funds (No bids tak	(en)		
Fire exits	2,500.00	2,500.00	-
Softener tank	2,700.00	2,700.00	
Total	\$82,880.00	\$202,520.00	\$119,640.00
POWERHOUSE REPLACEMENT			\$459,810.00

\$119,640.00

31

This request is based upon a study made by Brown Engineering of Des Moines, Iowa, as well as reports made by the State Department of Labor, the Boiler Inspector and Daly Company of Omaha, Nebraska.

The Brown Engineering report recommends that the entire Powerplant and its equipment be replaced at a total cost of \$459,810.00.

The report confirms the fact that our powerplant no longer can meet the requirements of the institution and is past the point of good repair. It is obsolete and antiquated, in some cases dangerous to operate.

SEWAGE TREATMENT

\$ 60,415.00

The State Department of Health recommended that the sewage at the school be properly treated and not dumped in a raw state into Mosquito Creek.

Henningson, Durham & Richardson, Engineers and Consultants from Omaha, Nebraska, was hired to make a study. The study dated March, 1964 recommended that a gravity connection be made to an existing corporation at a total cost of \$48,000.00 plus connection fee of \$12,415.00 or a total cost of \$60,415.00.

If a Federal Grant is received a reduction could be made in this total of \$14,400.00.

If the connection is made for sewage treatment an annual operating cost of approximately \$3,970.00 will be needed.

CAPITAL IMPROVEMENTS (Cont'd.)

MAIN BUILDING REMODELING OF FOOD SERVICE DEPARTMENT

\$175,000.00

For some years, the need for a complete change in the food service department of our school has held a position of high priority.

The proposed change will centralize, consolidate and modernize the kitchen, the bakery, food storage and dining rooms.

A report was made by the Director of Residence from the University at Ames in April, 1960 in which he concluded that the present arrangement was extremely inefficient, that the present setup does not allow for proper sanitary conditions and that it would be unwise to spend money in an attempt to remodel the present arrangement.

In May, 1964 a report was made by Wetherell, Harrison & Wagner, Architects from Des Moines, Iowa, who recommended that the food service department be renovated and after some study estimated the total cost at \$175,000.00. This report was given to the Board during the May meeting 1964.

	Descript	tion of above		
Ι.	Addition to Employee Apartment Building		+ nn n/n	\$130,000
	Appropriated by 60th G.A. Less transfer to R.R.&A.		\$ 92,960 12,500	80,460
	Balance needed			\$ 49,540
	This addition, to house twelve married couples,	, is to be		

Be ft. long x 25 ft. wide with 10 ft. ceiling. Included in this project are two entrance stairways size 9 ft. 8" x 8 ft. each to serve three floors or six apartments. Each apartment to have a living room approximately $12\frac{1}{2}$ ft. x 16 ft., kitchenette 7 x 6 ft., bedroom 9 ft. x 13 ft., dressing room 9 ft. x 6 ft. and bathroom 9 ft. x 6 ft. The present apartment building was completed in June of 1950 and houses 24 married couples and 24 single employees. The addition is planned for housing some of the married couples now quartered in the basements of Hospital building and Nurses Home.

II. Addition to Sewage Disposal Plant

\$107,000

35

Recent survey by Powers and Associates, engineering firm, reveals that the Plant is not adequate to care for increased load. Increases due to installation of garbage disposers and enlargement of S.U.I. Animal quarters.

III. General Stores Building

Space occupied by general stores now includes basements of two buildings and a part of the first floor of an employee dormitory. To house all supplies under one roof will require a building approximately 130 ft. long by 60 ft. wide and 20 ft. high with a ground floor and first floor, freight elevator, refrigeration rooms, storage racks and loading docks. Removal of stores from the Employee Building will permit transfer of male employees from third floor attic in the Main Building and Nurses Home basement. \$130,000

SECTION II

The financial requirements of the State Board of Regents as presented to the 61st General Assembly for the Biennium 1965-67

State Board of Regents, Central Office State University of Iowa Iowa State University of Science and Technology State College of Iowa

Iowa Braille and Sight Saving School Iowa School for the Deaf State Sanatorium

STATE BOARD OF REGENTS

BUDGETS AND FINANCIAL REQUIREMENTS For the Biennium 1965-67

The following pages show in considerable detail the requests of the State Board of Regents for legislative appropriations by the 61st General Assembly.

For a number of years the Board has asked the institutions to use a formula to develop their needs. This formula has become known as the "Toledo Formula" and got its name because the institutional executives and the Finance Committee held their meetings in Toledo, Iowa, to develop the requests.

The formula approach is a simple but effective guide for the institutions to follow and insures a uniform and objective guide to the preparation of the biennial budgets.

Salaries, Support, Maintenance, Miscellaneous and Equipment (SSMM&E)

The Toledo Formula is simply this:

Ι.	The Starting Base
	- plus -
II.	Additions
	- equal -
III.	Total Budgets for 1965-67
	- less -
IV.	Estimated Other Income
	- leaves -
۷.	State Appropriation Required 1965-67

Before the institutional executives and the Finance Committee start their work, the Board determines certain guide lines to be followed; such as the level of academic and professional salaries to be sought for the 1965-67 biennium in order to be able to get and keep top level staff, salary levels for nonacademic staff, the methods for computing general expense increases, book expense increase, enrollment increases, and development of increases for improving programs. showing the amount of the increased funds needed for this purpose is shown in each institutional section.

Non-Academic and Service Personnel. Salary increases in this category are based on a comparison with salaries paid in the local area. The increases are required to enable the institutions to employ competent staff by paying salaries competitive with the local wage scales.

General Expense Increase. General Expense is the account used for the purchase of expendable materials, supplies and services. The increase in costs for such items is estimated to be 2.8% per year.

Equipment Expense Increase. Increase for equipment purchases is very slight - only \$35,700 for the biennium.

Library Book Increase. Library books are among the most vital tools of an educational institution. Increased expenditures must be made to keep new and modern resource materials available for students, teachers, and researchers. The librarians, whose responsibility it is to see that the institution is adequately supplied with these resource materials, make the recommendation for the increased funds needed.

Enrollment Increase. During the 1965-67 biennium, the three state institutions of higher education - State University of Iowa, Iowa City; Iowa State University of Science and Technology, Ames; and the State College of Iowa, Cedar Falls - expect to have 5150 more students than they will have during the 1964-65 year. This huge increase in enrollment for 1965-67 was predicted years ago

- I. <u>Starting Base</u> This figure has been agreed upon by the State Comptroller and the Board of Regents. It represents the current level of operations at each of the institutions and is derived from the 1964-65 budgets.
- II. <u>Additions</u> to the starting base are computed in accordance with the principles of the "Toledo Formula."

<u>Academic Salary Increases</u> - include Professional, Teaching, Administrative and Research Personnel. Attracting and keeping qualified staff is vital to maintaining a top quality institution. To do this requires that salaries paid in the Iowa institutions be competitive with those paid in comparable institutions in the 11-state midwestern area (Michigan, Indiana, Illinois, Wisconsin, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Missouri and Iowa).

Salaries paid to professors, associate professors, assistant professors and instructors in the various colleges of the Universities are secured and ranked from high to low. The Board of Regents feels it can be competitive if its salary level can be at a point midway in the upper half of the ranking. The detail of the computation when the birth rate in Iowa and the nation jumped drastically upward.

In order to arrive at the increased costs to handle the additional students, the results of the two and a half year study on Unit Costs were applied. The unit cost for each student at the lower level, upper level, masters, advanced, graduate and professional were multiplied by the numbers of new students in each level. This produced the increase needed.

Summer Session (Year-Round Operation). The summer session programs were expanded two years ago to provide courses for entering freshmen, thus making it possible to complete the college course in three calendar years instead of the traditional four. As this program grows, additional funds are necessary.

Strengthening Programs and New Programs. To keep pace with the constant development of new knowledge, educational programs must be constantly improved. Just to accomplish a part of this upgrading requires about $5\frac{1}{2}$ million dollars for the biennium.

III. Total Budgets for 1965-67. The total addi-

tions added to the starting base produce the budgets for the 1965-67 biennium.

- IV. Estimated Other Income. Other Income is that money received by the institutions other than appropriations for Salaries, Support, Maintenance, Miscellaneous and Equipment. It comes from student fees, overhead on government contracts, special fees, sales, endowment interest, federal funds, etc. The amount estimated for the biennium is subtracted from the total budget, leaving the balance to be appropriated by the General Assembly.
- V. <u>State Appropriation Required 1965-67</u>. The summary sheet shows biennial totals. The Board of Regents again is recommending to the Legislature that the appropriations be made separately for each year of the biennium, the first year being smaller than the second. This detail may be found in each institutional section.

Repairs, Replacements and Alterations (RR&A). This fund is appropriated to protect the tremendous capital investment the State has on the campuses of the six institutions governed by the Board of Regents. Without funds for this purpose, buildings, utilities and campuses would soon deteriorate to complete uselessness. The routine recurring RR&A needs were calculated on the Building Cost Index and adjusted to account for the buildings that have been added on the various campuses.

Capital Improvements. The new buildings, utilities improvements, and other major projects needed at the Regents institutions are listed following the "Summary of SSMM&E and RR&A Needs for the Biennium 1965-67" in this section of the Report. The explanation for the Capital Improvements will be found in the detail for each institution. Inadequate appropriations for the 34 years from 1925 to 1959 caused a tremendous backlog of building needs. The total appropriations for that 34 years were \$28,329,302.00 or about \$833,000.00 per year. The 58th General Assembly appropriated \$16,412,330.00, the 59th General Assembly \$20,947,440.00, and the 60th General Assembly \$16,000,000. The last three appropriations by the 58th, 59th and 60th General Assemblies helped a great deal to get the building program under way. The 61st General Assembly is again being asked to make a substantial effort to keep the building programs moving forward.

The office is located in the State Office Building, Des Moines, Iowa. The office staff consists of a Finance Committee of three full time members, a State Field Agent, and five secretaries and stenographers. The total support for the office is from state appropriations. For their services, the nine Board members receive a per diem of \$20.00, plus expenses.

<u>The Finance Committee</u>. When the State Board of Regents (then State Board of Education) was created by the Legislature in 1909 a Finance Committee was also created, to be appointed by the Board. Certain responsibilities for the Finance Committee were prescribed by the statutes, others are delegated to it by the Board. Today, a more appropriate title would be "Executive Committee." A part of the responsibilities of the Finance Committee are shown here:

- A. The Finance Committee shall be appointed by the State Board of Regents from outside its membership for three-year terms. One member shall be designated as Chairman of the committee and another member shall be designated as Secretary. The Secretary of the committee shall serve also as Secretary of the Board of Regents.
- B. The statutory powers and duties of the Finance Committee are as follows:
 - May invest funds belonging to the institutions under the control of the State Board of Regents, subject to the regulations contained in section 262.14 of the 1958 Code.
 - To have charge of the foreclosure of all mortgages and of all collections from delinquent debtors of the institutions under the control of the Board of Regents.
 - To release mortgages in the manner provided in section 262.16 of the Code.
 - To visit each of the institutions of higher education under the control of the

STATE BOARD OF REGENTS

Central Office

The State Board of Regent's governs the following state-supported institutions:

State University of Iowa Iowa State University of Science	Iowa City
& Technology	Ames
State College of Iowa	Cedar Falls
Iowa Braille and Sight Saving	
School	Vinton
Iowa School for the Deaf	Council Bluffs
State Sanatorium	Oakdale

State Board of Regents once each month for the purpose of transacting any business that may properly come before it, and the performance of its duties.

- 5. To make such investigations and reports and perform such ministerial duties as the Board by resolution may direct, and make such recommendations to the Board as it may deem proper.
- C. Delegated powers of the Finance Committee include, but are not limited to, the following:
 - Authority to accept gifts and grants to the institutions.
 - Authority to approve rates for patients at the University Hospitals.
 - Authority to approve contracts for the purchase of utilities.
 - 4. Authority to secure bids on insurance.
 - 5. Authority to secure bids on coal.
 - Authority to approve contracts for special services, excluding teacher training contracts, and fire protection contracts.

- Authority to approve repair, replacement and alterations projects costing less than \$10,000.
- Authority to negotiate financing arrangements for capital improvements projects, other than appropriations, as directed by the State Board of Regents.
- 9. Authority to approve final plans and specifications for capital improvement projects unless they are substantially different from the preliminary plans and specifications as approved by the Board, in which case the final plans and specifications will be submitted for Board approval.
- Authority to advertise for bids and public hearings.
- Authority to hold public hearings, receive, open and analyze bids.
- Recommend award of contracts, or rejection of bids.
- Recommend alternative procedures if bids are rejected.

- 14. Designate who shall act as clerk of the works on capital improvement projects after consultation with institution authorities and architects.
- 15. Make all reports and secure all approvals as required by other governmental agencies.
- 16. Act on change orders as recommended by architects and the institutions, provided they are within the total final budget approved by the Board and do not exceed \$10,000.00 each.
- Recommend to the Board acceptance of capital improvement projects and payments to contractors.
- 18. Record in the minutes of the Finance Committee all actions taken by that Committee relating to capital improvements.
- Authority to make minor changes in the institution budgets.

The proposed budget for the Central Office for the 1965-67 biennium follows this introduction.

LEGISLATIVE REQUEST FOR REPAIRS, REPLACEMENTS & ALTERATIONS

1965-67

In addition to funds appropriated for Salaries, Support, Maintenance, and Miscellaneous, the General Assembly has provided, each session, funds for Repairs, Replacements and Alterations. In the past, the request has been submitted in two parts: (1) Routine Repairs, Replacements and Alterations; and (2) Special Repairs, Replacements and Alterations. For the past several sessions the General Assembly has considered the latter with the Capital Appropriation bill. The State Board of Regents has therefore directed us to include in our request for operating funds only the Routine Repairs, Replacements and Alterations and to include in our Capital Request the Special Projects in the Repairs, Replacements and Alterations category.

ROUTINE REPAIRS, REPLACEMENTS & ALTERATIONS

Through the years 1952 to 1963, appropriations for this purpose did not keep up with rising costs in the building construction industry. In January, 1952, when the Engineering News-Record Building Cost Index stood at 406, we were receiving an annual appropriation of \$300,000. We now receive \$460,000 annually, or an increase over 1952 of about 53%. The Building Cost Index has risen, however, to approximately 614 (51%) or approximately the same percentage. It is estimated that it will reach 636 by January 1, 1966. This indicates that we may expect costs in 1965-67 to be 57% to 62% higher than in 1952 when we were receiving \$300,000 per year. In addition to the problem of increased costs, our educational plant has grown by the addition of buildings and other facilities requiring repairs and maintenance. Some additional funds should also be provided because of the increase in the number of properties to be maintained. It was the judgment of the Board of Regents that the request for Routine Repairs, Replacements and Alterations be set at \$968,800 for the biennium 1965-67, an increase over the present appropriation of 5.3%.

Proposed appropriation for Repairs, Replacements and Alterations, annually	\$	484,400
Present Appropriation, annually	-	460,000
Annual increase needed	\$	24,400

Estimated Equipment Costs		0		0		0		0					17,000.00

Throughout the United States wrestling, swimming, track and field, and bowling are recognized as the most basic competitive sports for visually-impaired students. Bowling has an important carry-over value because it is one of the most popular recreational activities for blind adults.

The addition of bowling to our physical education and recreational programs would pay valuable dividends in terms of developing rhythm, balance, poise and in providing pleasure and self-confidence for our students.

IV. Special RR&A Project

A. Main Building Special Repairs

Estimated Cost

The Main Building was completed in 1862. Although it is basically in good condition, special repairs are required which are too large to be financed with the regular RR&A funds. These repairs include:

- 1. Renovation of toilet rooms
- 2. Replacement of various plumbing fixtures and

 Sewage Treatment Facility Improvements

\$107,000

Description of above

I. Sewage Treatment Facility Improvements

\$107,000

Recent survey by Powers and Associates, engineering firm, reveals that the Plant is not adequate to care for increased load. Increases due to installation of garbage disposers and enlargement of S.U.I. Animal quarters. Estimated cost of \$77,000.00 to remodel and enlarge present Plant. Estimated cost of \$107,000.00 for sewer line and connection to Coralville - Iowa City Sewerage System.

AID TO DEAF

The 37th General Assembly that convened in January, 1917, enacted a law authorizing school corporations to provide education for deaf children. (See Chapter 295, 1958 Code of Iowa. That chapter has been in effect continuously since July 1, 1917.)

The following report contains the names of the cities that maintained day schools for deaf children during the school years 1962-1963 and 1963-1964 respectively, the number of children enrolled in each, and the amount of state aid:

	1962-	1963		1963-

and that the income therefrom, with the exception of the amount necessary to keep the graves of the testatrix and her family in good condition, be used "toward the musical education of a worthy blind boy who shall have completed with honor all the course provided and furnished by the State in the particular or specific musical subject which said blind boy shall have chosen for his vocation. It being my intention that said fund shall be used as far as possible to enable some worthy blind boy who, but for such bequest, would be unable to pursue his course further than is provided by the State of Iowa, to procure such additional musical education as in the judgement of the Board of Trustees herein created shall be necessary to properly fit him for such vocation.

"The details as to the manner by which the beneficiary of the said fund is to be determined and the method by which the musical education is to be obtained, is to be left to the discretion of my Trustees and their successors and the Superintendent of the College for the Blind or the majority of them."

FRANK SAMUEL BEATTY AND WILLIAM J. BEATTY FUND

For the Use and Benefit of the Iowa School for the Deaf Council Bluffs, Iowa STATE BOARD OF REGENTS, TRUSTEE

Note: Flora M. Beatty, who died on December 24, 1943, made the following bequest:

"To the State of Iowa the sum of Two Thousand Five Hundred dollars to be known as the Frank Samuel Beatty and William J. Beatty Fund, to be used in equipping a hospital for use in connection with the School for the Deaf at Council Bluffs, Iowa. That it is also my will that an appropriate Memorial be erected at said hospital out of said fund in memory of Frank Samuel Beatty and William J. Beatty at said hospital." JOHN F. MURRAY ENDOWMENT FUND CONGER REYNOLDS ACHIEVEMENT AWARD TRUST

The John F. Murray Endowment Fund and the Conger Reynolds Achievement Award Trust Fund are trust funds given to the State Board of Regents for the use and benefit of the State University of Iowa.

On February 12-13, 1959, the Board of Regents took action transferring the custody of these funds from the Finance Committee to the Treasurer of the State University of Iowa. The financial reports of these funds will now appear in the University section of the Biennial Report instead of in the Board of Regents' section.

BUDGET CEILING DATA July 1, 1961 - June 30, 1963

The statutory ceiling is the amount set by the legislative appropriation plus the anticipated revenues from various sources. Because these statutory ceilings are approved by the legislature, any requests for decreases or increases must be approved by the Board of Regents and reported to the State Comptroller. While the appropriations are fixed, the revenues from various sources and thereby the expenditures within the institution are not. Therefore, the budget ceiling figures vary due to variations in enrollments, federal grants, fees from patients, overhead allowances on government contracts, sales of material and services, etc., and the resulting increases in cost of these revenues producing sources from the estimates originally made. The following table shows these changes.

State University of Iowa	Statutory Biennial Ceiling	Approved Increases	Approved New Ceiling	Actual Expenditures July 1, 1961 to June 30, 1963	Expenditures Authorized Over Under

STATE UNIVERSITY - REPORT OF PRESIDENT

Report of Virgil M. Hancher, President

Virgil M. Hancher

TO: The State Board of Regents

In compliance with the provisions of Section 262.24 of the Code of Iowa, I submit my "observations and recommendations" for the benefit of the State of Iowa. The financial requirements of the University for the years 1965-67 are submitted in Section II of this report.

Because this is the final year of my presidency, it seems appropri-

GROWTH IN SIZE

Growth can be measured in both size and scope. In terms of sheer size, the University's growth has been startling. When I took office in the fall of 1940, 6,667 students were enrolled on campus. In the fall of my final year, enrollment was 12,923, or almost two times greater. Except for the last decade or so, however, increases have not occurred in a steady progression. We have experienced large fluctuations, the first developing as students left for service during World War II only to return in the years immediately following the war on an unprecedented scale. Now the offspring of these returning veterans--products of the so-called "baby boom"--are reaching college age in numbers which will make postwar surges in enrollment seem meagre by comparison.

Not surprisingly, enrollment increases have been accompanied by growth in the physical dimensions of the University. Our original ten acres of ground in the mid-1800's had grown to some 428 acres by the time I took office. Now, with the acquisition of land to the west of Iowa City, the University comprises about 1,339 acres. This land should provide ample room for University expansion for at least a generation to come.

Similarly, we have experienced a substantial increase in capital construction. Without detailing all of the projects completed or begun during the past quarter-century, I might say that the results can be seen from the far western edge of the campus, where the Hawkeye apartment development for married students, rises, to the eastern edge, where the skeleton of a new Physics Research Center is rapidly going up. Among the projects paid for in whole or in part by state funds are new medical research and hospital facilities, buildings for pharmacy, chemistry, zoology, journalism, business administration, engineering, physics, and law, a centralized University library, and several other buildings for which funds have been authorized but on which work has yet to begin. In the area of self-financing buildings, we have added substantially to our dormitory system with the completion of Hawkeye and Parklawn Apartments, Burge Hall and its annex, Kate Daum House, and a major addition to Hillcrest, and more such buildings are in the planning stage. The Iowa Memorial Union has enjoyed one major addition, and three others are in progress.

With all this activity, I wish that I were in a position to report that our buildings needs are nearly satisfied. But even with the substantial appropriations of some \$23 million provided by the last three General Assemblies, supplemented by a number of federal matching grants, much remains to be done if we are to cope with the kind of growth which informed authorities are now forecasting.

A number of other comparisons indicative of the University's increase in size may be of interest. In 1940, we had a faculty of 316, including full-time instructors. By 1963, this number had grown to 770. In addition, we employed 974 part-time people in teaching and research assignments. The total number of employees in the University in 1940 was 2,399, which is in marked contrast to the 6,251 employees of the University in 1963-64. Of this number, slightly less than 1,700 were part-time faculty and staff.

ate to review some of the changes which have taken place both within and outside this institution during the past quarter century. In all this time, to be sure, the purposes of the University have not changed. They can be summed up, as before, in three functions: the transmission of knowledge, by teaching; the increase of knowledge, through research; and the interpretation of knowledge, through public service. But the dimensions in which the University must operate have been profoundly altered by events of far-reaching consequence occurring on a global scale. This is a far different world from the one we knew in 1940, and as an inevitable result, the University of Iowa is a far different university.

What are some of the differences? I am sure I need not belabor here the enormous impact of World War II, which saw the United States rise to a position of world leadership, generated a scientific revolution which is still going on today, and left in its aftermath a ferment of change and dissatisfaction, the effects of which will be felt well beyond the present generation.

In Iowa, change has come less abruptly, yet it <u>has</u> come. Since the early 1940's we have felt increasingly the impact of a revolution in agricultural technology which has had the effect of steadily reducing our farm population. In this transition period, our cities have grown in both population and industry, acquiring in the process many of the urban problems which we used to think were peculiar to other states with larger metropolitan areas. These and other shifting currents in Iowa life have already generated responses in our patterns of law, politics, and education. Doubtless this process will continue and perhaps accelerate.

Caught up in the fast-moving events of the modern era, universities such as ours have been called upon to respond to new challenges and new conditions. It has been my privilege to witness from the closest vantage point a period of great growth and change at the University of Iowa, as this institution has sought to keep pace with the world around it. It would require a longer document than this one to chronicle all the developments of more than passing significance; but, and at the risk of important omissions, let me mention a few of them as indicators of where we have been and where we are likely to be as the future unfolds. Even more startling are the comparisons which show that in this same period research grants from outside private and public agencies increased from \$58,000 in 1940 to \$5,702,000 in 1963-64; similarly, scholarships from outside sources increased from \$6,667 to \$1,460,000. The total payroll in 1940-41 was \$3.5 million dollars. This amount would not cover the payroll deductions which we made on this year's payroll of \$34.6 million. and the total operating level for all divisions of the University, excluding construction and debt service, has jumped from \$8.3 million in 1940 to \$84 million for the current year, of which \$61.1 million represents cash receipts and disbursements and \$22.9 million represents internal transactions. Of the total operating level, state tax funds appropriated at the last session of the legislature account for \$29.7 million, or slightly more than one-third. Student fees, gifts and grants, endowment income, and earnings from SUI services account for the major portion of the remainder.

While impressive, these figures tell the story of growth and development at the University on a superficial level at best. More important than the figures are the programs, achievements, and over-all contributions of the University which are reflected, often only indirectly, in the impersonal statistics which I have supplied here.

Our statistics on enrollment, for instance, do not in themselves reveal that in recent years the caliber of our student body has markedly increased, as more and more students leave high school with better preparation than they did a generation or even a decade ago. Nor do facts concerning numbers of teachers show the continuing growth in stature of members of the University faculty, many of whom are better known for their contributions to human knowledge in other states and abroad than they are in Iowa.

A CONTINUING RESEARCH EFFORT

Research work by University faculty, both individually and collect-

REPORT OF STATE BOARD OF REGENTS

ively, forms part of a continuing research effort carried on since this institution's inception. As the figures on grants to the University indicate, the pace of University research has accelerated and the range expanded. This is not surprising. So vital has the work of the universities become, particularly in the sciences, that the federal government and other agencies have turned increasingly to these centers of trained intelligence for fundamental work in research and development. The orientation of the modern world toward science and the technologies is a major phenomenon of our time. It is said, for instance, that scientific knowledge has been doubling every ten years, and that nine out of ten scientists produced in the history of mankind are alive today.

If it were possible to catalog all of the major research undertaken at the University of Iowa in the past quarter-century, I am sure that virtually every facet of human knowledge would be touched in some way. Much research is not spectacular; it yields no sensational headlines in the daily newspapers. It is in the nature of scientific inquiry that advances are made slowly, as facts are gathered and hypotheses tested and verified step by step. Nonetheless, research at the University occasionally makes news, and much of it that is not widely reported represents significant contributions to a given body of knowledge.

Certainly the most widely heralded research effort of the University in my memory has been our close involvement in the space age. Everyone is now familiar with the work of Prof. James Van Allen and his team of brilliant young physicists, whose satellite experiments led to the discovery of the radiation belts subsequently named by other scientists in his honor. The Iowa physicists continue to explore the mysteries of these zones and the vast reaches beyond them.

There are so many other contributions deserving of recognition that they cannot possibly be chronicled here. For example, when I came to the University in 1940, our medical facilities had already gained national recognition in many areas, through the work of such physicians as Dr. Arthur Steindler in orthopedics. The first successful use of Vitamin K in man was reported here, and members of the medical faculty were making important contributions to the problem of storing and preserving blood, which proved of great value in World War II. Since that time medical research has continued apace. I could mention the technique developed by orthopedic surgeon Adrian Flatt for replacing finger joints deformed by arthritis with artificial joints of stainless steel, the development of special instruments for the examination of the eye by the Department of Opthalmology, or its so-called "Iowa implant," an artificial eye of molded plastic to which the eye muscles are sewn so that it moves in unison with the normal eye--a procedure now used throughout the world in cases where the removal of one eye becomes a medical necessity. One might also mention the interesting studies going on in the Department of Physiology on the effects of gravitation on growth, or the pioneering work done here on transurethral surgery. At this very moment, University researchers are making substantial progress on a vaccine to combat shistosomiasis, a parisitic disease--little known in this country--which affects millions in Africa, Asia, and South America.

Other agencies within the University ranging literally from the "A" of anatomy to the "Z" of zoology, can also claim records in research of equal stature: for instance, the work of our pioneering department of speech pathology and audiology in a wide variety of speech defects and problems; the highly useful studies of our Institute of Hydraulic Research, one of only a handful of such organizations in the entire world, which has contributed so much to our knowledge of the laws of fluid mechanics, ship design, erosion protection, flood control, and other related matters. In zoology, the contributions of Prof. Emil Witschi on sex differentiation have been of such stature as to win widespread acclaim (a fact which I recently confirmed for myself while visiting the Department of Zoology of the University of Delhi, India) in Europe and elsewhere, and the research of our psychology department has earned it a ranking among the top five or ten such departments in the United States.

The University also became, through the creation or expansion of a number of departments and services, more closely involved in the problems of Iowa. Our Bureau of Business and Economic Research provides important studies on trends in Iowa economic life, while the Bureau of Labor and Management is a center for training and information for Iowa business and labor leaders. We now have an Institute of Public Affairs, devoted to improving community and governmental service in this state through research, consultation, and the dissemination of information, and a School of Social Work to provide professionally-trained workers in this field. Among other agencies directly involved in improving Iowa life, the Institute of Agricultural Medicine, the Agricultural Law Center, and the Institute of Gerontology come immediately to mind. In the field of education, I would be remiss if I did not mention the Iowa Testing Program, which, under the guidance of Dr. E. F. Lindquist, has maintained a consistent position of leadership. The development here of high-speed electronic scorers and other associated apparatus, as well as refinements in testing methods and techniques, has been of great value in the nation's testing programs.

Finally, before discussing some of the events of the year just past, I would like to mention very briefly one or two other changes which have materially affected the University in recent years. First, the Iowa Medical Compensation Plan, which was begun in 1946, has proven itself most effective in keeping and attracting qualified medical faculty. Now widely copied, this plan allows medical professors to match a percentage of their salaries with fees earned in treating private patients. By thus raising, in effect, the levels of financial reward for such personnel to a point consistent with conditions prevailing in the medical field as a whole, the compensation plan has been instrumental in preserving the quality of our College of Medicine.

The other development concerns private gifts and alumni contributions to the University. While private colleges and universities have long enjoyed such support, it is only within recent years that the concept has been applied widely to public higher education as well. Increasingly, we are realizing that the support of generous alumni and friends can make the difference between a good university and an excellent one. Just as many private institutions have begun to broaden their base of support to include governmental funds, so the public universities have turned to private and other sources to supplement their tax dollars. The needs of higher education today are so urgent that this trend was probably inevitable, and in any case, it is beneficial. Here at the University of Iowa, the SUI Foundation and the Old Gold Development Fund, in cooperation with our Alumni Association, are serving to channel many gifts to the University. Their work is proving essential in our efforts to preserve and enhance our standing as a leader in public higher education.

RECENT ADVANCES AND ACCOMPLISHMENTS

The following developments of the last year or so--just a few of the highlights--are indicative of the lines along which the University is changing and advancing.

In the fall of 1963, as I mentioned previously, the University's enrollment stood at 12,923, an increase of 809 over the year before. Although this enrollment is an all-time high, following a decade of steady gains, it is certain to set only a temporary record. Enrollments are expected to climb steadily for the foreseeable future, and even by the most conservative estimates, the University should reach the 20,000 level early in the 1970's.

The scientific orientation of much of this research has not overshadowed the traditional concern of the University of Iowa for the humanitities and the creative arts. Long since established as a center for music, drama, creative writing, and art, the University continues to extend its reputation in these areas. More than 40 of our former music students are now deans or department heads of music schools across the country, and a number of our faculty have won international competitions for their performing abilities. Young playwrights in our dramatic arts program continue to win prizes, and in art, the work of both students and faculty has received praise in exhibits in the United States and around the world. Under the leadership of Mauricio Lasansky, the art department's program in printmaking has made Iowa City a leading center for this old, yet ever-changing art, and the term "Iowa print group' is recognized throughout the world.

STATE AND NATIONAL NEEDS

Along with continuing high standards of performance, the University has sought in a variety of ways to remain relevant to the changing political, social, economic, and educational conditions of our era. As the United States moved into a position of world leadership and so many new nations began to emerge on the world scene, it became apparent that our citizens would need to know a great deal more about other parts of the world. The University, in response to these needs, stepped up its program in languages. It has established an Institute for Chinese Language and Area Studies, one of 12 such agencies set up in cooperation with the U. S. government, and a Department of Russian, offering for the first time a "major" in that language. Even before these steps were taken, the University had moved to strengthen undergraduate education in the liberal arts through the addition of required survey courses. This change, which was implemented at the close of World War II, placed the University among the leaders in what later became known as the "general education" movement.

During the past year, a significant step in the University's continuing effort in the "pursuit of excellence" has been the creation of three special chairs or professorships in the College of Liberal Arts. The first was created by virtue of the Louis W. and Maud Hill Family Foundation establishing the Louis W. Hill Professorship in Speech Pathology. The Hill Professorship is held by Dr. Wendell Johnson, who has become internationally known for his work at the University on stuttering. The second is the George H. Gallup Chair of Journalism established by the Quill and Scroll Foundation in honor of an alumnus famed for his readership surveys and opinion polls. Dr. Malcolm S. MacLean, Jr., formerly Acting Director of the Communications Research Center at Michigan State University, is the new Gallup Professor. And finally, M. F. Carpenter, a University faculty member since 1919 in the English Department, has established the Millington F. Carpenter Professorship of Literary Criticism, the first holder of which is Dr. Murray Krieger, who comes to us from the University of Illinois.

During this period, the University has been expanding its offerings in computer courses and strengthening its computer facilities. In one year, the number of courses relating to computers has nearly doubled, and presently 12 departments, ranging from geography through psychiatry, are now offering courses in this field. In addition, the College of Education has introduced a new and unique program which eventually may provide centralized computer service to many public schools in Iowa in handling administrative tasks such as grading, record keeping, and classroom scheduling--the first program of its kind to be tried on a statewide basis.

We continue to make progress in the fine arts. First steps have now been taken toward the construction of a consolidated Fine Arts Campus to be located on the west bank of the Iowa River where we already have facilities for art and drama. This ideal setting, potentially one of the most beautiful among American universities, will one day provide enlarged art galleries, studios, and classrooms; additional theatre facilities; a music building and recital hall; and an all-University auditorium. The gift of the valuable Owen and Leone Elliot Art Collection, consisting of the paintings of many modern French masters, jade, rare prints, and antique silver, has served as an impetus to our planning. Through state appropriations, funds for additional classroom and studio facilities in art are already available, and a campaign for private

STATE UNIVERSITY - REPORT OF PRESIDENT

donations is expected to enable us to enlarge our galleries. Financing of the long-needed auditorium has been assured through a special student fee increment.

The University has been participating in a number of programs with an international orientation, including the training of Peace Corps volunteers for Indonesia. In cooperation with Iowa State University of Science and Technology, members of the University's law faculty are engaged in the "Iowa-Peru Project," a program of agricultural reform in that country sponsored by the U. S. Agency for International Development (AID). We have also been conducting summer programs for Cuban refugees aimed at training them to become Spanish teachers in Iowa public schools.

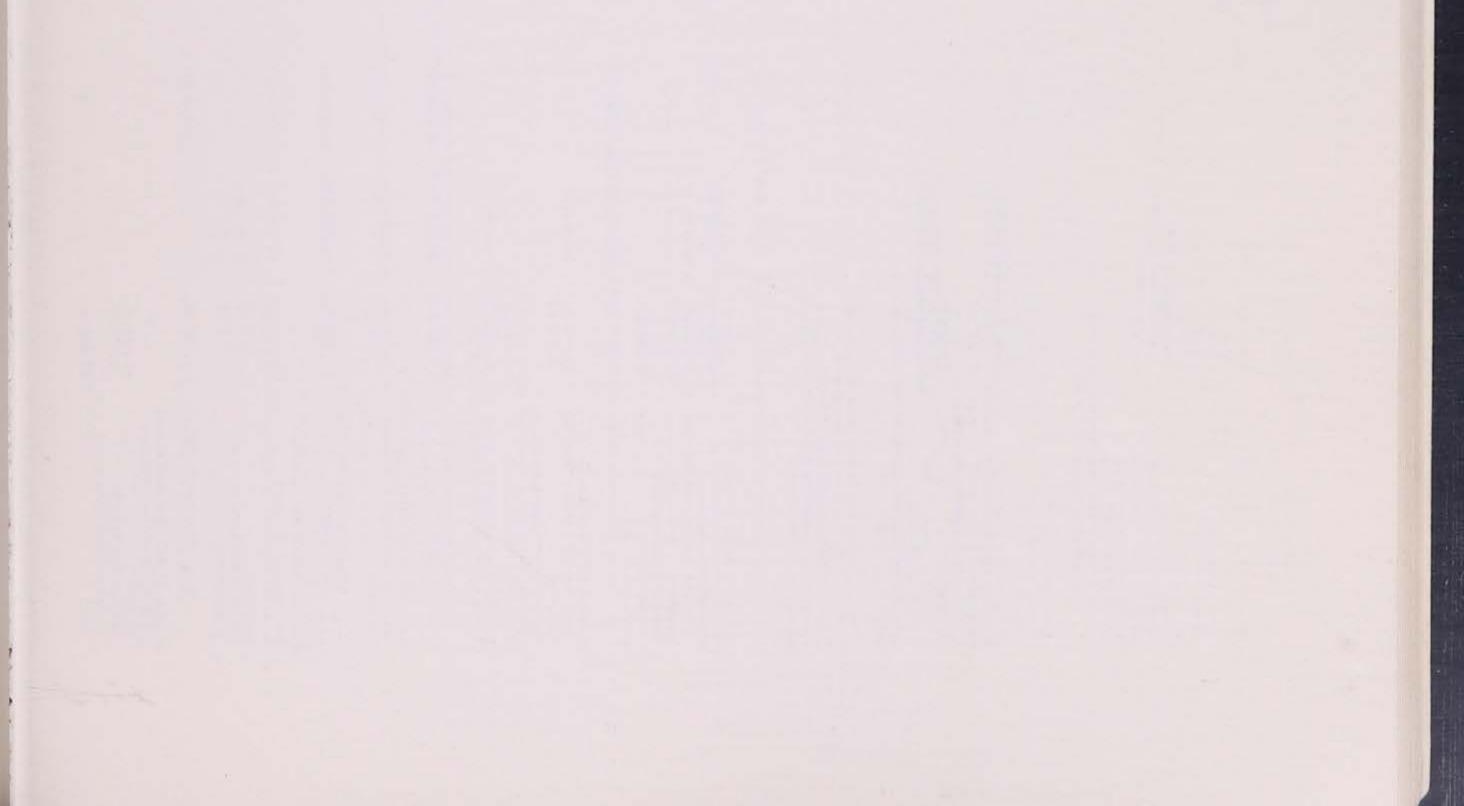

Attention continues to be drawn by our Iowa Writers Workshop, recently referred to in a national magazine as the foremost such program in the country. This program has now been expanded by the addition of a Translation Workshop, the only one of its kind, in which students and faculty translate the works of well-known writers abroad into English. The idea for the workshop was inspired by the fact that the works of many important contemporary figures in literature are not available in English and, consequently, are almost unknown in the United States. This work, in its own way, will contribute to international understanding.

And finally, I should note that many members of our faculty continue to receive recognition. To mention just a few examples, Charles Treger, first American violinist to win the international Wieniawski violin competition in Poznan, Poland, won the praise of music critics for his solo performances with the National Symphony. Orchestra and the New York Philharmonic; Guggenheim Foundation Fellowships were awarded to Mauricio Lasansky, Art, and Wilmer Miller, Chemistry; James R. Fouts, Pharmacology, won the John J. Abel Prize for outstanding research, independence of thought, and originality of investigation; James Dixon, conductor of the University Symphony, received and accepted an invitation to be a guest conductor of a major German symphony orchestra, one of the few nativeborn Americans to be so honored.

From this necessarily sketchy review, I hope I have conveyed something of the changes which have occurred at the University during the last quarter-century. It was my privilege to serve during a time which, if complicated by troubled world conditions, was also full of opportunities. In the immediate future, it seems certain that the University of Iowa will face more and perhaps greater challenges. Such is my confidence in this institution, however, that I am sure it will meet them successfully and emerge the stronger and more vital for it.

.

I cannot close this report without expressing appreciation for the many persons who contributed during the years 1940 to 1964 to the intellectual and material advances of the University. It is impossible for me to pay tribute to each one. Their number, quite literally, is legion. Some of those persons are now dead and cannot be thanked in person. But whether they be dead or living, they deserve both praise and thankfulness from all of those who, like myself, have found in this University an abiding source of wisdom and inspiration.

FULL-TIME EQUIVALENCY ENROLLMENT

The following table is computed from the total credit hours for which resident students are enrolled during the third week of each semester and summer session. The total of all credit hours for each semester for the College of Liberal Arts, Pharmacy, Business Administration, Nursing, Medicine, Dentistry, and Law is divided by 16; the total of all credit hours for the College of Engineering is divided by 17; and the total of all credit hours for the Graduate College is divided by 10. The divisors used for the summer session are 8, 8, and 5 respectively.

The quotients obtained are added to obtain the full-time equivalent figure for each session. The full-time equivalent figure for the academic year is taken as $\frac{1}{2}$ the sum of the equivalent figures for each semester. The equivalent figure for the full year is obtained by adding $\frac{1}{4}$ of the summer session equivalent figure to the equivalent figure for the academic year.

		Academic Year Sept. 17, 1962 June 5, 1963	June 12, 1962
1.	Full-time equivalency for students in residence of college grade	11,471	12,716

IOWA STATE UNIVERSITY - REPORT OF PRESIDENT

James H. Hilton

Those of us who remember World War II often find it hard to realize that a whole new generation has grown up since that time. That generation already is being assimilated into adult responsibilities in our society. Soon it will advance to leadership.

Many of those who served in our armed forces during that conflict 20 years ago came home to enter college where they established high academic records, then went on to assume key roles in the advancement of science and in our political, economic and cultural affairs.

No nation ever made a wiser investment than did we in establishing financial aid to help these ex-G.I.'s through our colleges and universities. This was not merely a gesture of appreciation toward some brave fighting men. It paid off in a high rate of economic return as well as innumerable other ways.

REPORT OF JAMES H. HILTON, PRESIDENT

needs of this University. These needs will not grow less in the future.

The United States Office of Education foresees a virtual doubling of college enrollments in 1973 as compared with 1963. It believes national expenditures for higher education will rise to \$16.5 billion by 1973 as compared with \$9.3 billion in 1963-64. Our increases in Iowa may be somewhat more modest, percentage-wise, but will follow the national trends.

The state or nation which does not subscribe to education for its people on a broad base and at a high level will not long remain in the mainstream of progress and development.

It has become almost axiomatic in these days that people are our basic resource. Our "human capital" builds industries, extends the frontiers of knowledge upon which new industries are based. We know that education can do much to enable us to cope with our social, economic and political problems.

The primary purpose of a college or university is the development of the individual, but this has very strong implications for the welfare of society or for the particular state or community in which that individual lives.

Iowa State has always felt a responsibility, not just to the students on the campus, but to citizens in all parts of Iowa.

A brief review of a few of the activities of this university in the past two years will serve to emphasize the manner in which the university plays its three-part role of teaching, research and service.

In the fall of 1964 enrollment at Iowa State was 12,451, an increase of more than 900 over that of 1963. Included were 1,960 in the Graduate College, 1,862 in the College of Agriculture, 116 in Agricultural Engineering, 3,013 in Engineering, 1,767 in Home Economics, 3,472 in Sciences and Humanities, and 261 in Veterinary Medicine.

This was about 3,200 more than five years ago in the fall of 1959. A strong growth in the Graduate College is in line with national trends which show a 31.5 increase since 1960.

Our growth is no enrollment "bulge". We can expect smaller or larger increases throughout the foreseeable future.

When the veterans of the last war returned home they represented a pent-up demand which had not been satisfied during the years of fighting, and this demand was increased by the scholarship provisions of the G.I. Bill of Rights. After these men left the campus there was a temporary decrease in enrollment although it never fell to the level of pre-war years.

Our present situation is far different. The birth rate has

These men not only were good students and good citizens but also good fathers. They established larger families than had their fathers before them. A long-time decrease in our birth rate was reversed, and the rate has stayed relatively high ever since.

This had some obvious implications for the nation's educators. They saw first the kindergarten and then the elementary grades of our schools filled to overflowing. Then it was the high schools.

We in higher education knew that in the mid-sixties it would be our duty to give this new generation the same opportunities their dads had in the late 1940's.

Now these young people are on our campuses. We are finding them better prepared for college study than any previous group. This is fortunate, because there is vastly more to learn -- in science, especially, but in varying degrees in almost every academic discipline. Our modern college and university graduates must know more simply because there is so much more knowledge to be mastered.

Iowa State is by no means unprepared for the responsibility and the opportunity which this represents. For some years, in common with the other Regent institutions of higher learning, it has plotted the future curve of rising enrollments. These estimates have turned out to be excellent guides, except that they were somewhat conservative. We failed to take into account fully that a much larger percentage of Iowans of college age are seeking higher education. This is now approximately 44 percent, and it rises each year.

We have at the same time constantly broadened and upgraded our academic programs to keep pace with a very rapidly changing world.

To teach larger numbers of better qualified students and to afford them the advanced education which their world will require has involved no small financial support from the State of Iowa. Generally, the people of Iowa have understood this and have been sympathetic to the genuine

remained high. Each year a larger percentage of our young people enter college. They stay longer, often go on for advanced degrees.

We continue to see evidence of the high level of the preparedness of these young people. In the freshman class of 1964 some 93 percent came from the upper half of their high school graduating classes. This was mainly a matter of self-selection. On the whole, those who sought admission to Iowa State were the ones who had already established their ability and their serious purpose through their high school records. They had proved they could profit from the opportunity for higher education.

Although Iowa State has for a number of years operated on the quarter system and has conducted classes throughout the year we have recently seen substantial increases in our summer quarter offerings. The two sessions held in June, July and August this year enrolled 7,288 students. Summer is by no means the quiet, "interim" period which it is commonly supposed to be on the campus.

Since 1955, when the National Merit Scholarship program was begun, Iowa State had graduated 17 of the scholarship winners, according to the 1963 report of the NMS corporation. Of approximately 2,000 colleges and universities in the United States less than 35 had exceeded this number.

In 1960-61, latest for which information is available, Iowa State ranked eleventh in the nation in the number of Ph.D. degrees awarded in the physical sciences and ninth in Ph.D. degrees awarded in the biological sciences.

While exhibiting such an interest in the highest kind of scholarship, the University did not neglect those who were unable to study at this level or who did not wish to do so.

In 1963 the Technical Institute within the College of Engineering received accreditation from the Engineers' Council for Professional Development. The Institute, a two-year program for the training of technicians, was established in 1960, and has been highly successful. It is now offering programs in construction technology, electronics technology, mechanical technology and chemical industries technology. Most of its

graduates have accepted jobs with industry in Iowa, and have been very well received.

The University schedule of conferences and seminars in agriculture, engineering, home economics, veterinary medicine, science and other areas brought more than 20,000 people to the campus in 1963-64 for programs from one to several days. More than 6,000 others attended similar programs off-campus, and 20 field days in agriculture attracted 15,000.

The physical plant of the University has undergone steady improvement, much of it designed to take care of increasing enrollments.

Educational buildings placed into service in the past two years included one for chemical engineering and nuclear engineering, an excellent structure for physical education of men, and a new teaching-research center for poultry studies. Under contract or construction in 1964 were substantial additions to the chemistry building and the physics building and new buildings for both animal industries and plant industries. These came from legislative appropriations augmented in some cases by federal grants. They do much to modernize and enlarge our physical plant to meet today's needs, but they do not eliminate our use of temporary wooden structures or obsolete space in very old buildings.

Sometimes we fail to realize that the State of Iowa pays for only about half of the total plant at Iowa State. The remainder is financed through student fees, gifts, grants or earnings from certain services or contracts which the university performs.

The extensive system of student residences is entirely self-supporting from rentals and food service charges. Almost yearly we find it necessary to enlarge this system to accommodate growing numbers of students. In the fall of 1963 we added a 430-bed men's residence unit. In the fall of 1964 a graduate dormitory for 122 women and 268 men was opened. In that same year construction was under way on additional units for men, women and married students. The University generally has attempted to house about half the total student body in university-owned buildings. The remainder resides in fraternity and sorority houses, private homes and apartments.

A Communications Building in which no tax funds were involved was occupied in 1964, and an addition to Memorial Union, financed from income and student fees, was started.

A valuable research facility of the type found on very few campuses was added in 1964 when the Ames Laboratory of the United States Atomic Energy Commission completed a 5 megawatt research reactor at a cost of approximately \$4.5 million.

Iowa State has been since its beginning concerned with the growth and well-being of agriculture and industry, upon which the economic health of our state depends. It has involved itself more directly with these problems in recent years, and seems certain to do even more in the future.

In addition to extension and research services it has taken leadership through two specific organizations within the University. The Center for Agricultural and Economic Development has been functioning for some time and its contributions have been recognized not only in Iowa but throughout the nation. The Center for Industrial Research and Service was organized following an initial appropriation by the 60th General Assembly, and now has begun to provide some of the resources which will make it valuable to business and industry throughout the state.

Iowa State's primary concern will always be for the welfare of Iowa

University scientists are constantly in touch with their counterparts in other nations through international conferences to which our staff members are contributors. A number of them have accepted individual foreign assignments to lecture in universities, to associate themselves with research institutions or to aid in educational projects for a period of time.

We have encouraged our undergraduates to travel, study and live abroad through such programs as the Student Project for Amity among Nations (SPAN), the International Farm Youth Exchange (IFYE) and our annual agricultural travel study course.

We think our staff and students benefit fully as much from these activities as do the persons of other nations with whom they are associated. And I am certain that the State of Iowa has a net profit in knowledge and understanding. Nearly all financing, incidentally, is by federal or private funds.

This, then, is a brief overview of a few of the significant developments at Iowa State University today.

In the concluding paragraphs of this statement are listed the individual teaching, research and extension activities in which the University is engaged in 1964.

ACADEMIC PROGRAMS

A quick review of the programs to which the University gives major emphasis can be gained from the following academic areas in which study leading to the degree of Bachelor of Science is now offered by the University.

AGRICULTURE--Agricultural Business, Agricultural Economics, Agricultural Education, Agricultural Engineering, Agricultural Journalism, Agronomy, Animal Science, Dairy Science, Dairy Industry (with options in Chemistry or Economics), Entomology, Farm Operation, Fish and Wildlife Management, Food Technology, Forestry (also Forestry with majors in Conservation, Farm Forestry, Forest Utilization, Range Management, or Wildlife Management), Horticulture (with options in Floriculture, Fruit Crops, Nursery Management, Vegetable Crops or Turf Management), Industrial Education, Landscape Architecture, Plant Pathology, Foultry Science, Rural Sociolo-99.

ENGINEERING--Aerospace Engineering, Architectural Engineering, Ceramic Engineering, Chemical Engineering, Civil Engineering, Electrical Engineering, Engineering Operations, Engineering Science, Industrial Engineering, Mechanical Engineering.

HOME ECONOMICS--Applied Art, Child Development, Child Development--Elementary, Food and Nutrition (with majors in Dietetics, Experimental Foods or Community Nutrition), Home Economics for General Education, Home Economics Journalism, Home Economics and Related Science, Home Economics Education, Home Management, Household Equipment, Institution Management (with majors in College Food and Housing Administration or Restaurant Management), Physical Education for Women, Textiles and Clothing.

SCIENCES AND HUMANITIES--Bacteriology, Biochemistry, Biophysics, Botany, Chemistry, Distributed Studies, Economics or Sociology, English and Speech, Genetics, Geology, Government, History, Industrial Administration, Psychology, Mathematics, Metallurgy, Modern Languages, Naval Science, Physical Education for Men, Physical Education for Women, Physics, Statistics, Technical Journalism, Zoology. (Also special programs in preparation for human medicine, veterinary medicine and law).

120

and the individual citizens of the state. Yet, the University by its very nature is destined to play an important international role. Nations throughout the world are inspired by the manner in which Land-Grant education has contributed to the progress of the United States in the past 100 years. They are asking for help in establishing similar patterns of education, adapted to their own environments. Iowa State is obligated to do its share not only from a humanitarian standpoint but from a purely self-interest as well. World peace is more likely to be achieved if all of the nations of the world are economically sufficient and if their peoples are broadly educated. Iowa State can contribute to both goals.

About 500 foreign persons are in residence on the campus each year. Some of them are engaged with our own scientists in research and study on a post doctoral level. A few are members of our faculty. Others are graduate or undergraduate students in agriculture, home economics, engineering, science or veterinary medicine.

Presently, the College of Agriculture has several projects in South America through United States governmental agencies. One is concerned primarily with improvement of livestock production in Argentina, a second is concerned with agrarian reform and agricultural credit in Peru, a third with providing advice and assistance to three educational institutions in Uruguay, and still another with lending agricultural education assistance in Brazil.

As a member of the Mid-America State Universities Association, Iowa State is participating in two cooperative programs in engineering education in Peru and the United Arab Republic.

A project in home economics with Baroda University in India has been under way for some time under sponsorship for the Ford Foundation.

The College of Agriculature alone receives about 200 foreign visitors each year who seek information about educational methods or about the unparalleled productivity of Iowa Agriculture. Similar groups with interests in science, engineering, home economics or veterinary medicine can be found on campus almost any week of the year.

The University has trained two groups of Peace Corps Volunteers.

In addition, the University offers studies leading to the degree of Bachelor of Architecture and Bachelor of Architectural Engineering (five-year programs), and Doctor of Veterinary Medicine (six-year program). The graduate college offers courses leading to the master's degree and to the degree Doctor of Philosophy.

For the benefit of students unable to spend four years or more in college study, special programs are offered which may be terminated in less time. These programs include Dairy Plant Operation, (4 quarters) and several two-year programs leading to a certificate in technical agriculture.

The Technical Institute programs are also of two-year duration, normally.

RESEARCH PROGRAM

Research at the University is organized within six units, each of which has a responsibility in a particular area:

THE IOWA AGRICULTURAL AND HOME ECONOMICS EXPERIMENT STATION conducts research on the campus at Ames and at farms near Ames and Ankeny, as well as in outlying farms and experimental plots in major soil areas of the state.

THE IOWA ENGINEERING EXPERIMENT STATION was, with that at the University of Illinois, the first of its kind in the nation back in 1904. Its objectives always have been to foster and develop the industries of Iowa through engineering research, to aid in the development of raw materials and natural resources of the state, to increase utilization of agricultural by-products, and to aid in the solution of engineering problems for industry and for the state and local governments.

THE INDUSTRIAL SCIENCE RESEARCH INSTITUTE provides fundamental facts and principles which underlie the successful solution of agricultural and industrial problems of Iowa.

THE INSTITUTE FOR ATOMIC RESEARCH includes the Ames Laboratory of the United States Atomic Energy Commission where basic research is conducted in the field of nuclear energy.

THE STATISTICAL LABORATORY was organized in 1933 for the purpose of promoting and fostering the use of statistical methods in the research of the University and of conducting research in statistical theory and methodology. The Laboratory cooperates with all departments of the University and with other research units on campus.

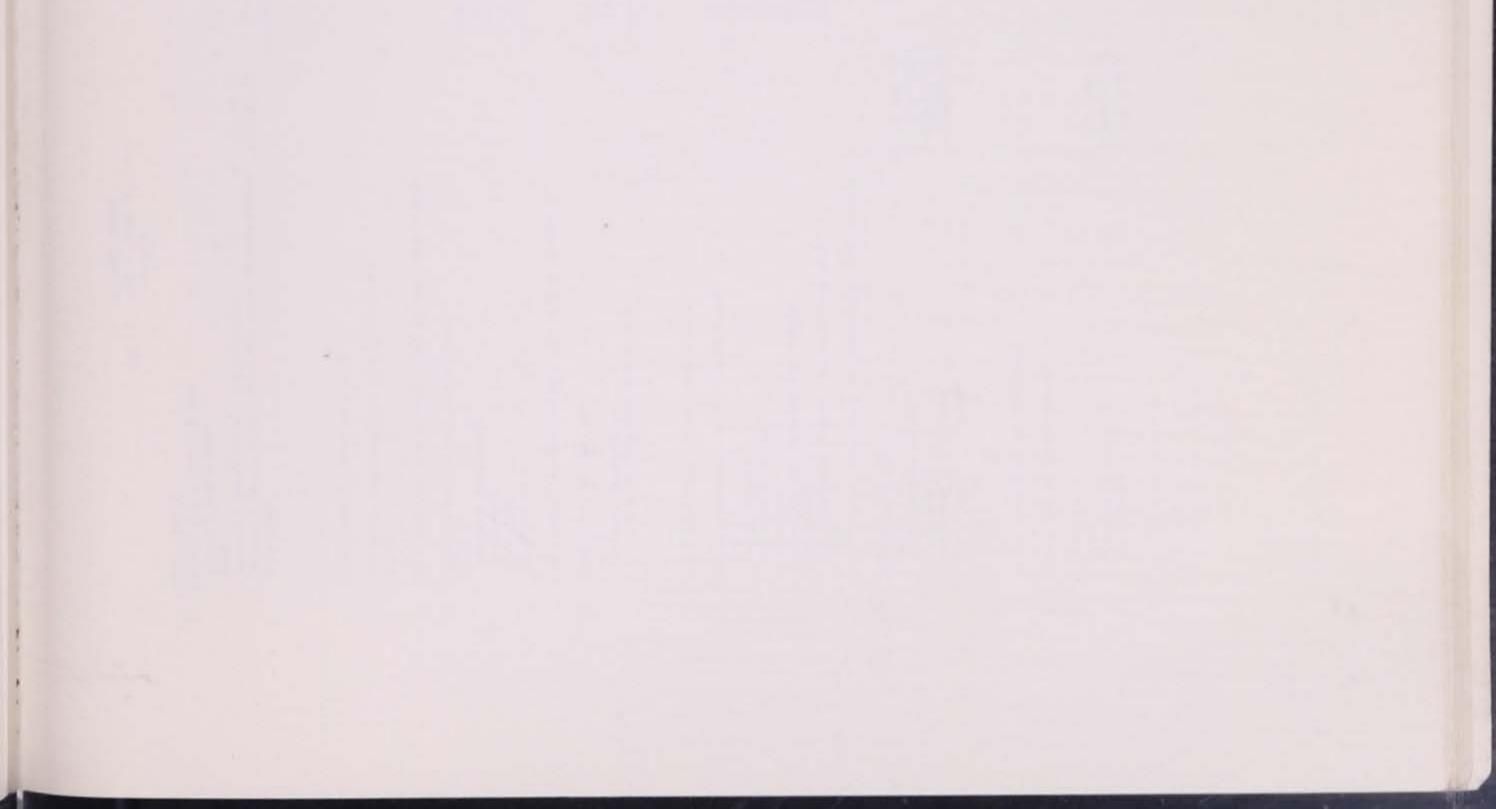

THE VETERINARY MEDICAL RESEARCH INSTITUTE works on problems of controlling or eradicating disease in food-producing animals.

EXTENSION SERVICE

THE COOPERATIVE EXTENSION SERVICE IN AGRICULTURE AND HOME ECONOMICS is

part of a nationwide Extension Service operating through paid employees. In addition, nearly 45,000 volunteers each year assist in carrying extension activities to every county in Iowa. In a single year the Extension Service provides educational assistance to more than 100,000 Iowa farms, and about 65,000 Iowa homes.

THE ENGINEERING EXTENSION SERVICE operates in the fields of public servic, industry, technology and engineering. It conducts vocationaleducational training for persons in semi-technical positions for which an engineering degree is not required. It carries on professional education for engineers, executives and supervisory personnel of industry. It gives specific advisory and information assistance to lowa industries, municipalities, associations and citizens.

FINANCIAL REPORT OF THE IOWA STATE UNIVERSITY OF SCIENCE AND TECHNOLOGY

Report of the Secretary and the Treasurer for the period July 1, 1962 to June 30, 1963

J. E. Marks, Controller and Secretary

J. P. Dodds, Treasurer

GENERAL COMMENTS

The Iowa State University is a Land Grant institution, established under the provisions of the Morrill Land Grant College Act of 1862. The University provides technological instruction and performs research and instruction for the citizens and industry of Iowa and for the nation.

The University receives its income from state and federal appropriations, student fees, departmental sales, investment of endowment funds and treasurer's balances, and from gifts, grants and the proceeds of research contracts with industry and governmental agencies.

During the fiscal year just ended there was notable progress in the building program on the campus and enrollment in all Colleges of the University increased.

The fiscal records of the University are maintained on a fund basis. The fund groups are: Current Funds, Loan Funds, Endowment Funds, Plant Funds, and Agency Funds.

The <u>CURRENT FUNDS</u> of the University, reflecting the current operating income and expenditures, give evidence of this institutional growth. Receipts for the year amounted to \$45,664,289; expenditures for the same period were \$45,567,556.

The LOAN FUNDS increased \$287,819 in value during the year. This was largely due to an increase in the Federal Loan Fund, which now amounts to \$1,054,623.

The ENDOWMENT FUNDS increased in value during the year from \$1,645,971 to \$1,683,674.

The <u>PLANT FUND</u> accounts record the value of the physical properties of the University. During the year the valuation of these facilities increased \$5,122,314 due to progress in the construction program on the campus. These additions were financed by revenue notes for the additions to dormitories and by state appropriations and grants from agencies of the federal government for additions to structures for instruction and research.

In addition to the property mentioned above the following affiliated organizations own and use facilities on the Iowa State University Campus:

\$ 2,224,825
98,498
313,920
11,355,557

Total \$13,992,800

The value of this property added to the University owned facilities makes a total value of property in use by the University and its affiliated organizations of \$71,456,487.

The <u>AGENCY FUND</u> group consists of accounts which control funds in the custody of, but not owned by the University. The principal accounts in this group are those controlling activities in campus and student organizations and those representing taxes and employees' benefits deducted from employees' earnings and held temporarily by the University pending payment to the government or to insurance companies. The value of this group increased \$63,140 during the year and now amounts to \$1,438,952.

IOWA STATE UNIVERSITY - 1963-64 - FINANCIAL REPORT

FINANCIAL REPORT OF THE IOWA STATE UNIVERSITY OF SCIENCE AND TECHNOLOGY

Report of the Secretary and the Treasurer for the period July 1, 1963 to June 30, 1964

J. E. Marks, Controller and Secretary

J. P. Dodds, Treasurer

GENERAL COMMENTS

The Iowa State University of Science and Technology is a Land Grant institution established under the provisions of the Morrill Land Grant College Act of 1862. The University provides technological instruction and performs research and instruction for the citizens and industry of Iowa and for the nation.

The University derives its income from state and federal appropriations, student fees, departmental sales, interest from the investment of endowment funds and treasurer's balances, and from gifts, grants, and the proceeds of research contracts with commercial and governmental agencies.

The fiscal year just ended was one of continuing growth for the University. Enrollment increased in all colleges of the University. The program of construction and addition to campus improvements was continued during the year.

The fiscal records of the University are maintained on a fund basis. The fund groups are: Current Funds, Loan Funds, Endowment Funds, Plant Funds, and Agency Funds.

The <u>CURRENT FUNDS</u>, which reflect the current operating income and expenditures, give evidence of the growth of the institution. Receipts for the year amounted to \$53,513,156; expenditures for the same period were \$49,430,082.

The LOAN FUNDS increased \$214,753 in value during the year. This was largely due to an increase in the Federal Loan Fund, which now amounts to \$1,259,529.

The <u>ENDOWMENT FUNDS</u> increased in value during the year from \$1,683,674 to \$1,691,185.

The <u>PLANT FUNDS</u> record the value of the physical properties of the University. During the year the valuation of these properties increased \$7,629,037. These additions were financed by state appropriated funds and grants from federal agencies for structures for instruction and research and by revenue notes for new dormitories.

In addition to the property mentioned above the following affiliated organizations own and use facilities on the Iowa State University Campus:

Memorial Union - Building and Equipment	\$ 2,221,065
Alumni Hall Trustees - Building and Equipment	96,498
Iowa State University Press - Building & Equipment	393,287
Atomic Energy Commission - Building & Equipment	12,365,190

Total \$15,076,040

The value of this property added to the University owned facilities makes a total value of property in use by the University and its affiliated organizations of \$80,168,764.

The <u>AGENCY FUNDS</u> are those which control monies in the custody of, but not owned by the University. The principal accounts in this group are those controlling activities in campus and student organizations and those representing taxes and employees' benefits deducted from employees' earnings and held temporarily by the University pending payment to the government or to insurance companies. The value of this group increased \$156,736 during the year and now amounts to \$1,595,688.

State College of Iowa

Cedar Falls

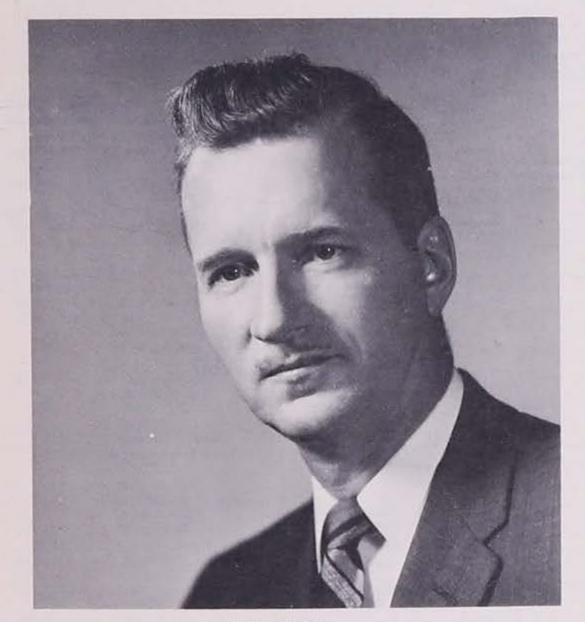

BIENNIAL REPORT

Period Ending June 30, 1964

REPORT OF J. W. MAUCKER, PRESIDENT

J. W. Maucker

The State College of Iowa has for its primary function the preparation of teachers and school service personnel for the schools of Iowa. The college also offers programs of instruction in the liberal and vocational arts and devotes considerable effort and resources to assisting the improvement of the public schools throughout Iowa by a program of educational conferences, consultant services, publications, and inservice educational classes in various communities. As a teacher educational institution, the State College of Iowa has a national reputation for turning out excellent teachers.

The vast majority of the SCI graduates plan to teach (93% of the graduates of June 1963) and a surprisingly large per cent of those who complete the teacher education programs begin in their teaching careers

curriculum. There are two degrees available at the Master's degree level: (1) The Master of Arts in Education for elementary and secondary teachers and school service personnel and (2) the Master of Arts for those who complete a master's degree curriculum with a major in any area other than professional education. SCI also awards the Specialist in Education degree upon completion of a curriculum requiring two full-years of graduate work. The Board of Regents has also approved the offering of a Master of Arts in Teaching degree for those students who have a Bachelor's degree but have not completed the professional education requirements for certification as a teacher. The details of this curriculum are currently (1964) being planned.

All programs offered by the college are fully accredited by the North Central Association of Colleges and Secondary Schools and all facets of the teacher education program have been fully accredited by the National Council for Accreditation of Teacher Education.

At the undergraduate level one may specialize in art, business education, elementary education, junior high school education, English, psychology, French, German, Spanish, home economics, industrial arts, mathematics, music, physical education, science, speech, social science, and library science. Minor areas of specialization are also available in safety education, Russian, and Latin, as well as in specific subject fields such as art, English, chemistry, history, political science, music, mathematics, physics, etc. Teachers are prepared in all the above areas with the exception of psychology and liberal or vocational arts, curricula are offered in all the areas except elementary education, junior high school education, safety education, and women's physical education.

Master of Arts in Education degree curricula are available for school principals, counselors, and elementary and secondary teachers. Masters of Arts degree curricula are available for those who have completed an undergraduate teacher education program and wish to continue to teach in an academic field such as art, business education, industrial arts, mathematics, music, English, speech, speech correction, social science, physical education, and science. Specialist in Education curricula are offered for school superintendents, principals, supervisors, counselors, college student personnel workers, and in industrial arts.

For completion of a bachelor's degree curriculum a minimum of 130 semester hours is required for those on a teacher education program and 124 hours for those on a liberal or vocational arts program. Of this approximately 43% (55 hours) is in the "General Education" program required of all students. This includes a <u>common core</u> of required courses in the communication skills, humanities, social sciences, mathematics, sciences, and physical education, and the election of certain other courses from a number of courses in the same areas. Each student is required to have an area of specialization and this varies from about 28% to 46% of the four-year program. Those who plan to teach are required to complete nine weeks of full time service as student teachers and to take from 15 to 35 additional hours of work in professional education courses.

SERVICE OF THE COLLEGE

in the public schools of Iowa (approximately 85%).

The enrollment at SCI has increased from 3,613 in the fall of 1960 to 5,505 in 1964; an increase of over 52%. The college expects to add 1,200 students, during the 1965-1967 biennium. To build the necessary instructional buildings and residence halls and to expand the food service facilities to take care of the increased numbers has been and will remain a major task of the college. The completion of a new men's hall (Shull Hall) has enabled the college to have normal occupancy in the men's residence halls for the first time since 1945. A new wing was added to Campbell Hall creating space for over 300 more women but with the increased number of women students, the over crowding in the women's halls has not been materially reduced. As of the fall of 1964, the women's halls are taking care of about 25% more students than the normal capacity. The college plans to have another women's hall ready for occupancy by the fall of 1965 and, at the same time, a new food service will be available. It will be necessary to have a new residence hall ready for occupancy each September until 1970 or 1972.

A major step relative to the financing of our residence halls and food service facilities was taken in 1964 with the selling of bonds. The proceeds being used to amortize current indebtedness and to raise funds for projects under construction. Additional bonds will be sold to finance future residence halls.

For many years all women students have been required to live either in a college residence hall or in their own homes, unless special permission to live in an off-campus approved home was given by the Associate Dean of Students. Men students were permitted to live off-campus in approved homes without such special permission. Beginning the fall of 1965 all <u>freshmen</u> men students who do not live in their own homes must live in a college residence hall unless special permission to live in an approved off-campus house is granted by the Dean of Students. This new policy was adopted in order to do a better job of orienting the new men students to college.

INSTRUCTIONAL PROGRAMS

The State College of Iowa offers only one undergraduate degree; the Bachelor of Arts which is awarded upon the completion of a four-year

The college attempts to serve the students and the people of the state of Iowa in a variety of ways. These services include the college Placement Bureau through which graduates and former students are aided in obtaining positions; the Student Health Service which provides preventive care and emergency medical services for all students, a program of conferences, workshops, and exhibits, to which teachers throughout the state are invited, which bring nationally-known leaders in the various fields of teacher education to the campus; the Curriculum Laboratory containing a comprehensive collection of courses of study, educational pamphlets, maps, textbooks from the various publishing companies, standardized tests, and other instructional aid; an Audio-Visual Center containing films, recordings, and various types of audio-visual equipment which teachers in the schools will be expected to operate; the Radio-TV Service producing programs both for in-class viewing for adult education (within the last few years, this office has also been assisting with the instructional program by the operation of a closed-circuit television studio); the extensive help given to the public schools through the consultant off-campus classes for teachers; correspondence study; non-credit classes for interested adults; and a series of more than 25 educational publications, primarily for the improvement of instruction.

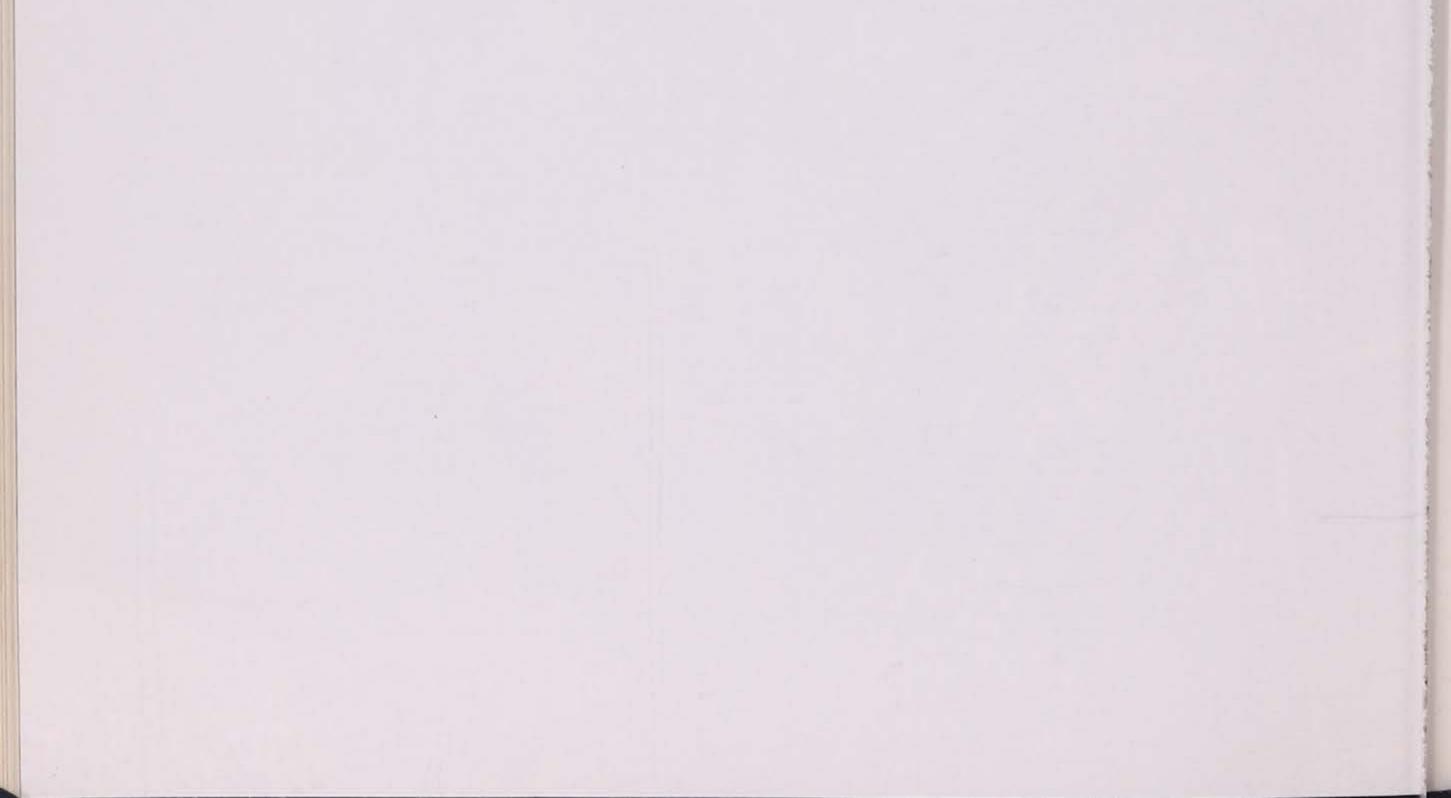

THE YEARS AHEAD

The administrators and faculty at SCI intend to continue to make the preparation of teachers and school service personnel the institution's primary function. We know, however, that there will be a gradual increase in the portion of our student body enrolled in programs in the liberal and vocational arts. To provide an adequate program for these students we may have to develop some courses that would not ordinarily be taken by prospective teachers. To date, three years after the State Legislature approved the offering of degree programs in non-teaching areas, this has not been necessary.

We feel the responsibility to prepare teachers for the technical institutes that are so urgently needed in Iowa. We know, aslo, that all colleges, but particularly, the state supported institutions, will have to increase their efforts in the field of adult education.

We recognize that adequate solutions to such problems as: (1) tak-

ing care of the increasing numbers of qualified students, (2) retaining our present faculty and employing the additional staff under conditions of increasingly tough competition, (3) modifying our programs to keep them consonant with the rapidly changing world, and (4) continuing to strengthen our program, will require the understanding and support of the Sixty-First General Assembly and of the people of Iowa.

FULL-TIME EQUIVALENCY ENROLLMENT

Computation is based upon an agreement between the three state institutions and the State Auditor's Office. The total hours for which all students are enrolled at the end of the third week of each semester or session are determined. These are added together to determine the total hours for the year. Undergraduate hours are divided by 32 and graduate hours by 20 to determine a so-called full-time equivalent.

	Academic	Year	Full	Year
	Semester Hours	Full-time Equivalent	Semester Hours	Full-time Equivalent
1962-63				
Undergraduates	122,968	3,843	132,547	4,142
Graduates	5,262	263	11,920	596
	128,230	4,106	144,467	4,738
1963-64

DEGREES AWARDED

	1906-1964	1962-63	1963-64	
All Degrees of Collegiate Grade	16,386	866	985	
Degrees now being offered Specialist in Education (1961-) Master of Arts in Education (1952-) Bachelor of Arts - Teaching (1933-) Bachelor of Arts - Liberal and Vocation (1962-)	11 889 11,428 al 155	124 696 46	10 149 737 89	
Discontinued Degrees ¹ Bachelor of Arts in Education (1906-193 Bachelor of Science in Education (1907-1933) Bachelor of Science in special lines (1933-1941) Bachelor of Science Master of Didactics ² (1905-1930)	3) 2,886 487 485 2 43			

- 1. Degrees offered before 1906 were not based upon four years of college after graduation from an accredited high school and are not included as standard degrees.
- 2. Awarded to holders of a baccalaureate degree, but not necessarily based on a fifth year of study.

Diplomas issued by the Iowa State Normal School have never been fully analyzed to determine the number which were issued of college grade, From 1909 to 1954, Iowa State Teachers College awarded 14,689 diplomas based on two or more years of standard college work. The last of these curricula were discontinued in 1954.

BIENNIAL REPORT

Period Ending June 30, 1964

IOWA BRAILLE AND SIGHT SAVING SCHOOL - REPORT OF SUPERINTENDENT

REPORT OF LEE A. IVERSON, SUPERINTENDENT

schedule of classes for children in kindergarten through the twelfth grade. The high quality of the program is insured by maintaining a welltrained staff of teachers, houseparents and other personnel; by maintaining small classes where each child can receive adequate, individual attention; by maintaining an attractive and functional physical plant; by maintaining an adequate supply of equipment, books and supplies; and by maintaining an up-to-date and comprehensive curriculum. Although the course of study is quite similar to that of the regular public schools of the state, some of the methods of presenting the educational materials to the students are different. Since some of the students have enough sight to read large print, all textbooks used are available in both Braille and large type. An extensive supply of related materials is also available to the students on Talking Book Records and on tape recordings. Such special devices as Braille writers, slates and styli, relief maps and globes, large magnifiers and various types of tactual models are used throughout the school. The excellent academic program is supplemented by a comprehensive library which is supervised by a full-time librarian.

In addition to the academic program the curriculum includes a number of other departments:

All students are given an opportunity to participate in music. Regular classroom music is given to all of the students in the lower elementary grades. Older students may elect to study piano, instrumental music and/or voice from one of the three full-time music teachers. For a number of years the school has had both an outstanding band and chorus.

All students, unless they have medical excuse, are required to participate in a period of physical education each day. This emphasis on physical development has produced many fine blind athletes in such areas as wrestling, swimming and track and has made significant contributions to all of the students' self-confidence, poise and general motor competence.

Industrial education and home economics courses are available to all students at the junior high and high school levels, and crafts courses are offered to the younger students. In industrial education such areas as woodworking, metal working, plastics, ceramics, home mechanics, drafting, auto mechanics, caning and piano tuning are stressed, while home economics includes foods and nutrition, sewing, home management and decoration, child care and grooming. A comprehensive program of business education is provided which offers courses covering typing, filing, office procedures and operation of transcribing machines.

One of the major problems imposed by blindness is in the area of orientation and mobility. In the past many blind individuals have had difficulty traveling about freely without assistance. Since World War II important developments have been made in the area of mobility training for the blind. The school has two staff members who are trained to teach in this area. One has a masters degree with a major in orientation and mobility. A complete program of instruction in mobility is offered to all students who do not have "travel sight." This program is producing excellent results with the students.

Lee A. Iverson

HISTORY AND LOCATION

The Iowa Braille and Sight Saving School was established as a private school in Keokuk in 1852. In 1853 it was adopted by the state and moved to Iowa City, where it remained until 1862, when it was moved to its present location on a fifty-five acre plot of land on the west edge of Vinton.

PHYSICAL PLANT

The school's physical plant consists of five major buildings. The Main Building, which was constructed in 1862, houses the offices, most of the class-rooms, one dormitory and the main kitchen and dining room. The Children's Cottage, which provides sleeping, dining, recreation and classroom facilities for the kindergarten and first grade students, was completed in the late 1920's. The Boys' Dormitory was completed in the early 1950's and provides dormitory and recreation space for the boys in grades two through eight. The gymnasium portion of the Physical Education Building was completed in 1961, and the swimming pool section was constructed in the early 1940's. Palmer Hall, which is the dormitory serving all of the girls above the first grade, was constructed in the late 1930's. The school also has a number of smaller buildings such as the Laundry, the Infirmary, the Heating Plant and a Maintenance Shops Building.

FUNCTION

The school was established early in Iowa's history to serve the educational needs of the visually-handicapped children of the state. During its 112 years of existence it has provided an outstanding educational program for thousands of boys and girls who were unable to attend the regular public schools because of visual impairments.

Since the students enrolled are from all parts of the state, it is necessary for the school to provide room, board and laundry services. The school does not attempt to replace the home, but rather to complement it. All students and parents are encouraged to maintain strong home and family relationships. Approximately 50% of the entire student body go home each week-end. A few students live in or near Vinton and attend the school during the day and go home each night. All students are required to go home for Thanksgiving, Christmas, Easter and summer vacations. The parents and the staff have formed an active PTA which has been functioning for several years and has made a number of valuable contributions to the various programs of the school.

In order to meet its primary purpose of providing an academic program for its students which compares favorably with the programs found in the better public schools in the state, the school offers a complete

The need for the development of efficient social skills is constantly kept in mind. Such activities as parties, clubs, scouting, student council, church activities, music and athletics play an important role in helping the students develop acceptable social skills and a wellrounded personality.

Every effort is made to insure the good health and the proper eye care of the students. The school's infirmary is covered by a nurse twenty-four hours a day. A local physician holds a daily clinic and is always available in case of emergencies. An ophthalmologist from the University makes regular visits to the school and examines the eyes of all of the students, and the facilities of the University Hospitals are available to all students who require special medical care.

RECENT IMPROVEMENTS

During the last few years there have been a number of improvements made at the school:

The gymnasium portion of the Physical Education Building has been completed and equipped; the Children's Cottage has been enlarged, redecoraged and refurnished; a complete fire protection system has been installed which includes sprinklers in the Main Building and the Children's Cottage, fire detection systems in both the Boys' Dormitory and in Palmer Hall and the addition of fire escapes on a number of buildings; the main kitchen has been completely remodeled and re-equipped; the heating plant has been renovated; the entire Main Building has been tuckpointed and the west side of the roof has been reshingled; most of the dormitories have been redecorated and equipped with new furniture and new draperies; a salary schedule for teachers which is competitive with the regular public schools has been developed; provisions have been made to employ such additional specialists as a guidance counselor, a social worker, a mobility instructor, a part-time speech therapist and a teacher trained to work with the multiple-handicapped blind child. Some of these specialists have been hired. The remainder will be hired when qualified people are found. The curriculum has been revised and upgraded, and a substantial amount of new equipment and additional supplies has been purchased.

FUTURE NEEDS

Except for the plumbing in the Main Building which is in poor condition and needs extensive repair, the general condition of the physical plant is quite good. A bowling alley addition to the Physical Education Building is needed so that bowling can be added to the program. Adequate operating funds are needed to support the salaries of the staff and to meet the various other financial requirements of the school.

Basically, both the educational program and the physical plant are in excellent condition, and the school is in a good position to continue to provide outstanding educational services to the visually-limited children of Iowa.

BIENNIAL REPORT

Period Ending June 30, 1964

IOWA SCHOOL FOR THE DEAF - REPORT OF SUPERINTENDENT

REPORT OF LLOYD E. BERG, SUPERINTENDENT

Lloyd E. Berg

THE OBJECT OF THE IOWA SCHOOL FOR THE DEAF

This objective pre-supposes that the child's education shall be as individual in character as the school is reasonably able to afford. This means that each child, entrusted to the care of the school, shall receive training suitable to and commensurate with his capabilities.

It is well to re-emphasize, from time to time, the objective toward which the school organization is working.

The object of the Iowa School for the Deaf is to promote a thorough

Primary Hall unit, where they are surrounded with an oral atmosphere. Instruction is continued orally for three years, until the oral habit is well founded, if the pupil is amenable to this habit.

The physical needs of these children are cared for down to the smallest detail by a corps of selected counselors under the direction of a competent housemother. Their schoolroom training is given by a staff of special teachers directed by a principal.

By the careful development of this unit, the school was able to reduce the average entrance age from fourteen years in 1921 to between six and seven years. Records are on file of a number of deaf children of pre-school age, with whom the State Field Worker is able to make contact, advise parents, and in general aid in the preparation for school so essential to the conservation of time during the formative years.

The work in Primary School covers elementary instruction largely in in speech and language so that on entering the school proper the children are able to take first grade work or better, of the public school.

AURICULAR TESTS AND TRAINING

The hearing of each pupil is carefully tested with a pure tone audiometer soon after entrance and frequently thereafter. If the percentage of residual hearing revealed by these tests is enough to encourage efforts to develop that hearing, provision is made to do so through the use of group and individual hearing aids. The school now has twentynine complete units of ten outlets each. The cost of these instruments is high, but every effort is being made to provide enough units to take care of all the pupils who have usable hearing. About one hundred thirtyfive parents have provided their children with individual hearing aids. The school employs a clinical audiologist.

A trained pianist comes to the school daily to help conduct the rhythm exercises for the younger pupils. It is believed that these rhythm exercises assist the deaf child to acquire more flexibility in his speech.

HIGH SCHOOL DEPARTMENT

The instruction throughout the academic department is given orally and in writing for those pupils able to profit by oral methods. Experience indicates some pupils need the use of finger spelling to make reasonable progress and a few manual alphabet classes are provided as required.

The course of study includes a systematic development of mathematics, language, social and natural sciences, composition, reading and speech and speech reading. This course of study comprises a total of thirteen years, three of which are spent in preparatory work. A diploma is awarded to those pupils who have fulfilled the requirements of the school course of study. This embraces a full elementary and secondary training with considerable emphasis on industrial arts training.

education for children between the ages of five and nineteen who are too deaf to be properly instructed in the public schools of the state.

The final test of the school's effectiveness shall be found in how well the child assumes responsibilities of citizenship that are rightfully his. Specifically, the object is:

- 1. To develop boys and girls who are self-supporting.
- 2. To teach boys and girls how to conduct a successful home life.
- To teach boys and girls fundamental skills involved in normal living.
- 4. To teach an intelligent use of leisure time.
- 5. To teach social concepts consistent with good citizenship.
- 6. To produce boys and girls healthy in mind, body and spirit.
- To provide opportunities for qualified pupils to obtain a higher education.

HISTORY

The Iowa School for the Deaf was founded in 1855 and was first located at Iowa City and then moved to Council Bluffs in 1870. In 1902, fire completely destroyed the main building, which housed the executive quarters and dormitories for pupils. A substantial fireproof structure now stands in its place, where sufficient room is provided for 375 pupils. The school represents a capital investment for the State of \$1,179,510.24 and occupies 200 acres, with twelve fine buildings and beautiful grounds. There is a separate building to accommodate ninety of the youngest pupils. The school affords an education for the children of the state, too deaf to make proper progress in the hearing school. The entrance age is five and students are required to remain in school until nineteen years of age, unless excused for a good cause.

PRIMARY SCHOOL

Small children, upon first entering the school, are housed in the

Special opportunities are provided for all boys and girls in the form of supervised play. This is in addition to the regular athletic program. Thus considerable interest is developed in such activities as volley ball, soft ball, table tennis and bowling, and the like.

Frequently, various members of the faculty sponsor assembly programs for the pupils. These programs are educational in nature, designed to be informative, and to develop character traits. Movies, both of an educational and entertainment nature, are held from time to time. Films are available for the classroom use by those teachers requesting them.

VOCATIONAL TRAINING

Rounding out its program of training the deaf for active citizenship, the Iowa School offers extended facilities for developing the aptitudes of both boys and girls in some of the occupations most suited to them which is under the direction of an experienced principal. The school aims to train in workmanlike habits, in character, and in appreciation of good workmanship. The instruction is shaped to lay a good foundation in the fundamentals of a particular trade or occupation.

In this department, as in the academic department, credits are given for acceptable performance, or withheld if the students' performance does not come up to the requirements. Thus the vocational training credits definitely are required for graduation from the school.

Valuable practice for the pupils is obtained in caring for the needs of the school community. The baking classes make all the bread, cake and pastries served. The shoe repairing classes attend to the mending of the pupils' shoes. The book bindery classes repair and rebuild both text and library books. This class cooperates with the printing class in making up the school catalogue.

In the printery, three linotypes are provided for instructional purposes, and the older pupils become proficient in their operation. A complete outfit of miscellaneous equipment and a variety of presses are provided, including a self-feeding unit.

The advanced classes in cabinet-making do remarkably fine work,

turning out excellent furniture which is in use all over the school. The upholstering classes also contribute many fine pieces for use in the parlors and offices.

A course in general shop instructs the pupils, both girls and boys, in the operation involved in leathercraft, woodworking and metal work. This is an introductory course.

A modification of the advanced course permits students not desiring to prepare themselves for college to take extra vocational training, and in some cases full time work in this department.

The general policy of the school is to give every girl basic training in the art of homemaking, in its various branches. If possible, training in some bread-winning occupation is also given to each girl.

A careful check is made of each pupil's development in this department on the basis of such qualities as speed, accuracy, self-reliance, industry, thrift, dependability, punctuality, cooperation, courtesy and neatness. The grading system is based upon the pupil's development of these qualities so essential to character. Therefore, vocational training in this school means considerably more than the development of skilled hands.

MORAL INSTRUCTION

Moral and religious training is provided, of a general character

acceptable to all churches and creeds. Sunday School is held every Sunday morning in graded classes conducted by the regular teachers. At times, assemblies are held when some member of the faculty gives a talk intended to strengthen character. Whenever parents request it, pupils are allowed to attend churches named by the parents in the city. Ministers of the various denominations are welcomed to conduct special services at the school for their special groups. Visiting ministers frequently are invited to address all the pupils in the main auditorium.

THE SOCIAL LIFE OF THE COMMUNITY

Pupils enjoy a varied social life such as might be expected in any large boarding school. General parties attended by pupils and teachers, directed by faculty committees, are held on all special occasions and holidays. Smaller groups have frequent socials. A number of clubs and activity groups hold frequent meetings. These occasions supply the opportunity to teach manners and social customs.

Picnics and trips to nearby places of interest, theater parties and class trips of an educational nature are frequently arranged. Winter sports are a popular diversion. Extensive playgrounds enable the boys and girls to be out of doors for healthful games and pastimes during the fall and spring months.

State Sanatorium

Oakdale

BIENNIAL REPORT

Period Ending June 30, 1964

STATE SANATORIUM - REPORT OF SUPERINTENDENT

REPORT OF WILLIAM M. SPEAR, M. D., SUPERINTENDENT

W. M. Spear

The State Sanatorium is located at Oakdale, six miles west of Iowa City just off highway 218, on 555 acres of farm land. In 1908 the sanatorium was established and was governed until 1947 by the State Board of Control. The 52nd General Assembly enacted a law which changed its supervision to the State Board of Education, now known as the State Board of Regents. Importance of outpatient treatment has increased in recent years because of shortened periods of sanatorium care since the advent of chemotherapy. Daily clinics for these outpatients and referred new cases are held.

Whatever the future may hold for the Sanatorium, its service for the past 56 years has permitted the isolation and care of almost 19,000 inpatients with a communicable and devastating disease, has prevented the transmission of the disease to thousands of others, and has restored thousands to community and family who are again capable of leading healthful and useful lives.

REHABILITATION

Services offered by the sanatorium to the disabled are occupational therapy with its several areas of handcrafts; the library; and entertainment furnished by neighboring cities and towns through their organizations. The State Division of Vocational Rehabilitation provides a resident counsellor for their unit at Oakdale and instructors in woodworking, upholstery, business skills and homemaking. They assist us in giving the ambulatory patient every opportunity to return to his normal way of life; in many cases to better themselves in their chosen work or to take up a new vocation in keeping with the patient's disease.

Expert testing of patients' aptitudes, intelligent counselling as to future vocational possibilities, job placement and the important follow-up are integral parts of the total "Rehab." Program. This service is provided gratis to all those who meet the qualifications.

SANATORIUM'S TEACHING FUNCTION

More and more classes of student nurses from Waterloo, Davenport, Dubuque, Marshalltown, Cedar Rapids and Iowa City training schools come to the sanatorium for field trips every month of the year. Dental hygienists come in groups from University of Iowa college of dentistry each week; public health nursing trainees, graduate students in pharmacy and hospital administration, medical students, residents from the departments of internal medicine and otolaryngology spend some of their training period at the sanatorium, sometimes only for lectures and a tour, at other times for a stated period.

167

BUILDINGS

During the biennium the extension of service building 49 was completed and is not only utilitarian but an attractive addition.

Just before the biennium came to an end - on June 2, 1964 - a herd disposal sale was held with a total of 163 head of Holsteins being sold at auction. The farm is to be rented in 1965.

PERSONNEL

Dr. D. R. Webb, who had been on our medical staff for a period of 26 years, retired as of June 1, 1964 after faithful service. We were fortunate to find an excellent replacement for the vacancy in the superintendent and medical director of the state sanatorium of North Dakota. Naturally there have been several other long time employees who have reached retirement age, necessitating replacements.

CARE OF PATIENTS

The use of modern medical treatment along with initial periods of bed rest has continued as in other sanatoria. Resectional surgery is employed in many cases which necessitates a longer stay for the patient. Studies of age and sex remain about the same; more than twice as many male patients as female and the average age around 57 years. Many of the men patients are unmarried, have been wanderers, irregularly employed and poorly adjusted individuals with a certain percentage of them being alcoholics. Present day diagnostic complications are those usually seen in the older age groups such as arthritis, malignancies and cardiovascular diseases. There are many chronic patients actually being isolated for active tuberculosis which will probably never become inactive. REPORT OF STATE BOARD OF REGENTS
