# | Executive Summary

## EXECUTIVE SUMMARY

### Overview

This plan was developed to assist the City of Monona in managing its urban forest, including budgeting and future planning. Trees bring numerous benefits to a community, and sound management helps leaders take advantage of these benefits. Management is especially important now considering the serious threats posed by forest pests like the emerald ash borer (EAB). EAB is an invasive insect imported from Eastern Asia on wood shipping crates that kills all species of ash trees except mountain ash. There is a strong possibility that 9% of Monona's city-owned trees will die once EAB becomes established in the community, unless local leaders begin preventative treatment. With proper planning and management, the costs of removing dead and dying trees can be extended over years, mitigating public safety issues.

### Inventory and Results

In 2022, JEO conducted a tree inventory using Global Positioning System (GPS) data collectors. The inventory was a complete inventory of street and park trees. Below are some key findings of the 286 trees inventoried.

- Monona trees provide \$45,149 of benefits annually, an average of \$158 per tree
- There are over 34 species of trees
- The top three genera are: Maple 48%, Apple 22%, and Ash 9%
- 9% of trees need some type of management
- 10 trees should be removed

### Recommendations

We detail our core recommendations in the Recommendations Section. In the Emerald Ash Borer Plan, we include management recommendations. Below are some key recommendations.

- Out of the 10 trees needing removal, 3 trees are over 24 inches in diameter at 4.5 ft and must be addressed immediately. [\\*City ownership of the trees recommended for removal should be verified prior to any removal\\*](#)
- 12 of the 24 ash trees should be carefully examined, as they have one or more symptoms that could be related to an EAB infestation.
- All trees should be pruned on a routine schedule: one third of the city every other year.
- Plant a diverse mix of trees that do not include: ash, maple, cottonwood, poplar, box elder, Chinese elm, evergreen, willow or black walnut.
- Check ash trees yearly with a visual survey.
- With the current budget it could take 2 years to remove ash. We suggest that city officials request a budget increase to \$12,000 annually and apply for grants to plant replacement trees.

# Introduction

## INTRODUCTION

This plan was developed to assist Monona with managing, budgeting, and future planning of their urban forest. Across the state, forestry budgets continue to decrease as a higher percentage of the budgets are devoted to tree removal. With the anticipated arrival of Emerald Ash Borer (EAB), an invasive pest that kills native ash trees, it is time to prepare for the increased costs of tree removal, treatment, and replacement planting. With proper planning and management of the current canopy in Monona, these costs can be spread out over the years and public safety issues from dead and dying ash trees can be mitigated.

Trees are an important part of Monona's infrastructure and one of the city's greatest assets. The benefits of trees are immense. Trees improve air quality, intercept stormwater runoff, conserve energy, lower traffic speeds, increase property values, reduce crime, improve mental health, and create a desirable place to live, to name just a few. Good urban forestry management will maintain these important benefits for the people of Monona and future generations.

Urban forestry management sets goals and develops management strategies to achieve them. To develop management strategies, a comprehensive public tree inventory must be conducted. The inventory informs maintenance, removal schedules, tree planting, and budgeting. Aligning management actions with the tree inventory results will help meet Monona's urban forestry goals.

**Assist Monona  
with Managing  
its Urban Forest**

**Inform on the  
Benefits of a  
Healthy Urban  
Forest**

**Establish  
Preventative  
Treatment for  
Emerald Ash Borer**

**Develop Efficient  
City Tree  
Management  
Techniques**

**Mitigate Public  
Safety Issues**

# | Findings

## INVENTORY

---

In 2022, JEO conducted a tree inventory that included 100% of the city-owned trees on both streets and parks. The team collected tree data using a handheld Global Positioning System (GPS) receiver. The data collector gives Geographic Information Systems (GIS) coordinates with an accuracy of 3 meters, which can be used in Arc GIS as an active GIS data layer. Because the inventory is a digital document the data can be updated with new information and become a working document.

The data collectors' programming was written to be compatible with a state-of-the-art software suite called i-Tree. i-Tree was developed by the USDA Forest Service to quantify the structure of community trees and the environmental services that trees provide. The i-Tree suite is a public domain which can be accessed for free.

To quantify the urban forest structure and benefits, specific data is collected for each tree. This data includes: location, land use, species, diameter at 4.5 ft, recommended maintenance, priority of that maintenance, leaf health, and wood condition. Additionally, for all ash trees, the team notes signs and symptoms associated with EAB including canopy dieback, epicormic shoots, bark splitting, D-shaped borer exit holes, and wood pecker damage.

## INVENTORY RESULTS

---

JEO entered the data collected for the 286 city trees into the USDA Forest service program Street Tree Resource Analysis Tool for Urban forestry Management as part of the i-Tree suite. Following are results from the i-Tree STREETS analysis.

## ANNUAL BENEFITS

---

### **Annual Energy Benefits**

Trees conserve energy by shading buildings and blocking winds. Monona's trees reduce energy-related costs by approximately \$12,130 annually (Appendix A, Table 1). These savings are both in electricity (57.2 MWh) and in natural gas (7,947.3 Therms).

### **Annual Stormwater Benefits**

Monona's trees intercept about 592,536 gallons of rainfall or snow melt per year (Appendix A, Table 2). This interception provides \$16,058 in benefit to the city.

## Annual Air Quality Benefits

Air quality is a persistent public health issue in Iowa. The urban forest improves air quality by removing pollutants, lowering air temperature, and reducing energy consumption, which in turn reduces emissions from power plants, and lessens emissions of volatile organic matter (ozone). In Monona, it is estimated that trees remove 748 lbs of air pollution (ozone (O<sub>3</sub>), particulate matter less than 10 microns (PM<sub>10</sub>), carbon monoxide (CO), nitrogen dioxide (NO<sub>2</sub>), and sulfur dioxide (SO<sub>2</sub>)) per year with a net value of \$2,113 (Appendix A, Table 3).

## Annual Carbon Benefits

Carbon sequestration and storage reduce the amount of carbon in the atmosphere, mitigating climate change. In Monona, trees sequester about 129,678 lbs of carbon per year with an associated value of \$973 (Appendix A, Table 5). In addition, the trees store 2,225,401 lbs of carbon, with a yearly benefit of \$16,691 (Appendix A, Table 4).

## Annual Aesthetics Benefits

The social benefits of trees are hard to capture. The i-Tree analysis does have a calculation for this area that includes aesthetic value, property values, lowered rates of mental illness and crime, city livability and much more. Monona receives \$13,241 in annual social benefits from trees (Appendix A, Table 6).

## Financial Summary of All Benefits

According to the USDA Forest Service i-Tree STREETS analysis, Monona's trees provide \$45,149 of benefits annually. Benefits of individual trees vary based on size, species, health and location, but on average each of the 286 trees in Monona provide approximately \$158 annually (Appendix A, Table 7).

| ENERGY  | STORMWATER   | AIR QUALITY   | CARBON  | AESTHETICS   | SUMMARY   |
|---|--|---|---|--|---|
| <ul style="list-style-type: none"> <li>Reduce energy cost by <b>\$12,130</b></li> </ul> | <ul style="list-style-type: none"> <li>Intercept <b>592,536 gallons</b></li> <li>Provides <b>\$16,058</b> benefit</li> </ul> | <ul style="list-style-type: none"> <li>Remove 748 <b>lbs</b> of pollution</li> <li>Net value of <b>\$2,113</b></li> </ul> | <ul style="list-style-type: none"> <li>Sequester <b>129,678 lbs</b></li> <li>Value of <b>\$973</b></li> <li>Store 2,225,401 <b>lbs</b></li> <li>Value of <b>\$16,691</b></li> </ul> | <ul style="list-style-type: none"> <li><b>\$13,241</b> in social benefits</li> </ul> | <ul style="list-style-type: none"> <li><b>\$45,149</b> annual benefits</li> <li>Each tree provides <b>\$158</b> annually</li> </ul> |

## FOREST STRUCTURE

### Species Distribution

Monona has over 34 different tree species along city streets and parks (Appendix A, Figure 1).

The distribution of trees by genera is as follows:

|                 |     |     |             |   |     |
|-----------------|-----|-----|-------------|---|-----|
| Maple           | 138 | 48% | Cedar       | 3 | 1%  |
| Apple           | 63  | 22% | Walnut      | 3 | 1%  |
| Ash             | 25  | 9%  | Hackberry   | 2 | <1% |
| Basswood/Linden | 16  | 6%  | Birch       | 1 | <1% |
| Locust          | 13  | 5%  | Catalpa     | 1 | <1% |
| Oak             | 11  | 4%  | Coffee Tree | 1 | <1% |
| Other Deciduous | 6   | 2%  | Pine        | 1 | <1% |
| Lilac           | 5   | 2%  | Redbud      | 1 | <1% |
| Cottonwood      | 4   | 1%  | Spruce      | 1 | <1% |

### Age Class

Most of Monona's trees (25%) are between 6 and 12 inches in diameter at 4.5 ft (Appendix A, Figure 2).

To prepare for natural mortality and to maintain canopy cover, most trees should be in the smallest size category (a downward slope), indicating youth. Monona's size curve is on the smaller side, indicating a younger than average stand.

### Condition: Wood and Foliage

Both wood condition and leaf condition are good indicators of the urban forest's overall health. The foliage condition results for Monona indicate that 93% of the trees are in good health, with only 5% of the foliage in poor health, dead, or dying (Appendix A, Figure 3 & Appendix B, Figure 3). Similarly, 80% of Monona's trees are in good health for wood condition (Appendix A, Figure 4 & Appendix B, Figure 3). Seven percent of the tree population's wood condition is in poor health, dead, or dying. This 7% is an estimate of trees that need management follow up.

## Management Needs

The following outlines the specific management needs of the street and park trees by number of trees and percent of canopy (Appendix B, Figure 3).

| Action          | Number of Trees | Percentage |
|-----------------|-----------------|------------|
| Crown Cleaning  | 14              | 5%         |
| Tree Removal    | 10              | 4%         |
| Crown Reduction | 0               | 0%         |
| Crown Raising   | 0               | 0%         |
| Tree Staking    | 0               | 0%         |

## Canopy Cover

The total canopy with both private and public trees is 92 acres or 12% cover. The canopy cover included in the Monona inventory includes approximately 6.5 acres (Appendix A, Figure 4). The city's canopy goal is to increase canopy by 10% in 30 years. To achieve this goal it is estimated that 7 trees need to be planted annually on public and private lands.

## Land Use and Location

The majority of Monona's city and park trees are in planting strips in single family residential neighborhoods (Appendix A, Figure 6 & Appendix A, Figure7). The following describes the land use and locations for the street and park trees.

| Land Use                    | Percentage |
|-----------------------------|------------|
| Single Family Residential   | 82%        |
| Industrial/Large Commercial | 5%         |
| Park/Vacant/Other           | 5%         |
| Small Commercial            | 5%         |
| Multifamily Residential     | 2%         |

# Recommendations

## RECOMMENDATIONS

---

### Risk Management

Hazardous trees can be a significant threat to both people and property. Trees that are dead, dying, or have large issues such as trunk cracks longer than 18 inches should be removed. Broken branches and branches that interfere with motorists' vision of pedestrians, vehicles, traffic signs and signals should be removed.

#### HAZARDOUS TREES

Monona has 4 critical concern trees that need immediate removal. These trees can be seen on the Location of Trees with Recommended Maintenance Map (Appendix B, Figure 4). We recommend starting with the large-diameter, critical concern trees first. There is 1 tree over 24 inches in diameter at 4.5 ft that should be addressed immediately. Please refer to the Six-Year Maintenance Plan at the end of this section. After all of the critical concern trees are addressed, there should be follow up on the trees marked as needing maintenance. There are a total of 14 trees with maintenance needs.

#### POOR TREE SPECIES

After removing the critical concern trees, ash trees in poor health should be assessed for removal (Appendix B, Figure 3 & Appendix B, Figure 4). Of the 10 removals, 9 are ash trees. There are a total of 25 ash trees, and 12 of those have signs and symptoms that have been associated with EAB. In addition, there are 6 trees that are in poor health. *\*City ownership of the trees recommended for removal should be verified prior to any removal\**

### Pruning Cycle

Proper pruning can extend the life and good health of trees, as well as reduce public safety issues. In the Management Needs section of the Findings there are four main maintenance issues to be addressed: routine pruning, crown cleaning, crown raising, and crown reduction. Crown cleaning removes dead, diseased, and damaged limbs. Crown raising removes lower branches that are two inches in diameter or larger to provide clearance for pedestrians or vehicles. Crown reduction removes individual limbs from structures or utility wires. We recommend that all trees be pruned on a routine schedule every five to seven years. Please refer to the Six Year Maintenance Plan for further information.

### Planting

Most of the planting over the next five years will replace the trees that are removed. We recommend planting 1.2 trees for every tree removed, since survival rates will not be 100%. It is not essential that the new trees be planted in the same location of the trees being removed. However, maintaining the same number of trees helps ensure continuation of the benefits of the existing forest in Monona.

It is important to plant a diverse mix of species in the urban forest to maintain canopy health, since most insects and diseases target a genus (ash) or species (green ash) of trees. Current diversity recommendations advise that a genus (i.e. maple, oak) not make up more than 20% of the urban forest and a single species (i.e. silver maple, sugar maple, white oak, bur oak) not make up more than 10% of the total urban forest. Presently, the forest is heavily planted with maple (48%) (Appendix A, Figure 1). Maples should not be planted until this percentage can be lowered. Also, ash trees have not been recommended since 2002, due to the threat of EAB. Other species to avoid because they are public nuisances include: crabapple, Japanese Lilac, serviceberry, oak (red, white), hackberry, linden, elm (disease resistant), cork, London plane, ironwood hornbeam as outlined in section 151.02 of the city ordinance (Appendix C). All trees planted must meet the restrictions in city ordinance 151.02 (Appendix C).

## Continual Monitoring

Due to the threat of EAB, it is important to continuously check the health of ash trees. We recommend that ash trees be checked with a visual survey every year for tree decline and for the following signs and symptoms: canopy dieback, epicormic shoots, bark splitting, D-shaped borer exit holes, and wood pecker damage.

## EMERALD ASH BORER PLAN

### Ash Tree Removal

Tree removal will be prioritized by first removing dead, dying, hazardous trees (Appendix B, Figure 4). Next will be all ash in poor condition that display EAB signs and symptoms (Appendix B, Figure 2 & Appendix B, Figure 3).

*\*City ownership of the tree recommended for removal should be verified prior to any removal\**

### Treatment of Ash Trees

Chemical treatment can be an effective tool for communities to spread removal costs out over several years while allowing trees to continue providing benefits. However, treatment is not recommended if EAB is more than 15 miles away from the community. For more information on the cost of treatment strategies visit <http://extension.entm.purdue.edu/treecomputer/>

## EAB Quarantines

EAB is an extremely destructive plant pest and it is responsible for the death and decline of millions of ash trees. Ash in both forested and urban settings constitute a significant portion of the canopy cover in the United States. Current tools to detect, control, suppress and eradicate this pest are not as robust as the USDA would desire. In order to stay ahead of this hard to detect beetle, the USDA is attempting to contain the beetle before it spreads beyond its known positions by regulating articles.

A regulated article under the USDA's quarantine includes any of the following items:

- emerald ash borer
- firewood of all hardwood species (for example ash, oak, maple and hickory)
- nursery stock and green lumber of ash
- any other ash material, whether living, dead, cut or fallen, including logs, stumps, roots, branches, as well as composted and not composted chips of the genus ash (Mountain ash is not included)

In addition, any other article, product, or means of conveyance not listed above may be designated as a regulated article if a USDA inspector determines that it presents a risk of spreading EAB once a quarantine is in effect for your county.

## Wood Disposal

A very important aspect of planning is determining how wood infested with EAB will be handled, keeping in mind that quarantines will restrict its movement. Consider who will cut and haul the dead and dying trees? Is there an accessible, secured site big enough to store and sort the hundreds of trees and the associated brush and chips? How will wood be disposed of or utilized? Do you have equipment capable of handling the amount and size of ash trees your tree inventory has identified? Once your county is under quarantine for EAB, contact USDA-APHIS-PPQ at 515-251-4083 or visit the website [http://www.aphis.usda.gov/plant\\_health/plant\\_pest\\_info/emerald\\_ash\\_b/regulatory.shtml](http://www.aphis.usda.gov/plant_health/plant_pest_info/emerald_ash_b/regulatory.shtml). Wood waste can be normally disposed of if your county is not part of a quarantine.

## Canopy Replacement

As budget permits, all removed trees will be replaced. All trees will meet the restrictions in city ordinance 151.02 (Appendix C). The new plantings will be a diverse mix and will not include crabapple, Japanese Lilac, serviceberry, oak (red, white), hackberry, linden, elm (disease resistant), cork, London plane, ironwood hornbeam.

## Postponed Work

While finances, staffing, and equipment are focused on the management of ash, usual services may be delayed. Tree removal requests on genera other than ash will be prioritized by hazardous or emergency situations only.

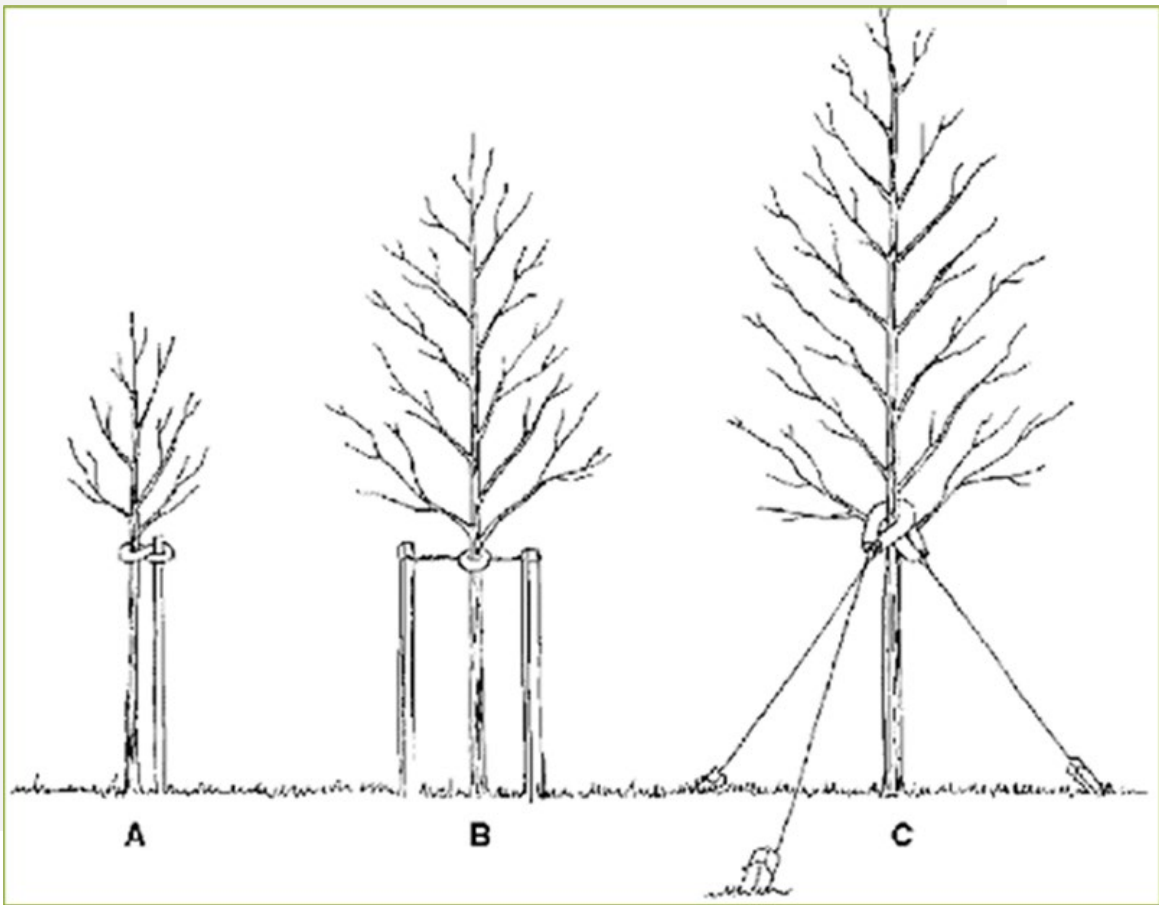

## Monitoring

It is recommended that ash trees be checked with a visual survey every year for tree death and for EAB signs and symptoms including canopy dieback, epicormic shoots, bark splitting, D-shaped borer exit holes, and wood pecker damage.

## Private Ash Trees

It is strongly recommended that private property owners start removing ash trees on their property upon arrival of EAB if preventative treatments are not being used. City Code 151.03 states “A property owner may remove a tree that is on personal property as long as the property owner does the actual work. Otherwise, the property owner must hire a licensed tree surgeon to remove the tree.”

# | Schedule & Budget

## PROPOSED WORK SCHEDULE & BUDGET

Budget Allowance of \$11,000/Year – (Based off Reported Yearly Tree Budget)

| YEAR 1  | Est. Cost       | YEAR 4                              | Est. Cost       |
|---|-----------------|-------------------------------------|-----------------|
| Remove 5 trees recommended for immediate removal          | \$3,500         | Possible Removal (5 trees)          | \$3,500         |
| Remove 5 ash trees in poor condition                      | \$3,500         | Plant 40 trees in open locations    | \$6,000         |
| Plant 20 trees in open locations                          | \$3,000         | Prune 1/3 of city owned trees       | \$1,430         |

| Plant 46 trees in open locations    | \$6,900         | Plant 23 trees in open locations    | \$3,450         |
| Visual Survey of EAB Signs/Symptoms | n/a             | Prune 1/3 of city owned trees       | \$1,430         |
| <b>TOTAL</b>                        | <b>\$11,800</b> | Visual Survey of EAB Signs/Symptoms | n/a             |
|                                     |                 | <b>TOTAL</b>                        | <b>\$11,880</b> |

### Purposed Budget Increase

EAB could potentially kill all ash trees in Monona within four years of its arrival. With the current budget all ash trees can be removed within 3 years. Additionally, we recommend that Monona apply for grants to fund replacement trees. Utility Company grants are usually between \$500

and \$10,000 for community-based, tree-planting projects that include parks, gateways, cemeteries, nature trails, libraries, nursing homes, and schools.

Another option considered by many communities is treating selected trees, either to maintain those trees in the landscape or to delay their removal – to spread out the costs and number of trees needing removal all at once. Trunk injection is administered every two years for the life of the tree. If treatment is discontinued, the tree dies. For instance, in this treatment scenario, the average ash diameter is 20 inches and at \$15 per inch, about 6 trees could be treated per year (every other year treatment), if there are 12 treatable trees, it would cost approximately \$1,800 a year for treatment and leave \$9,200 for removal. These are alternatives to straight removal of ash trees. However, whether or not the treatment option is selected, there will be an increased cost of dealing with ash trees if EAB is found in Monona. We suggest considering an increased budget to plan for this.

The value of stored carbon dioxide is calculated as the total amount of carbon dioxide sequestered annually over the life of each tree, summed for the population. This value should not be added to the Replacement Value or double-counting of the carbon dioxide storage benefit will occur.

**Table 5: Annual Carbon Sequestered**

# Monona

## Annual CO<sub>2</sub> Benefits of Public Trees

2/7/2023

## APPENDIX C: MONONA TREE ORDINANCES

---

### CHAPTER 151

### TREES

151.01 Definition 151.03 Disease Control

151.02 Planting Restrictions 151.04 Inspection and Removal

151.01 DEFINITION. For use in this chapter, “parking” means that part of the street, avenue or highway in the City not covered by sidewalk and lying between the lot line and the curb line; or, on unpaved streets, that part of the street, avenue or highway lying between the lot line and that portion of the street usually traveled by vehicular traffic.

151.02 PLANTING RESTRICTIONS. No tree shall be planted in any parking or street except in accordance with the following:

1. Alignment. All trees planted in any street shall be planted in the parking midway between the outer line of the sidewalk and the curb. In the event a curb line is not established, trees shall be planted under the supervision and approval of the Public Works Director.
2. Spacing. Trees shall not be planted on any parking which contains less than eighty-one (81) square feet of exposed soil surface per tree. Trees shall not be planted closer than twenty (20) feet from street intersections (property lines extended) and ten (10) feet from driveways. If it is at all possible trees should be planted inside the property lines and not between the sidewalk and the curb.
3. Prohibited Trees. No person shall plant in any street any fruit-bearing tree or any tree of the kinds commonly known as cottonwood,

poplar, box elder, Chinese elm, evergreen, willow or black walnut.

151.03 DISEASE CONTROL. Any dead, diseased or damaged tree or shrub which may harbor serious insect or disease pests or disease injurious to other trees is hereby declared to be a nuisance.

151.04 INSPECTION AND REMOVAL. The Council shall inspect or cause to be inspected any trees or shrubs in the City reported or suspected to be dead, diseased or damaged, and such trees and shrubs shall be subject to the following:

1. City Property. If it is determined that any such condition exists on any public property, including the strip between the curb and the lot line of private property, the Council may cause such condition to be corrected by treatment or removal. The Council may also order the

## CHAPTER 151 TREES

### CODE OF ORDINANCES, MONONA, IOWA

- 610 -

removal of any trees on the streets of the City which interfere with the making of improvements or with travel thereon.

2. Private Property. If it is determined with reasonable certainty that any such condition exists on private property and that danger to other trees or to adjoining property or passing motorists or pedestrians is imminent, the Council shall notify by certified mail the owner, occupant or person in charge of such property to correct such condition by treatment or removal within fourteen (14) days of said notification. If such owner, occupant or person in charge of said property fails to comply within fourteen (14) days of receipt of notice, the Council may

cause the condition to be corrected and the cost assessed against the property.

(Code of Iowa, Sec. 364.12[3b & h])
